45270 (EPRI-EA—2273, pp 2) **Evaluation of the effects of acid precipitation on forest ecosystems using microcosm simulators: joint project TVA-ORNL.** Strickland, R.C.; Kelly, J.M.; Edwards, N.T. 1981. NTIS, PC A05/MF A01. File Number DE82903148. (CONF-8103126—).

From Ecological effects of acid precipitation conference; Atlanta, GA, USA (4 Mar 1981).

Twenty forest microcosms were established to evaluate the effect of simulated acid rain on: (1) plant nutrient content and foliar leaching rates; (2) leaf morphological and physiological responses; (3) decomposition rates in litter and mineral soil; and (4) leaching rates of soil nutrients. Each microcosm consisted of a 1.2-m^2 box containing a reconstructed soil profile which supports two tulip poplar, two Virginia pines, and two white oak trees and associated litter. Microcosms were arranged in groups of four under five shelters (replications) which had sliding roofs designed to cover the microcosms during natural precipitation events. At other times, the microcosms were exposed to the ambient environment. Treatments were applied weekly through sprayers located under the shelter roofs. Microcosms under each shelter received one of four different pH levels of simulated acid rain. These treatments were calculated to give annual weighted pH averages of 5.7 (control), 4.5., 4.0, or 3.5. Plant nutrient content was determined from foliage analysis, and foliar leaching rates were measured from throughfall collected during each treatment event. Leaf morphological differences among treatments were evaluated microscopically on foliage samples. Photosynthesis, respiration, transpiration, leaf expansion rates, and senescence were used to evaluate physiological effects.

45271 **(EPRI-EA—4203) Field air-exclusion system for measuring the effects of air pollutants on crops. Final report.** Thompson, C.R. (California Univ., Riverside (USA). Statewide Air Pollution Research Center). Aug 1985. 117p. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI85920811.

An air exclusion system was designed, constructed and tested to determine its effectiveness in plant air pollution studies. The system provided both reductions in ambient oxidants and additions of sulfur dioxide to a plant canopy. The system design included particulate and activated charcoal filters, pressure-type blowers, a mixing manifold, and perforated inflatable ducts which were positioned between rows of plants. Carbon monoxide tests indicated optimal system parameters for air exclusion including: air flow of at least 0.944 $m^3\ s^{-1}$ within the ducts, three or four rows of holes on the side of each duct pointing 45° upward, 90° to the side, and 45° downward from the center of the duct, four ducts per system, and a hole size that provided an air velocity of 0.5 to 1.8 m s^{-1} over the plant canopy. No large environmental differences were found between air exclusion systems and open top chambers versus outside plots in the summer. In the fall and winter open top chambers had higher air, leaf and soil temperatures than air exclusion systems or outside plots. Air speed over the plant canopy was higher with the air exclusion system than in open top chambers or outside plots.

Based on the previous tests a smaller model air exclusion was designed and tested for use at remote sites. This system provided for oxidant exclusions of alfalfa plants comparable to the exclusion with the fixed systems, but at lower cost and with greater flexibility for use. 36 refs., 20 figs., 48 tabs.

45272 **(PB—226314) Effects of sulfur oxides in the atmosphere on vegetation: revised chapter 5 for air quality criteria for sulfur oxides.** (Environmental Protection Agency, Research Triangle Park, NC (USA). Office of Research and Development). Sep 1973. 54p. (EPA—R3-73-030). NTIS, PC A04/MF A01.

The following subjets are addressed: symptoms of the effects of SO_2 on plants; mechanism of action; factors affecting plant response to SO_2; problems in diagnosis and assessment of the economic impact of SO_2; effects on lower organisms; acid precipitation; miscellaneous aspects of SO_2 on plants; effects on biomass and yield; and dose-response relationships to plants. 141 references, 6 tables.

45273 **Covalent binding of benzo[a]pyrene diol epoxide to DNA of mouse skin: in vivo persistence of adducts formation.** Shugart, L. (Oak Ridge National Lab., TN). *Journal of Toxicology and Environmental Health;* **15**: No. 2, 255-263(1985). Contract AC05-84OR21400.

In the first 9 d after topical application of a single dose of benzo[a]pyrene to the dorsal skin of C_3H mice, the half-lives of benzo[a]pyrene diol epoxide-DNA adducts and of DNA were determined to be approximately 5 d. These data indicate that, in proliferating mouse skin, benzo[a]pyrene diol epoxide-DNA lesions are not repaired, but are diluted from the genome at a rate equivalent to DNA turnover (i.e., replication versus degradation). Subsequent to this initial period, benzo[a]pyrene diol epoxide-DNA adduct removal continues, but at a much reduced rate. At 30 d posttreatment with benzo[a]pyrene, approximately 15% of the adducts are still detectable; however, their half-lives had increased to 30 d. Similar experiments with a hairless mouse showed that, although the amount of adduct formation was lower initially, the kinetics of aduct disappearance and persistence were essentially the same as found with the C_3H mouse. The data obtained in this work are consistent with the hypothesis that benzo[a]pyrene diol epoxide adducts persist in a subpopulation of skin cells long after their disappearance by DNA turnover would predict.

45274 **Measuring effects of air pollution stress on forest productivity: perspectives, problems, and approaches.** McLaughlin, S.B.; West, D.C.; Blasing, T.J. (Oak Ridge National Lab., TN). *Tappi;* **67**: No. 1, 74-80(Jan 1984). Contract W-7405-ENG-26.

Changing levels and patterns of emissions of atmospheric pollutants in recent decades have resulted in increased exposure of extensive forests in Europe and North America to both gaseous pollutants and acid rain. Reports of decreased growth and increased mortality of forest trees in areas receiving high rates of deposition of atmospheric pollutants have emphasized the need to better understand and quantify both the mechanisms and kinetics of potential changes in forest productivity. The complex chemical nature of combined pollutant exposures and the fact that these changes may involve both direct effects to vegetation as well as indirect and possibly beneficial effects mediated by a wide variety of soil processes make quantification of such effects particularly challenging. A variety of productivity studies in Europe and the US have been evaluated. Dendroecological approaches, which combine detailed analysis of long-term growth trends as influenced by tree age, competitive status, climatic variables, and pollutant levels, offer great promise for quantifying both the temporal and spatial relationships of productivity changes and their relationship to patterns of deposition of atmospheric pollutants. Subsequent research to delineate mechanisms of effects and simulate the long-term integrative effects of altered tree growth and soil nutrient dynamics will be required to provide a streng scientific basis for establishing cause-and-effect relationships between air pollution and changes in forest productivity. 42 references.

45275 **Comparison of experimental designs used to detect changes in yields of crops exposed to acidic precipitation.** Evans, L.S.; Thompson, K.H. (Manhattan College, Bronx, NY). *Agronomy Journal;* **76**: 81-84(Jan-Feb 1984). Contract AC02-76CH00016.

A comparison of experimental designs used to detect changes in yield of crops exposed to simulated acidic rain was performed. Seed yields were determined from field-grown soybeans (Glycine max L.) exposed to simulated rainfalls in which all ambient rainfalls were excluded by automatically moveable rainfall exclusion shelters. When all eight, 4 x 4, latin squares were used, simulated rainfalls of pH 4.1, 3.3, and 2.7 exhibited yields 10.6, 16.8, and 23.9%, respectively, below yields of plants exposed to pH 5.6. The linear component of pH treatment differences showed a highly significant decrease in yield ($p < 0.001$). The eight latin squares analyzed as individual experiments yielded erratic conclusions. However, when all eight latin squares were combined a satisfactory evaluation can be made. The low probability value for differences among latin squares ($p < 0.005$) indicates that field locations are a legitimate source of stratification. Sources of variation are also highly significant for both pooled among rows within squares ($p = 0.0028$) and the pooled among columns within squares ($p = 0.0168$) indicating that the two stratifications within each latin square was doubly effective in reducing the residual error term. The relative efficiency of the latin square to a randomized complete block design, and a completely randomized design was 132-146 and 162%, respectively.

45276 **Estimation of the frequency of malformed sperm by slit scan flow cytometry.** Halamka, J.; Gray, J.W.; Gledhill, B.L.; Lake, S.; Wyrobek, A.J. (Univ. of California, Livermore). *Cytometry (Baltimore);* **5**: 333-338(1984). Contract W-7405-ENG-48.

An investigation was made of the utility of Slit Scan Flow Cytometry (SSFCM) for measuring the frequencies of malformed sperm heads in control and mutagen treated B6C3F1/CRL mice. In SSFCM, fluorescence profiles of sperm heads stained with the DNA-specific fluorescent dye acriflavine were recorded for sperm flowing lengthwise through a 2.5-μm-thick laser beam. Malformed sperm were detected as having fluorescence profiles that differed substantially from an average fluorescence profile for sperm from untreated mice. Fluorescence profiles were measured for 500 sperm per mouse from five control mice, five mice injected intraperitoneally daily for 5 days with a total of 375 mg/kg of body weight methyl methane sulfonate (MMS), and for 30 mice injected intraperitoneally daily for 5 days with total doses of procarbazine ranging from 125 mg/kg to 1250 mg/kg. Sperm were collected from the caudae epididymides 35 days after the last injection. Frequencies of malformed sperm in these samples were also estimated by visual analysis. All samples were analyzed in double blind fashion. The visual and SSFCM malformed sperm frequencies for the samples from control, MMS-treated, and procarbazine-treated mice were correlated. A dose effect was seen with both the visual and SSFCM estimates for the sperm from the procarbazine-treated mice. 8 references 3 figures.

45277 **Effects of simulated acidic rain on yields of field-grown soybeans.** Evans, L.S.; Lewin, K.F.; Patti, M.J. (Brookhaven National Lab., Upton, NY). *New Phytologist;* **96**: 207-213(1984). Contract AC02-76CH00016.

An experiment was performed during the summer of 1982 to determine the effects of simulated acidic rain on seed yields on two commercial cultivars of soybeans grown according to standard agronomic practices. Plants were shielded from all ambient rainfalls automatically by two moveable exclusion covers and exposed to simulated rainfalls in quantities equal to the average amount of rainfall that occurs at the site. Seed yields of cv. Amsoy exposed twice weekly to simulated rain of pH 4.1, 3.3 and 2.7 were, respectively, 3.0, 9.0, and 12.8% below yields of plants exposed to simulated rain of pH 5.6. A treatment-response function of seed yield vs rainfall pH for Amsoy was $y = 10.20 + 0.587\ x$ and had a correlation coefficient of 0.96 (y is seed mass per plant and x is the pH of the simulated rain). For cv. Williams, seed yields of plants exposed to simulated rainfalls of pH 5.6, 4.1, 3.3 and 2.7 were 11.5, 10.5, 11.4 and 11.4 g, respectively. A treatment-response function of seed

yield vs rainfall pH for Williams was y = 11.13 + 0.016 x which had a correlation coefficient of 0.038. Plants of Amsoy and Williams grown in plots adjacent to the exclusion shelters had mean seed yields of 11.4 and 9.8 g per plant, respectively. Seed yield per plant was dependent upon number of pods per plant because the number of seeds per pod did not vary among treatments for each cultivar. 13 references, 1 figure, 1 table.

45278 **Effects of simulated rain acidified with sulfuric acid on host-parasite interactions.** Shriner, D.S. (Oak Ridge National Lab., TN). pp 55 of First international symposium on acid precipitation and the forest ecosystem. Columbus, OH; Ohio State University (1975). (CONF-750552—).

From 1. international conference on acid precipitation and the forest ecosystem; Columbus, OH, USA (12 May 1975).

Wind-blown rain, rain splash, and films of free moisture play important roles in the epidemiology of many plant diseases. The effects of simulated rain acidified with sulfuric acid were studied on several host-parasite systems. Plants were exposed, in greenhouse or field, to simulated rain of pH 3.2 +/- 0.1 or pH 6.0 +/- 0.2. Simulated rain of pH 3.2 resulted in: (1) an 86% inhibition in telia production of Cronartium fusiforme on Quercus phellos; (2) a 66% inhibition of reproduction of Meloidogyne hapla on field-grown Phaseolus vulgaris; (3) a 10% decrease in the severity of Uromyces phaseoli on field-grown Phaseolus vulgaris; and (4) inhibited Rhizobium nodulation of Phaseolus vulgaris and Glycine max by an average of 73%. Effects on halo blight of kidney bean (caused by Pseudomonas phaseolicola) depended upon the segment of the disease cycle in which the rain occurred: (a) simulated rain of pH 3.2 applied to plants before inoculation stimulated disease development; (b) suspension of inoculum in rain of pH 3.2 decreased inoculum potential; and (c) rain of pH 3.2 applied to plants after infection inhibited disease development. Scanning electron microscopy of epicuticular waxes on leaves of Quercus phellos and Phaseolus vulgaris showed marked erosion of those surfaces by rain of pH 3.2, indicating possible influences on the structure and function of plant cuticles. These results suggest that the acidity of rain is a new parameter of environmental concern, and underline the need for study of the consequences of prolonged exposure of both agronomic and natural ecosystems to this form of stress.

45279 **Ozone suppression of white pine net photosynthesis.** Botkin, D.B.; Smith, W.H.; Carlson, R.W. (Yale Univ., New Haven, CT). *Journal of the Air Pollution Control Association;* **21**: No. 12, 778-780(Dec 1971).

Reduction in rates of net photosynthesis following exposure to ozone was observed in eastern white pine saplings prior to the development of visible injury. Branches exposed to consecutive doses of 50-80 pphM ozone for 4 hr and 80-90 pphM ozone for 3 hr appeared to have suppressed net photosynthetic rates but results were confounded by diurnal rate variation. Photosynthetic rates of treated branches returned to normal levels following this initial ozone exposure. A second ozonation involving dosages of 90-100 pphM for 5 and 3 hr was sufficient to reduce rates of net photosynthesis by approximately 80%. 13 references, 1 figure.

45280 **(EPRI-EA—4159) Effects of 60-Hz electric fields on living plants exposed for extended periods. Final report.** (Westinghouse Electric Corp., Pittsburgh, PA (USA). Advanced Systems Technology Div.). Jul 1985. 175p. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI85920810.

The effects of intense 60-Hz electric fields were studied by exposing plants of five kinds (crops) for extended periods in a special greenhouse where cultural and environmental factors could be controlled. Plant populations and densities simulated field conditions. While exposed, plants of all crops germinated satisfactorily, and plants of sweet corn and wheat completed their life cycles and produced viable seed. Plants of alfalfa and tall fescue were at the early bloom stage when harvested. Exposure of plants of five kinds to electric fields had no statistically significant effects on seed germination, seedling growth, plant growth, phenology, flowering, seed set, biomass production, plant height, leaf area, plant survival, and nodulation. Exposure to 60-Hz electric fields resulted in very limited damage to terminal leaf tips, awns, and corn tassels, particularly at fields of 30 kV/m or greater. 47 refs., 36 figs., 44 tabs.

45281 **(EPRI-EA—4189) Design, construction, and testing of a dc bioeffects enclosure for small animals. Final report.** (Pacific Northwest Labs., Richland, WA (USA)). Jul 1985. Contract AC06-76RL01830. 180p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE85016798.

Large air-ion concentrations moving in high-strength static electric fields are unique to the environment near high-voltage dc (HVdc) transmission lines. To assess the possible biological effects of this environment, a small-animal exposure system was designed to produce well-characterized levels of the major components of the HVdc environment. Initial steps in the development of this exposure system included studies of various housing geometries and housing materials. Dielectric materials, such as plexiglass and lexan, unacceptably perturbed electric-field and air-ion environments in their vicinity; these perturbations depended on the cleanliness of the housing materials and were spatially and temporally variable. Semiconducting materials were also investigated, with satisfactory results. The final cage design employs semiconducting glass walls which span the entire space between the grounded metal-screen cage floors and the overhead high-voltage electrodes used to generate the exposure electric fields. The surface conductivity of the glass walls is controlled by a system of energized guard strips located on the outer surfaces of the walls. Electric-field strengths up to 100 kV/m and air-ion concentrations up to $10^6/cm^3$ are attainable. Initial dosimetric measurements were also performed as part of this project. The ion current collected by the body of a grounded animal was measured as a function of ion concentration and electric-field strength. The ion current collected by a live animal was observed to be significantly less than that collected by a conducting animal model of similar size and shape. This deviation appears to be due to accumulation of electric charge on the fur of exposed animals. 71 refs., 42 figs., 3 tabs.

45282 **(EPRI-CS/EL—4104) Workshop proceedings: PCB by-product formation.** Komai, R.Y.; Addis, G. (eds.). (Electric Power Research Inst., Palo Alto, CA (USA)). Jul 1985. 161p. (CONF-841269—). Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI85920731.

From PCB by-product formation workshop; Palo Alto, CA, USA (4 Dec 1984).

Fires involving PCB-filled transformers occur infrequently, but concern exists about the release of potentially toxic combustion by-products. Responding to proposed EPA regulations on PCB-filled building transformers, experts gathered to review current information on the partial-oxidation products of PCB.

45283 (RRC—55, pp 221-227) **Training programmes and experiences of medical emergency preparedness for radiation accident in Japan.** Suzuki-Yasumoto, M. (National Institute of Radiological Sciences, Chiba, Japan). 1982. NTIS (US Sales Only), MF A01. File Number DE85900956. (CONF-8111228—).

From Regional seminar for Asia and the Pacific Region - radiation emergency preparedness (health physics and medical aspects); Kalpakkam, India (30 Nov 1981).

Our policy of training programmes for medical radiation emergency preparedness is described. We found it is necessary to have two approaches to the training of relevant personnel. The first approach was to conduct adequate basic training of nurses and health physics personnel in large nuclear installations for medical radiation emergency preparedness. We found it was necessary to have courses for basic knowledge of nuclear radiation and industrial activities, radiation monitoring procedures, radiation injuries, human counters and wound monitors, first aid practices, and radiation medical emergency procedures including practices. The second approach was to make a simple and introductory training

program on the subject using lectures and visual presentations in the vicinity of big nuclear installations for personnel relating to the nuclear industrial activities and for concerned local personnel, including medical doctors and nurses. These two training courses and approaches were planned and have been conducted. 2 refs. (DT)

45284 (RRC—55, pp 230-236) **International assistance and cooperation.** Collins, H.; Bernardo, B.; Horan, J. (International Atomic Energy Agency, Vienna, Austria). 1982. NTIS (US Sales Only), MF A01. File Number DE85900956. (CONF-8111228—).

From Regional seminar for Asia and the Pacific Region - radiation emergency preparedness (health physics and medical aspects); Kalpakkam, India (30 Nov 1981).

The International Atomic Energy Agency (IAEA) has, over two years, exhibited increasing interst and activity in emergency planning and preparedness as it relates to the safety of nuclear facilities. The Agency's first formal action in this area occurred in 1959 with the establishment of the Agency's Radiation Emergency Assistance Plan. Subsequently, the Agency has published a number of documents that deal with, or are related to, emergency planning and preparedness matters. The Agency also conducted a number of symposia and conferences during these years which addressed these matters either wholly or in part. (DT)

45285 **(BRGM-RA—1982-Pt.1) Scientific and technical results of BRGM in 1982: activity analysis.** (Bureau de Recherches Geologiques et Minieres (BRGM), 45 - Orleans (France)). 1982. 79p. (In French). NTIS (US Sales Only), PC A05/MF A01. File Number DE85750558.

This book reports and analyses works carried out in 1982 by the BRGM, it presents the activities 1982 according to the different trends of research: basic research (geology, fracturation, remote detection and image processing, data bases and banks); planning (water and public service, water and research activities, hydrogeochemistry, underground storage, safety, and environment); raw materials (polymetallic sulfides and subsea hydrothermal activity, mineralizations linked to granitoid and continental hydrothermal activity, mineralizations linked to basic and ultrabasic rocks, phosphates, materials, hidden deposit detection methodology, boring valorization and aid to mining development, research on geophysical techniques, research on analytical techniques, mineral processing); and energy (solid fuels and new energies).

45286 **(BRGM-RA—1982-Pt.2) Scientific and technical results of BRGM in 1982: main results.** (Bureau de Recherches Geologiques et Minieres (BRGM), 45 - Orleans (France)). 1982. 215p. (In French). NTIS (US Sales Only), PC A10/MF A01. File Number DE85750559.

This book is a sum-up of some researches presented under a note form and presents the list of reports and publications realized during the same year 1982. The different trends of researches which are presented cover the following fields: basic research, planning, raw materials and energy (see also the BRGM-RA--1982 part 1 report).

45287 **(CONF-850775—1) Unusual occurrence of maghemite in soils developed on Knox group dolostones.** Kopp, O.C.; Lee, S.Y. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 26p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85017158.

From International clay mineral conference; Denver, CO, USA (28 Jul 1985).

Maghemite, γ-Fe_2O_3, occurred in soils developed from residuum of Knox group dolostones (Cambro-Ordovician age) along Chestnut Ridge on the US Department of Energy Oak Ridge Reservation in Oak Ridge, Tennessee. The parent dolostones in the area, although exposed to weathering, were free of maghemite and magnetite. Scanning electron micrographs and electron probe analyses indicated that the maghemite occurred in several textural types, including replaced oolites, cemented siltstones, and massive to botryoidal material. The most complex replacement by maghemite was revealed by the oolitic texture variety. Oolitic limestone was dolomitized, as revealed by the presence of numerous rhombs, during early diagenesis. During a period of silicification dolomite rhombs were replaced, and much of the remaining oolites and carbonate cements may have been partially replaced. More recently, after uplift and erosion brought these oolitic cherts into the upper weathering zone, the cherts were replaced by iron oxides. Massive chert and siltstone grains in all stages of replacement have been observed. The replacing iron in the soil solution may have originated from ferrous-ferric hydroxide, carbonate, or organic complexes. The replaced iron was converted to maghemite and hematite through dehydration and slow oxidation during pedogenesis. 17 refs., 5 figs., 1 tab.

45288 **(CONF-8508103—1) Streamflow monitoring with ultrasonic recorders.** Melroy, L.A.; Huff, D.D. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016308.

From Conference on hydraulics and hydrology in the small computer age; Orlando, FL, USA (13 Aug 1985).

In September 1983, four new streamflow monitoring sites were established in a west Chestnut Ridge catchment at the Oak Ridge National Laboratory. Ultrasonic level/flow recorders were used to monitor the streamflow at these sites. These recorders use an ultrasonic sound pulse and digital circuitry to measure the stage or flow. By use of a FROM (functional read only memory), the recorder can operate in a linear or proportional mode. In the linear mode, the data are recorded as a fraction of a predetermined maximum stage, and in the proportional mode, the data are recorded as a fraction of a predetermined maximum flow. Data are recorded on an EPROM (erasable programmable read only memory) which can later be translated using an Apple IIe microcomputer with an interface card. EPROMs are erased using an ultraviolet lamp but circular charts on the recorders provide a permanent pen and ink stage or flow record. New computer software was developed for the Apple IIe to meet the specific needs of streamflow reporting, because the available software was aimed at the water and wastewater industry and provided overly extensive reports. The new software is designed to read the EPROM and convert the hexadecimal data to decimal data, then store the data on a disk. An editing program allows the user to estimate any lost data or correct any erroneous data. A report generator computes the streamflow based on a stage-flow rating table and generates a daily summary report which provides the total flow volume, the average flow, and the daily maximum and minimum flow.

45289 **(LA-UR—85-2454) Experiments with non-Darcy flow in joints with large scale roughness.** Cornwell, D.K.; Murphy, H.D. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 11p. (CONF-8509129—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015714.

From International symposium on fundamentals of rock joints; Bjorkliden, Lapland, Sweden (15 Sep 1985).

Joints are normally in contact at roughness asperities; consequently the relative roughness, the ratio of the asperity protrusion to the mean flow aperture, is approximately one, which is orders of magnitude greater than that encountered in more usual situations such as pipe and channel flows. In our experiments the joint roughness was idealized with sawtooth corrugations. We found that Darcy's Law became invalid for Reynolds numbers greater than about 100. Hence, for most of our studies the flow was non-Darcian, and so we adopted the usual convention of representing pressure losses in terms of an apparent friction factor. When the roughness peaks were aligned, resulting in maximum flow disturbance, the friction factor increased when the relative roughness was increased, simulating the closure of a joint due to normal-direction loading. However, when the roughness peaks were 180° out of phase, so that peaks were opposite valleys, the friction factor initially increased with greater relative roughness, but then decreased. 2 refs., 8 figs., 2 tabs.

45290 **(NUREG/CR—3736) Field and theoretical investigations of fractured crystalline rock near Oracle, Arizona.** Jones, J.W.; Simpson, E.S.; Neuman, S.P.; Keys, W.S. (Arizona Univ., Tucson (USA). Dept. of Hydrology and Water Resources). Aug 1985. 114p. NTIS, PC A06/MF A01 - GPO. File Number TI85902090.

A combination of geophysical and hydraulic testing has been conducted in granite near Oracle, Arizona. The purpose of the work is to determine relationships, if any, among (1) fracture distribution, (2) geophysical properties, and (3) hydraulic properties of fractured rock of low hydraulic conductivity. To date, eight vertical borings spaced 20 to 50 feet apart, ranging from 250 to 300 feet in depth, have been drilled. The data obtained from neutron, gamma, acoustic-velocity, electrical-resistivity, and acoustic-televiewer logs, with the results of over 100 single-hole, straddle-packer injection tests make possible a detailed description of the fracture system. Geophysical logs readily detect fractures and are sensitive to subtle lithologic variations of the granite. Orientation and distribution of individual fractures were determined from interpretation of the acoustic-televiewer data, and from the analysis of core obtained from one borehole. Fracture densities over the 13-foot long straddle-packer test intervals did not correlate with measured hydraulic conductivity for each interval. A strong correlation between the neutron-log response and measured hydraulic conductivity does exist; it was used to supplant conductivity mesurements. The geostatistical technique of kriging provided a three-dimensional map of hydraulic conductivity that can be compared with subsurface interpretations of the geophysical logs. 52 refs., 42 figs., 8 tabs.

45291 **(PNL-SA—13177) Understanding, testing and development of stochastic approaches to hydrologic flow and transport through the use of the multigrid method and synthetic data sets.** Cole, C.R.; Foote, H.P.; Zimmerman, D.A.; Simmons, C.S. (Pacific Northwest Labs., Richland, WA (USA)). Apr 1985. Contract AC06-76RL01830. 17p. (CONF-8506124—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016280.

From International symposium on the stochastic approach to subsurface flow; Montvillargenne, France (2 Jun 1985).

A "numerical groundwater laboratory" approach is being developed at Pacific Northwest Laboratory to address basic groundwater system characterization and modeling issues. The philosophical theme that motivates this approach is that computation can extend theoretical science by allowing the macroscopic manifestations of simple basic laws that describe a phenomenon to be developed by the computer. The premise is that higher level equations have been "developed as much for their mathematical simplicity as for their capacity to model the salient features of a phenomenon." The numerical laboratory approach can be used as a tool for investigating, developing an understanding of, and testing various proposed methods for addressing various issues. The issues of conern are related to the many legitimate and haunting questions regarding the validity of the convective-dispersion equation and the realization that the parameter identification problem and the closely associated problem of spatial variability are two of the greatest difficulties facing the hydrologist. The assumption required for our approach is that modeling convective transport at the representative elementary volume (REV) scale with only molecular diffusion is sufficient to simulate the observed macroscopic manifestations groundwater transport. We believe that existing computational methods, specifically the multilevel adaptive solution technique coupled with image-processing software, are adequate to develop the numerical laboratory approach. Initial results from our numerical laboratory experiments seem to support our assumption that the basic laws of convection and diffusion at the REV scale can describe the macroscopic manifestations of transport. We recognize that the final test will, as always, rest with our ability to successfully transfer the knowledge gained using this computation approach to demonstrations in the field. 16 refs., 6 figs.

45296 **(SAND—85-0023) Marker Bed 139: a study of drillcore from a systematic array.** Borns, D.J. (Sandia National Labs., Albuquerque, NM (USA)). Aug 1985. Contract AC04-76DP00789. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85016831.

In southeastern New Mexico, Marker Bed 139 (referred to in this report as MB139) is one of 45 numbered siliceous or sulfatic units within the Salado Formation of the northern Delaware Basin. MB139 is divided into five zones. Zones I and V are the upper and lower contact zones, respectively. Zone II is a syndepositionally deformed subunit of polyhalitic anhydrite. Zone III is mixed anhydrite and polyhalitic anhydrite, a distinctive pale-green and pink, with subhorizontal fractures. Zone IV consists of interlayered halite and anhydrite without the overprint of polyhalite. This sequence was transitional between submarine and subaerial. The anhydritic units of MB139 formed in salt-pan or mudflat environments or both. Undulations observed along the upper contact of MB139 are interpreted to result from traction deposits or from reworking of the upper portion of the marker bed during the transition from anhydrite to halite deposition. Zones II and III exhibit soft-sediment deformation and later traces of dewatering; e.g., formation of stylolites. Such deformation is not observed in the halite above MB139 or in Zone V and the halite units below MB139. A distinctive set of subhorizontal fractures occurs in MB139 in mid-Zone III and, to some extent, in Zone IV. These fractures are partially infilled with halite and polyhalite. Brine occurrences at the mined facility horizon at the Waste Isolation Pilot Plant may be related to these fractures. The fractures formed either in response to stress cycles that were functions of sedimentation and erosion, or in response to deformation in the underlying Castile Formation. The subhorizontal orientation, dominant in the sampling to date, is more consistent with the interplay between stress and sedimentation cycles.

45297 **(SAND—85-1128) Theory for dynamic compaction of wet porous solids.** Drumheller, D.S. (Sandia National Labs., Albuquerque, NM (USA)). Aug 1985. Contract AC04-76DP00789. 41p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85017596.

Partially-saturated porous media exhibit complex behavior including plastic distortion, irreversible crushing of pores, and dilatancy. Pressure produced by compression of the pore fluid has a strong influence on these phenomena and greatly alters the response observed in the wet solid from that observed in the dry solid. This paper descibles these phenomena within the framework

of a theory for immiscible mixtures. It shows how a material representation originally derived for the hydrostatic compaction of a dry solid can be generalized to wet solids subjected to both distortional and volumetric deformation. Results of stress-wave calculations are compared to data obtained from a field test in which high explosive was detonated in a formation of partially-saturated ashfall tuff.

45298 **(CEA-CONF—7787) Quality factor in earth crust by analysis and modelling of Lg waves.** Campillo, M.; Bouchon, M.; Plantet, J.L. (CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)). Dec 1984. 29p. (In French). (CONF-841274—1). NTIS (US Sales Only), PC A03. File Number DE85752371.

From AGU fall meeting; San Diego, CA, USA (3 Dec 1984).

Lg waves are peculiarly well fitted to seismic wave attenuation in earth because they are superposition of multi-reflected wave S and, so, they have a limited field of propagation and strong amplitudes on an extended range of epicentral distances. The aim of this report is to study the frequency dependence of the quality factor Q for the earth crust of the center of France, by grouping data analysis and numerical modelling. In this study, the Lg waves are recorded by the CEA LDG (Laboratoire de Detection et de Geophysique). Results are consistent with the interpretation of Q frequency variation as a tectonic indicator.

45299 **(CONF-8510118—2) Guidelines for earthquake ground motion definition for the eastern United States.** Gwaltney, R.C.; Aramayo, G.A.; Williams, R.T. (Oak Ridge National Lab., TN (USA); South Carolina Univ., Columbia (USA). Dept. of Geology). 1985. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016959.

From DOE natural phenomena hazards mitigation conference; Las Vegas, NV, USA (7 Oct 1985).

Guidelines for the determination of earthquake ground-motion definition for the eastern United States are established in this paper. Both far-field and near-field guidelines are given. The guidelines were based on an extensive review of the current procedures for specifying ground motion in the United States. Both empirical and theoretical procedures were used in establishing the guidelines because of the low seismicity in the eastern United States. Only a few large to great ($M > 7.5$) sized earthquakes have occurred in this region, no evidence of tectonic surface ruptures related to historic or Holocene earthquakes have been found, and no currently active plate boundaries of any kind are known in this region. Very little instrumented data has been gathered in the East. Theoretical procedures are proposed so that in regions of almost no data a reasonable level of seismic ground motion activity can be assumed. The guidelines are to be used to develop the Safe Shutdown Earthquake, SSE. A new procedure for establishing the Operating Basis Earthquake, OBE, is proposed, in particular for the eastern United States. The OBE would be developed using a probabilistic assessment of the geological conditions and the recurrence of seismic events at a site. These guidelines should be useful in development of seismic design requirements for future reactors. 17 refs., 2 figs., 1 tab.

45300 **(NUREG/CR—4354) Study of seismicity and tectonics in New England. Final report.** Ebel, J.E. (Boston Coll., Weston, MA (USA). Weston Observatory). Aug 1985. 99p. NTIS, PC A05/MF A01 - GPO. File Number TI85902061.

The operation by Weston Observatory of a seismic network in New England from 1974 to 1985 is described, and the results of the seismic monitoring are summarized. The network coverage of Weston Observatory increased from 2 operating stations in 1974 to 36 stations in 1979 and was stabilized at 30 stations in the early 1980's. The network was used to find the locations and magnitudes of all earthquake activity detected during the study period. Most earthquakes from 1974 to 1985 were found to occur in the same places as those which have been documented historically, although the activity appears to be randon both in space and time. Studies of aftershocks and detailed monitoring in selected areas did not show any strong correlations between the earthquake locations and mapped geologic structures. It is concluded that the relationships among earthquakes, tectonic or structural zones and faults exposed on the surface are not well understood. The causes of the earthquake activity in the northeast are not clearly established with the seismic data which was gathered and analyzed. 41 refs., 50 figs., 6 tabs.

45301 **(PB—85-192748/XAB) Seismic and resistivity methods of geophysical exploration. Final report.** Henbest, O.J.; Erinakes, D.C.; Hixson, D.H. (Soil Conservation Service, Washington, DC (USA). Engineering Div.). Aug 1971. 179p. NTIS, PC A09/MF A01.

This technical release is designed to acquaint geologist, engineers, and soil scientists with the types of seismic and resistivity equipment adaptable to Soil Conservation Service (SCS) use, and the results and application that can be expected from the equipment. A brief discussion of seismic refraction and resistivity theory is presented. Operation techniques for such topics as use of dynamite, energy sources, electrode configurations and types of surveys are described. Computations of time-distance graphs and seismograms, derivation of the two layer formula, ohm-feet method, and Barnes Layer Method are discussed. Extensive sections are presented on interpretation, along with numerous figures and tables, and estimated cost data for performing seismic and refraction surveys. A discussion of complementary usage of surveys, geophysical reports, and contracting for geophysical surveys is also included.

45305 **(UCID—20504) Inversion of Rayleigh wave phase velocities between RSNT and RSON.** Randall, G.E.; Taylor, S.R. (Lawrence Livermore National Lab., CA (USA)). Jul 1985. Contract W-7405-ENG-48. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85013242.

Rayleigh wave phase velocities in the Canadian Shield are estimated for the path between RSNT and RSON in the period range of 10 to 100 sec. Frequency dependent stacking techniques are employed to form an estimate of phase velocity from a limited data set of marginal quality. Inversion of the phase velocities for shear velocity structure indicates an average crustal thickness of 40 km which is consistent with results from previous studies. The lower crustal velocities from our study appear to be slightly greater than those from other studies and Sn velocities along the path are about 4.7 km/s. The effectiveness of the frequency dependent stacking techniques confirms the assumption of signal-independent background noise dominating the records for periods less than

about 30 sec and signal-dependent multipathing noise dominating for periods longer than about 40 sec. 14 refs., 5 figs., 2 tabs.

45306 **Deep seismic sounding with nuclear explosives in the Soviet Union.** Scheimer, J.F.; Borg, I.Y. (Univ. of California, Livermore; Lawrence Livermore National Lab., CA). *Science (Washington, D.C.);* 226: No. 4676, 787-792(16 Nov 1984). Contract W-7405-ENG-48.

A large geophysical program of exploration that uses deep seismic sounding has been under way in the Soviet Union for decades. Underground nuclear explosives have been used as strong seismic sources since 1971. The wide spacing between these seismic sources-for example, 500 kilometers-has permitted seismic exploration of inaccessible areas in traverses up to 3000 kilometers in length. During the same time an ultra-deep drilling program has also been under way. The data gathered have been used to elucidate details of the crust as well as to describe layering and inhomogeneities in the underlying mantle. By Soviet account, deep seismic sounding has been instrumental in confirming the existence of numerous sedimentary structures containing oil and gas fields in western and eastern Siberia. 36 refs., 1 tab., 5 figs.

45307 **(AD-A—153690/3/XAB) Study of sound attenuation in sediments. Final technical report.** Addison, S.R.; Bass, H.E. (Mississippi Univ., University (USA). Physical Acoustics Research Lab.). Dec 1984. 73p. NTIS, PC A04/MF A01.

Doctoral thesis.

This dissertation describes an experimental method by which the low-frequency attenuation of compressional waves in a sediment may be measured in the laboratory. The Biot and Hamilton models of sound propagation through sediments are reviewed. Measurements of attenuation in one laboratory sediment are presented, and the measured attenuation is compared to the predictions of the Biot and Hamilton models. The functional dependence of the attenuation measurements is of the form predicted by the Biot model, although the actual magnitude of the measured attenuation is higher than expected. The excess attenuation may be explained by the incomplete de-gasification of the sediment.

45308 **(SAND—85-0266C) Random fracture nucleation and interaction in one dimension.** Kipp, M.E.; Grady, D.E. (Sandia National Labs., Albuquerque, NM (USA)). 1985. Contract AC04-76DP00789. 15p. (CONF-850770—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014641.

From EXPLOMET '85 - international conference on metallurgical applications of shock wave and high strain-rate phenomena; Portland, OR, USA (28 Jul 1985).

In a one-dimensional fragmentation problem, such as illustrated by a rapidly expanding ring, fragments are formed by explicit fractures. Recently, we have described the local stress release and energy dissipation process of such a fracture as it progresses from nucleation to completion. During unloading, waves communicate to neighboring fractures at speeds governed by momentum diffusion which is considerably less than the elastic sound speed. We have combined this explicit fracture process with a random nucleation law, to describe the complex interaction of growing fractures that leads to multiple fragmentation. During the time to fragmentation, some fractures may be selectively arrested, depending on the competing effects of tensile loading intensity and rate of nucleation. Concepts are explored at the extremes of behavior where energy limitations or available fracture sites dominate the distribution. Although uncertainties exist in the form of the nucleation law, the calculated fragmentation process is consistent in trend with data available for expanding metal rings. 9 refs., 5 figs.

45309 **^{57}Fe Moessbauer spectra of natural and synthetic hastingsites, and implications for peak assignments in calcic amphiboles.** Thomas, W.M. (Univ. of California, Los Angeles). *American Mineralogist;* 67: No. 5-6, 558-567(May-Jun 1982).

In order to test the validity of unique assignments of ^{57}Fe Moessbauer spectral peaks to individual crystallographic sites in hornblendes, spectra were collected for six synthetic hastingsites, ideally $NaCa_2Fe_4^{2+}Fe^{3+}Si_6Al_2O_{22}(OH)_2$, and for three natural hornblendes of similar compositions. The synthetic, end-member hastingsites are inferred from compositional constraints to have the M(1), M(2), and M(3) sites filled entirely with iron and to have little or no iron in the M(4) site. Thus, these samples provide a test of peak-to-site correspondence. These results suggest that the ferrous absorption has a characteristic shape independent of iron concentration and that the ferrous doublets cannot be assigned to sites uniquely to yield accurate site populations for hornblendes. The observed ferrous area fractions cannot be explained by peak broadening due to octahedral next-nearest-neighbor effects, although it is possible that the presence of neighboring tetrahedral aluminum may be a dominant factor in perturbing the areas of the ferrous doublets.

45310 **Fluorine end-member micas and amphiboles.** Petersen, E.U.; Essene, E.J.; Peacor, D.R.; Valley, J.W. (Univ. of Michigan, Ann Arbor). *American Mineralogist;* 67: No. 5-6, 538-544(May-Jun 1982).

The near end-member minerals fluorphlogopite (XF = 0.96) and fluortremolite (XF = 0.82) have been found in Greenville marbles near Balmat, New York. These micas and amphiboles, like other fluorine-rich minerals reported in the literature, are extremely low in iron. The substitution of F for OH is partly responsible for stabilizing these minerals in the granulite facies marbles of the Adirondacks. Fluorine-rich amphiboles and micas are more common than generally recognized. A literature review shows that many amphiboles and micas have more than fifty percent of the interlayer site occupied by fluorine. This degree of solid solution qualifies these phases as independent minerals, but they are not currently recognized by the I.M.A. Identification of the mineralogically and petrologically important solid solution of fluorine for hydroxyl is currently obscured by use of names that imply hydroxyl end-members.

45311 **Reaction pigeonite = diopside/sub ss/ + enstatite/sub ss/ at 15 kbar.** Schweitzer, E. (State Univ. of New York, Stony Brook). *American Mineralogist;* 67: No. 1-2, 54-58(Jan-Feb 1982).

On the join enstatite-diopside at 15 kbar, the reaction pigeonite = diopside/sub ss/ + enstatite/sub ss/ is in equilibrium at 1465 +/- 10°C. The compositions of the three coexisting phases are (mole percent): pigeonite = Wo/sub 18.3/En/sub 81.7/ (+/-1.5); enstatite = Wo/sub 5.5/En/sub 94.5/ (+/-1.0); diopside = Wo/sub 28.5/En/sub 70.5/ (+/-3.5). Experiments were done in a piston cylinder apparatus using trace amounts of water as a flux, and were reversed to establish equilibrium compositions.

45312 **Polarized optical absorption and ^{57}Fe Moessbauer study of pegmatitic muscovite.** Finch, J.; Gainsford, A.R.; Tennant, W.C. (Dept. of Scientific and Industrial Research, Petone, New Zealand). *American Mineralogist;* 67: No. 1-2, 59-68(Jan-Feb 1982).

^{57}Fe Moessbauer spectra and polarized absorption spectra in the region 4000-6800A are reported for 14 common pegmatitic muscovites, 12 of which were selected from an extensive pegmatite complex. They were chosen to cover a wide range of color types (deep green, green, red-green and ruby-red) and ferric/ferrous ion ratios. Optical absorption properties are discussed in terms of the Fe^{2+}, Fe^{3+} distribution in the M1 and M2 sites. Background absorption, and hence depth of color, appears to be determined primarily by an intense metal-ligant charge transfer which peaks in the UV and the intensity of which correlates linearly with the Fe^{2+} concentration in the normally unoccupied M2 site. The presence or absence of the Fe^{2+}-Fe^{3+} metal-metal charge transfer bands in the region 5000-6000A gives rise to the red and green hues observed in the muscovites studied.

45313 **Crystal structure of a pink muscovite from Archer's Post, Kenya: implications for reverse pleochroism in dioctahedral micas.** Richardson, S.M.; Richardson, J.W. Jr. (Iowa State Univ., Ames). *American Mineralogist;* 67: No. 1-2, 69-75(Jan-Feb 1982).

The crystal structure of a reverse pleochroic muscovite containing both Fe^{3+} and Mn^{3+} has been determined by standard single-crystal X-ray methods. The mica has a $2M_1$ polytype, space group C 2/c. Average bond lengths in tetrahedral sites are 1.646 A and 1.639A, compatible to bond lengths in Si-Al tetrahedra of other analyzed muscovites, but also compatible with minor site occupancy by Fe^{3+}. Mean bond strengths and electron densities for the sites are also compatible with but do not require minor amounts of tetrahedral Fe^{3+}. A pleochroic mechanism related to tetrahedral Fe^{3+}, therefore, cannot be ruled out. Thermal vibration ellipsoids of atoms in the octahedral layer, however, are oriented with long axes perpendicular to the layer, which suggests the possibility that reverse pleochroism is due instead to an unusual configuration of d-orbitals for octahedrally-coordinated Fe^{3+} or Mn^{3+}.

45314 **Hydrous pyriboles and sheet silicates in pyroxenes and uralites: intergrowth microstructures and reaction mechanisms.** Veblen, D.R.; Buseck, P.R. (Arizona State Univ., Tempe). *American Mineralogist;* **66**: No. 11-12, 1107-1134(Nov-Dec 1981).

A wide variety of intergrowth microstructures have been observed with high-resolution transmission electron microscopy in eight different pyroxene specimens that have been partially or wholly altered to other minerals. The product phases of the alteration reactions include amphibole, clinojimthompsonite, chain-width disordered pyribole, and several sheet silicates. The microstructures indicate that in addition to multiple paths for reaction, there may be multiple mechanisms by which a specific reaction may occur. Replacement of pyroxene by amphibole takes place in such a way that multiple nucleation events may result in several different types of out-of-phase boundaries in the product amphibole. The distinction between exsolution and alteration reaction as a mechanism for the formation of narrow amphibole lamellae in pyroxenes is chemical, rather than structural. The determination of which mechanism has operated must therefore be based on chemical and textural arguments. It is concluded that all cases of pyroxene replacement by amphibole that have been reported are at least consistent with an alteration mechanism, while the textures occurring in some specimens are clearly inconsistent with an exsolution mechanism.

45315 **Influence of CO_2 on melting of model granulite facies assemblages: a model for the genesis of charnockites.** Wendlandt, R.F. (Lunar and Planetary Institute, Houston, TX). *American Mineralogist;* **66**: No. 11-12, 1164-1174(Nov-Dec 1981).

Partial melting studies at crustal pressures in SiO_2-rich portions of the system $KAlSiO_4$-Mg_2SiO_4-H_2O-CO_2 can be used to model the anatectic origin of charnockites. The univariant reaction phlogopite + sanidine + quartz + vapor = enstatite + liquid produces a SiO_2-rich melt (granite analog) at 3 kbar; the vapor composition at the solidus is buffered to high H_2O-contents by the coexistence of phlogopite with its breakdown products. At higher pressures, 8 and 15 kbar, the fluid phase is buffered to higher CO_2-contents and the melt composition becomes enriched in K_2O and MgO (charnockite analog). Melting relations are controlled by the expansion of the quartz liquidus field relative to the enstatite and sanidine fields with increasing pressure. Partial melts generated at the base of the crust in the presence of a CO_2-rich fluid will be of an alkaline nature and will crystallize enstatite at lower pressures. CO_2-saturated melting of similar SiO_2-rich bulk compositions (phlogopite-absent) by the reaction enstatite + sanidine + quartz + CO_2 = liquid occurs at temperatures in excess of 1000°C to about 15 kbar. Liquid compositions show analogous trends, however, with increasing pressure, to those observed in the 5-component system as a consequence of the expansion of the quartz liquidus surface relative to the enstatite surface.

45316 **Formation of pigeonite on the join hedenbergite-ferrosilite at 11.5 and 15 kbar: experiments and a solution model.** Lindsley, D.H. (State Univ. of New York, Stony Brook). *American Mineralogist;* **66**: No. 11-12, 1175-1182(Nov-Dec 1981).

The three-pyroxene assemblage orthoferrosilite (OFs)-pigeonite (Pig)-hedenbergite (Hd/sub ss/) is stable on the $CaFeSi_2O_6$-$Fe_2Si_2O_6$ join at pressures above 11.5 kbar and below approximately 20 kbar. It is found at 825 +/- 10°C (11.5 kbar) and at 855 +/- 10°C (15 kbar). At lower pressures the low-Ca pyroxenes decompose to Hd/sub ss/ + Fayalite + Quartz while at and above 20 kbar the Hd/sub ss/ + Pig pair is replaced by a single clinopyroxene (Cpx). Under the assumption that (a) Pig has the C2/c space group at elevated temperatures and (b) Ca enters only the M2 site of Cpx, the Cpx solution can be described by an asymmetric Margules model: G/sup XS/ = [(20.697 - 0.00235P)X/sub CFs/ + (16.941 + 0.00592P)X/sub Hd/]X/sub Hd//X/sub CFs/, where units are kJ and kbar, and X/sub CFs/ and X/sub Hd/ are the mole fractions of $Fe_2Si_2O_6$ and of $CaFeSi_2O_6$ in Cpx. The Gibbs free energy for the reaction OFs = CFs (C2/c) is given by ΔG_1 = +1.843 - 0.001676T(Kelvin) + 0.03686P kJ. The Opx solution is assumed to be symmetric, with W/sub G/ = 15 kJ.

45317 **Heat capacities of the alkali feldspars between 350 and 1000 K from differential scanning calorimetry, the thermodynamic functions of the alkali feldspars from 298.15 to 1400 K, and the reaction quartz + jadeite = analbite.** Hemingway, B.S.; Krupka, K.M.; Robie, R.A. (Geological Survey, Reston, VA). *American Mineralogist;* **66**: No. 11-12, 1202-1215(Nov-Dec 1981).

The heat capacities, C/sub p/° of low albite, analbite, microcline, and high sanidine have been measured between 350 and 1000 K by differential scanning calorimetry. Evaluation of the results of several phase equilibrium studies of the reaction quartz + jadeite = analbite yields -3029.870 +/- 4.200 and -2851.300 +/- 4.200 kJ/mol for the enthalpy and Gibbs free energy of formation, respectively, of jadeite at 298.15 K and 1 bar. The enthalpy of the low albite-analbite transition determined from calorimetry using Amelia albite for low albite underestimates the magnitude of the enthalpy of the transition because Amelia albite is partially disordered (e.g., Holm and Kleppa, 1968).

45318 **(USGS-OFR—84-634) Analytical results of stream-sediment and nonmagnetic heavy-mineral-concentrate samples with sample locality map from portions of the Challis 1° x 2° quadrangle, Idaho.** McDanal, S.K.; Cooley, E.F.; Callahan, J.E. (Geological Survey, Reston, VA (USA)). 1984. 401p. US Geological Survey, Box 25425, Lakewood, CO 80225. File Number TI85901661.

This report presents the results of a geochemical survey of the Challis 1° x 2° quadrangle, Idaho. The Challis 1° x 2° quadrangle comprises about 7000 mi^2 (18,000 km^2) in the center of Idaho, and lies about 50 mi (80 km) northeast of Boise, Idaho. We collected samples at 2516 sites. At most sites, we collected both a stream-sediment sample and a heavy-mineral concentrate. Where suitable outcrop was available, we collected rock samples, and where water was available, we collected water samples. We analyzed 2516 stream-sediment samples, 2354 heavy-mineral-concentrate samples, and approximately 1300 water samples, for a sampling density of about 1 sample per 2.9 mi^2 for the stream sediment and heavy-mineral concentrate.

45319 **Devolatilization equilibria in H_2O-CO_2 and H_2O-CO_2-NaCl fluids: an experimental and thermodynamic evaluation at elevated pressures and temperatures.** Jacobs, G.K.; Kerrick, D.M. (Pennsylvania State Univ., University Park). *American Mineralogist;* **66**: No. 11-12, 1135-1153(Nov-Dec 1981).

Experimental equilibrium brackets have been obtained in H_2O-CO_2 and H_2O-CO_2-NaCl fluids for several decarbonation equilibria. Using available thermodynamic data and activities for H_2O and CO_2 calculated from the modified hard-sphere Redlich-Kwong (HSMRK) equation of Kerrick and Jacobs (1981), thermodynamic extrapolations in P-T-X/sub CO_2/ space of devolatilization equilibria yield close agreement with the experimental equilibrium brackets, implying that the experimental and thermodynamic data are internally consistent, and that the activities of H_2O and CO_2 predicted by the HSMRK equation of Kerrick and Jacobs (1981) are quite reasonable. The significance of assuming ideal vs. non-ideal mixing

of H_2O and CO_2 for the calculation of T-X/sub CO_2/ topologies is demonstrated for a portion of the system $CaO-Al_2O_3-SiO_2-H_2O-CO_2$. Experiments in H_2O-CO_2-NaCl mixtures at P=6 kbar show that, compared to binary H_2O-CO_2 fluids, the presence of small (5-10 wt.%) amounts of NaCl in the fluid phase significantly increase the activity of CO_2 for H_2O-rich compositions. At 2 kbar, however, little difference in the activity of CO_2 in H_2O-CO_2-NaCl vs. H_2O-CO_2 mixtures is implied by the experiments.

45320 **Join $CaAl_2Si_2O_8-H_2O$ (anorthite-water) at elevated pressures and temperatures.** Goldsmith, J.R. (Univ. of Chicago, IL). *American Mineralogist;* 66: No. 11-12, 1183-1188(Nov-Dec 1981).

A portion of the join anorthite-water in the quaternary system $CaO-Al_2O_3-SiO_2-H_2O$ has been reinvestigated in the range 550°-990°C, from 7 to 16 kbar. The reaction 4 anorthite + $H_2O \rightleftharpoons$ 2 zoisite + kyanite + quartz can be described by the equation P = -4590 + 20.4T, where P is in bars, T is in °C. The reaction is terminated at an invariant point at 725°C and 10.2 kbar, where melt first appears. The two reactions at higher temperatures and pressures are zoisite + kyanite + quartz + vapor $\rightleftharpoons$ liquid, and anorthite + vapor $\rightleftharpoons$ liquid, the latter delimiting the fields of anorthite + vapor and zoisite + kyanite + liquid + vapor. The incongruent melting of anorthite + water, beginning at 725°C, is significantly lower than earlier reported, and is unusual in that the solid assemblage anorthite + vapor lies on the high-temperature side of the boundary.

5805 Oceanography

45321 **(LA-UR—85-2412) Three-dimensional modeling of tsunami waves.** Mader, C.L. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 7p. (CONF-8508112—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015724.

From Tsunami symposium; Victoria, Canada (6 Aug 1985).

Two- and three-dimensional, time-dependent, nonlinear, incompressible, viscous flow calculations of realistic models of tsunami wave formation and run up have been performed using the Los Alamos-developed SOLA-3D code. The results of the SOLA calculations are compared with shallow-water, long-wave calculations for the same problems using the SWAN code. Tsunami wave formation by a continental slope subsidence has been examined using the two numerical models. The SOLA waves were slower than the SWAN waves and the interaction with the shoreline was more complicated for the SOLA waves. In the SOLA calculation, the first wave was generated by the cavity being filled along the shoreline close to the source of motion. The second wave was generated by the cavity being filled from the deep water end. The two waves interacted along the shoreline resulting in the second wave being the largest wave with a velocity greater than the first wave. The second wave overtook the first wave at later times and greater distances from the source. In the SWAN calculation, the second wave was smaller than the first wave. 6 refs.

45322 **(DOE/ER—0191/2) Programs of the Office of Energy Research.** (USDOE Office of Energy Research, Washington, DC). Jul 1985. 27p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85017594.

The purpose of this research has been to support the energy technology development programs by providing insight into fundamental science and associated phenomena and developing new or advanced concepts and techniques. Today, this responsibility rests with the Office of Energy Research (ER), DOE, whose present programs have their origins in pioneering energy-related research which was initiated nearly 40 years ago. The Director, Office of Energy Research, also acts as the chief scientist and scientific advisor to the Secretary of Energy for the entire spectrum of energy research and development (R and D) programs of the Department. ER programs include several thousand individual projects and hundreds of laboratories, universities, and other research facilities throughout the United States. The current organization of ER is shown. The budgets for the various ER programs for the last two fiscal years are shown. In the following pages, each of these programs and activities are described briefly for the information of the scientific community and the public at large.

45323 **(AD-A—154967/4/XAB) Solar cycle variation of ephemeral regions. Final report, 1 November 1983-1 November 1984.** Harvey, K.L. (National Oceanic and Atmospheric Administration, Boulder, CO (USA). Environmental Research Labs.). 1 Dec 1984. 37p. NTIS, PC A03/MF A01.

Ephemeral active regions (ER) were identified and counted for selected periods from 1970 to mid-1984 using the daily, full-disk photospheric magnetograms taken by the National Solar Observatory. The number of ephemeral regions varies nearly in phase with the solar cycle. At solar minimum, ER are distributed almost uniformly in latitude; by solar maximum, peaks in the latitude distribution are observed in the sunspot zones and in higher latitude bands. In the quiet sun, 37% of the He I lambda 10830 dark points, used as a proxy for x-ray bright points (XBP), are associated with ER; 63% overlie bipoles that appear to be the chance encounter of opposite polarity network. The percentages are somewhat different in coronal holes; 21% of the dark points in He I are associated with ephemeral regions and 79% with bipoles that apparently result from chance encounters of flux. The dark points observed in the quiet sun and in coronal holes, vary anti-correlated with the solar cycle. Little relations was found between the areal density of He I dark points and ephemeral regions within the boundaries of coronal holes and parameters of the high-speed solar-wind streams associated with coronal holes. This study suggests that (1) ephemeral regions are not small active regions and that they may be primarily surface phenomena, possibly resulting from convection interacting with sub-photospheric fields, and (2) He I dark points, and therefore, XBP, are more often associated with the encounter of existing opposite polarity network flux, the occurrence of which is related to the amount of mixed-polarity areas which varies inversely with the solar cycle.

45324 **(CEA-CONF—7432) Some clues for the iron origin in galaxy clusters.** Rothenflug, R.; Arnaud, M.; Boulade, O.; Vigroux, L. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Jun 1984. 4p. (CONF-8406257—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE85752049.

From 84. x-ray astronomy congress; Bologna, Italy (26 Jun 1984).

In galaxy clusters, the mass in iron can be considered as directly proportional to the mass in gas. We establised that the mass in gas is linked to the total cluster luminosity in visible matter as Msub(G) is proportional to Lsub(opt)sup(1.6). On the other side, the gas mass seems proportional to the virial mass. We propose that this virial mass is made of star and/or star remnants which produced the iron in the past. The implications of this hypothesis is examined in terms of chemical evolution model of a mass of gas.

45325 **(FNAL/C—85/99-A) High energy neutrinos from Cyg X-3.** Walker, T.P.; Kolb, E.W.; Turner, M.S. (Fermi National Accelerator Lab., Batavia, IL (USA)). Jul 1985. Contract AC02-76CH03000. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85013219.

Assuming that the UHE air showers from Cyg X-3 are produced by photons, we calculate the expected neutrino emission from a model which produces the γ-rays in the atmosphere of the Cyg X-3 companion. We discuss the possibility of detecting such neutrinos in underground detectors and the constraints that such a signal places on the use of this model in other particle production scenarios. 16 refs., 5 figs.

45326 (FRNC-TH—1818) Interstellar origin atomic hydrogen in the solar system: modelling and application to analysis of Lyman alpha result (intensity and line profile) from Prognoz 5 and 6 satellites. Lallement, R. (Paris-6 Univ., 75 (France)). Oct 1983. 213p. (In French). NTIS (US Sales Only), PC A10/MF A01. File Number DE85751179.

Interstellar gas interaction with solar environment allows to deduce intensity distribution and spectral distribution and spectral profiles of Lyman-alpha and He lines. From comparison of these computed intensities and line profiles with the measurements, the gas state before the interaction with sun is hoped to be found. The construction of such a modelling, for neutral hydrogen, and applied to Lyman-alpha results obtained by sovietic satellites Prognoz 5 and 6, is presented here in this thesis. The method used to distinguish the two contributions to detected Lyman alpha emission: terrestrial and interplanetary contribution. Then hypothesis used in the model construction of the neutral hydrogen interaction with solar system are discussed and the model is presented. A test series of model sensitiveness to different parameters is presented particularly about the absorption cell. Then the comparison results between model and experimental data corrected from terrestrial contamination, always concerning hydrogen cell. A discussion on results is presented for concluding.

45327 (INIS-mf—9744) Radio structure in quasars. Barthel, P.D. (Rijksuniversiteit Leiden (Netherlands)). 13 Sep 1984. 184p. NTIS (US Sales Only), PC A09/MF A01. File Number DE85781545.

Includes Dutch summary; includes previously published material; 333 refs.; 48 figs.; 21 tabs.

In this thesis, observational attention is given to the extended extragalactic radio sources associated with quasars. The isolated compact radio sources, often identified with quasars, are only included in the discussions. Three aspects of the radio structure in quasars and their cosmic evolution are considered: a study of the parsec scale morphology in quasar cores, in relation to the extended morphologies; an investigation of possible epoch dependent hotspot properties as well as a more detailed investigation of this fine scale structure; a VLA project was carried out to obtain morphological information on scales of 0.5 arcsec on high redshift quasars and to investigate possible epoch dependent morphological properties. MERLIN observations at 0.1 arcsec resolution to supplement the VLA data were initiated.

45328 (INIS-mf—9752) Broad line regions in Seyfert-1 galaxies. High resolution spectroscopy and multicomponent kinematical models. Groningen, E. van. (Rijksuniversiteit Leiden (Netherlands)). 29 Nov 1984. 156p. NTIS (US Sales Only), PC A08/MF A01. File Number DE85781546.

Includes Dutch summary; 300 refs.; 50 figs.; 16 tabs.

To reproduce observed emission profiles of Seyfert galaxies, rotation in an accretion disk has been proposed. In this thesis, the profiles emitted by such an accretion disk are investigated. Detailed comparison with the observed profiles yields that a considerable fraction can be fitted with a power-law function, as predicted by the model. The author analyzes a series of high quality spectra of Seyfert galaxies, obtained with the 2.5m telescope at Las Campanas. He presents detailed analyses of two objects: Mkn335 and Akn120. In both cases, strong evidence is presented for the presence of two separate broad line zones. These zones are identified with an accretion disk and an outflowing wind. The disk contains gas with very high densities and emits predominantly the lower ionization lines. He reports on the discovery of very broad wings beneath the strong forbidden line 5007.

45329 (LA-UR—85-2457) Upper limits to the masses of objects in the solar comet cloud. Hills, J.G. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 5p. (CONF-8506174—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015713.

From 2. asteroids, comets, and meteors symposium; Uppsala, Sweden (3 Jun 1985).

The lack of a large steady stream of long-period comets with semi-major axes less than 2 x 10^4 AU rules out the sun having a companion more massive than about 0.01 M/sub solar/ with a semi-major axis less than about 1 x 10^4 AU. Any companion with a semi-major axis between 1 x 10^4 AU and 5 x 10^4 AU has more than a 50% probability of having entered the planetary system during the lifetime of the Solar System. The lack of apparent damage to the planetary system rules out any companion more massive than about 0.02 M/sub solar/ with a semi-major axis less than about 5 x 10^4 AU.

45330 (LAPP-TH—85) Constraints on a system of two neutral fermions from cosmology. Binetruy, P.; Girardi, G.; Salati, P. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jul 1983. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85752050.

Using the standard model of cosmology we study the evolution of the population of a coupled system of two neutral fermions in which the lighter one is stable. During the expansion their population can be frozen at a certain level which makes them contribute to the mass density of the universe. The details of the freezing depend crucially on the couplings and on the masses of these two fermions, so that, comparison with the measured mass density in the universe gives constraints on the parameters of the physical system we examine. We discuss in detail different configurations for the couplings among these fermions; in particular in the case of large mixing we obtain restrictive bounds on both masses. Our study is relevant to supersymmetric grand unified models which predict the occurence of light interacting neutral fermions, particularly Higgsinos.

45331 (LAPP-TH—99) Recombination of the primeval plasma and light-inos. Salati, P.; Wallet, J.C. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Mar 1984. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752044.

The recombination of neutral hydrogen in the early Universe is reinvestigated taking into account light neutral fermions, stable or radiatively unstable. When these fermions are stable, their main effect is to increase the expansion rate of the Universe, and to increase the fossilized ionization xsub(e) of matter Big Bang nucleosynthesis provides density constraints on the baryonic components and if we assume that the Universe is closed with light neutral fermions, we can set limits upon xsub(e): 4 10^{-4} < xsub(e) < 2 10^{-3} instead of the previous baryon-dominant Universe result: 3 10^{-5} < xsub(e) < 3 10^{-4}. If the light neutral fermions decay radiatively, the emitted photon is in the UV-range and reionizes the neutral matter. We point out that matter can be completely reionized at a redshift Z approximately 100 for radiative lifetimes in the range 10^{20} - 10^{24} seconds. Supersymmetry provides us with such a light "ino". The reaction photino → photon + gravitino exhibits the good relation between the photino-lifetime and the ionizing photon energy.

45332 (PB—85-202927) Progress report on the analysis of long exposure SWP high-resolution spectra of cool stars. Final report. Linsky, J.L.; Ayres, T.R.; Brown, A.; Carpenter, K.; Jordan, C. (National Bureau of Standards, Boulder, CO (USA). Quantum Physics Div.). 1984. 5p. Proceedings of Future of Ultraviolet Astronomy Based on Six Years of IUE Research, Greenbelt, MD., April 3-5, 1984, NASA Conference Publication 2349, p445-449 1984.

During the last few years the authors have obtained very-long-exposure, high-dispersion SWP spectra of many stars located throughout the cool half of the HR diagram. These 12-21 hour exposures were obtained by combining NASA and Vilspa shifts so as to obtain the longest possible exposures at times of low background. Included are dwarf stars of spectral type GO V-M2 V, G9.5 III-M5 II giants, G2 Ib-M2 Iab supergiants, a number of RS CVn-type systems, and Barium stars. Given the importance of this data set and the many questions that it can answer with appropriate data reduction and extensive modeling efforts, the authors summarize briefly what has and is being done with these data.

45333 **(SAND—85-1521C) Coded aperture imaging system optimized for hard x-ray and gamma ray astronomy.** Gehrels, N.; Cline, T.L.; Huters, A.F.; Leventhal, M.; MacCallum, C.J.; Reber, J.D.; Stang, P.D.; Teegarden, B.J.; Tueller, J. (National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center; Bell Labs., Murray Hill, NJ (USA); Sandia National Labs., Albuquerque, NM (USA); State Univ. of New York, Geneseo (USA)). 1985. Contract AC04-76DP00789. 5p. (CONF-850883—7). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016938.

From 19. international cosmic ray conference; La Jolla, CA, USA (11 Aug 1985).

A coded aperture imaging system has been designed for the Gamma-Ray Imaging Spectrometer (GRIS). The system is optimized for imaging 511-keV positron-annihilation photons. For a galactic center 511-keV source strength of 10^{-3} $cm^{-2}s^{-1}$, the source location accuracy is expected to be +-0.2°.

45334 **(SI—84-01) News from cosmic rays at high energies.** Grupen, K. (Siegen Univ. (Gesamthochschule) (Germany, F.R.). Abt. fuer Physik). 1984. 78p. Siegen Univ. (Gesamthochschule) (Germany, F.R.). Abt. fuer Physik.

Basic data about primary cosmic rays, cosmic rays at ground level and underground are presented. The experimental evidence for the discovery of a point source (Cygnus X3) emitting extremely energetic photons (>1000 TeV) is described and discussed. Experimental results from emulsion chambers at mountain altitudes or in balloons and from the study of extensive air showers are reported and compared to accelerator data. The status of Kolar events and anomalons is reviewed.

45335 **(UCRL—92972) Theoretical models for Type I and Type II supernova.** Woosley, S.E.; Weaver, T.A. (California Univ., Santa Cruz (USA). Lick Observatory; Lawrence Livermore National Lab., CA (USA)). 1985. Contract W-7405-ENG-48. 28p. (CONF-850375—19). NTIS, PC A03/MF A01; GPO Dep. File Number DE85016288.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

Recent theoretical progress in understanding the origin and nature of Type I and Type II supernovae is discussed. New Type II presupernova models characterized by a variety of iron core masses at the time of collapse are presented and the sensitivity to the reaction rate $^{12}C(\alpha,\gamma)^{16}O$ explained. Stars heavier than about 20 M/sub solar/ must explode by a "delayed" mechanism not directly related to the hydrodynamical core bounce and a subset is likely to leave black hole remnants. The isotopic nucleosynthesis expected from these massive stellar explosions is in striking agreement with the sun. Type I supernovae result when an accreting white dwarf undergoes a thermonuclear explosion. The critical role of the velocity of the deflagration front in determining the light curve, spectrum, and, especially, isotopic nucleosynthesis in these models is explored. 76 refs., 8 figs.

45336 **Production and detection of high-energy neutrinos from Cygnus X-3.** Kolb, E.W.; Turner, M.S.; Walker, T.P. (NASA/Fermilab Astrophysics Center, Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60810). *Physical Review [Section] D: Particles and Fields;* **32**: No. 5, 1145-1151(1 Sep 1985).

Cygnus X-3 is a potent source of high-energy γ rays, with energies up to 10^4 TeV. In the context of a model where these γ rays are produced by the collision of a high-energy proton beam with matter we calculate the flux, spectrum, and "light curve" of the neutrinos produced. Neutrinos with energies of 3—100 TeV may be detectable in large, underground detectors by the muons they produce in the surrounding rock.

45337 **Big bang photosynthesis and pregalactic nucleosynthesis of light elements.** Audouze, J.; Lindley, D.; Silk, J. (Institut d'Astrophysique, Paris; and Laboratoire Rene Bernas, Orsay, France). *Astrophysical Journal, Letters to the Editor;* **293**: No. 2, L53-L58(15 Jun 1985).

Two nonstandard scenarios for pregalactic synthesis of the light elements (^2H, ^3He, ^4He, and ^7Li) are developed. Big bang photosynthesis occurs if energetic photons, produced by the decay of massive neutrinos or gravitinos, partially photodisintegrate ^4He (formed in the standard hot big bang) to produce ^2H and ^3He. In this case, primordial nucleosynthesis no longer constrains the baryon density of the universe, or the number of neutrino species. Alternatively, one may dispense partially or completely with the hot big bang and produce the light elements by bombardment of primordial gas, provided that ^4He is synthesized by a later generation of massive stars.

45338 **Proper solar wind power estimation and planetary radiometric efficiencies; and reply.** Baker, D.N.; Bargatze, L.F.; Desch, M.D.; Kaiser, M.L. (Los Alamos National Lab., NM). *Nature (London);* **314**: No. 6013, 755-756(25 Apr 1985).

The paper discusses the work of M.D. Desch and M.L. Kaiser [Nature 310, 755-757(1984)], concerning proper solar wind power estimation and planetary radiometric efficiencies. The methods, assumptions and conclusions of the paper are criticised by the authors, D.N. Baker and L.F. Bargatze. Answers to the criticisms, by Desch and Kaiser are reported.

45339 **Cosmological production of Kaluza-Klein monopoles.** Harvey, J.A. (Princeton Univ., NJ (USA). Dept. of Physics); Kolb, E.W. (Fermi National Accelerator Lab., Batavia, IL (USA). Theoretical Astrophysics); Perry, M.J. (Princeton Univ., NJ (USA). Dept. of Physics; Cambridge Univ. (UK). Dept. of Applied Mathematics and Theoretical Physics). *Physics Letters, [Section] B;* **149**: No. 6, 465-469(27 Dec 1984).

The cosmological production of Kaluza-Klein monopoles is discussed. The present monopole-to-entropy ratio is calculated in some simple models with the conclusion that this ratio is unacceptably large unless additional mechanisms for entropy production or monopole annihilation are present.

45340 **Cooling pancakes.** Bond, J.R. (Cambridge Univ. (UK). Inst. of Astronomy; Stanford Univ., CA (USA). Inst. of Theoretical Physics); Centrella, J. (Illinois Univ., Urbana (USA). Dept. of Astronomy); Szalay, A.S. (California Univ., Berkeley (USA). Dept. of Astronomy; Eoetvoes Lorand Tudomanyegyetem, Budapest (Hungary)); Wilson, J.R. (California Univ., Livermore (USA). Lawrence Livermore Lab.). *Monthly Notices of the Royal Astronomical Society;* **210**: No. 3, 515-545(1 Oct 1984).

In theories of galaxy formation with a damping cut-off in the density fluctuation spectrum, the first non-linear structures to form are Zeldovich pancakes in which dissipation separates gas from any collisionless dark matter then present. One-dimensional numerical simulations of the collapse, shock heating, and subsequent thermal evolution of pancakes are described. Neutrinos (or any other cool collisionless particles) are followed by direct N-body methods and the gas by Eulerian hydrodynamics with conduction as well as cooling included. It is found that the pressure is relatively uniform within the shocked region and approximately equals the instantaneous ram pressure acting at the shock front. An analytic theory based upon this result accurately describes the numerical calculations.

45341 **(FRNC-TH—1626) Experimental study of electronic electrostatic waves detected in the terrestrial magnetosphere by the satellite GEOS 2.** Canu, P. (Paris-6 Univ., 75 (France)). Sep 1982. 163p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE85751186.

After reviewing the general characteristics of electrostator waves a brief resume is given of the observations made up to the present moment. The GEOS satellite and the "wave" experiment are described, as well as the method and results of the statistical study of the strong electrostatic wave observed. Creating mechanisms of diffuse auroras are discussed. In a later chapter a new

method of using the relaxation probe is presented as well as the results it gives on the mode of propagation of waves in the neighbourhood of the FUH frequency.

45342 (FRNC-TH—1768) Operation of a quadripole probe on magnetospheric satellite (GEOS experiment). Contribution to cold plasma behaviour study near equatorial plasma pause. Decreau-Prior, P. (Orleans Univ., 45 (France)). Jun 1983. 324p. (In French). NTIS (US Sales Only), PC A14/MF A01. File Number DE85751178.

This thesis is concerned with the exploitation of GEOS Satellite RF quadripole probe measurements, GEOS satellites have explored magnetosphere on the geostationary orbit and around it. Results a low to qualify the instrument in magnetospheric plasma (previously, it had been used only in ionosphere). Furthermore existence, outside the outer plasmasphere, of a cold population (from 0,4 to 8 eV) with medium density (from 2 to 50 particles cm^{-3}) is shown. This population had been ignored until then, by in situ particle measure experiment. So, new perspectives on coupling nature of the explored region with ionosphere, and with plasma sheet, more particularly because the temperature measured at the equator is on an average, clearly higher than in high ionosphere the principal source of magnetospheric cold plasma.

45343 (FRNC-TH—1922) Very low frequency valuation of a modulated beam of electrons: an application to the ARAKS experiment. Ahmadi, L. (Paris-6 Univ., 75 (France)). Dec 1982. 113p. (In French). NTIS (US Sales Only), PC A06/MF A01. File Number DE85752043.

The purpose of the ARAKS experiments was to study the effects due to the injection of energy electrons into the aurora zone. Here we analyse the TBF (2, 4 and 6 kHz) signals observed on the basis of interpretations in a closed or radiated field. We show that these signals are of an electromagnetic nature below fsub(HB) = 5 kHz and electrostatic above that figure, that they are correlated with the functioning of the electron gun and independent of the electrons' angle of attack. They propagate in the electronic hissing mode. At frequencies below fsub(HB), the main contribution comes from the close field, whereas it comes from the radiated field for f greater than fsub(HB).

45344 (TRITA-EPP—84-03) Model for the propagation of the westward traveling surge. Rothwell, P.L.; Silevitch, M.B.; Block, L.P. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Electron and Plasma Physics). May 1984. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701867.

A unified model is developed for the propagation of the Westward Traveling Surge (WTS) which can explain the diversity in the observed surge characteristics. We start with the Inhester-Baumjohann model for the surge region which implicitly includes both the Hall and Pedersen currents. It is found that precipitating electrons at the conductivity gradient modify the gradient, causing it to propagate as a wave front. The velocity of propagation is directly dependent on the ionization efficiency of the precipitating electrons and, increases dramatically when they become more energetic during substorm onsets. The direction of the surge motion depends on the presence of polarization charges on the poleward surge boundary. This is related to the efficiency with which the poleward ionospheric currents are closed off into the magnetosphere by the field-aligned currents. Inclusion of the electron-ion recombination rate modifies the surge propagation velocity and leads to explicit expressions for the conductivity profile. Sufficient precipitation current is required to overcome electron-ion recombination in order for the surge to expand. Whem the precipitating current is less than this threshold the WTS retreats. Therefore, the model describes the ionospheric response to both the expansion and recovery phases of the magnetic substorm.

45345 (TRITA-EPP—84-05) Rocket and satellite observations of electric fields and ion convection in the dayside auroral ionosphere. Marklund, G.; Heelis, R.A. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Electron and Plasma Physics). Jun 1984. 33p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701868.

Electric field observations from two high-altitude rocket flights in the polar cusp have been combined with satellite observations of ion drifts to infer details of the electric field and convection pattern of the dayside auroral ionosphere. A region of shear flow reversal can be inferred from the electric field observations on one flight near 15.30 MLT 20 minutes after the Dynamics Explorer 2 satellite crossed through the same region. The drift patterns observed by the two spacecrafts were very similar although shifted by 0.5 degrees, a shift which is expected from the observed change in the interplanetary magnetic field (IMF) B(sub)Z component during this time. A region of rotational flow reversal was covered by the other flight shortly after magnetic noon, at the same time the DE-2 satellite travelled along roughly the dawn-dusk meridian. By joining points of equal potential, integrated from the two datasets and assuming the reversal boundary to be an equipotential, the instantaneous convection pattern could be drawn showing crescent-shaped convection contours in the dusk cell and more circular shaped contours in the dawn cell.

45346 (CNRS-CPT—84-P-1616) Relation between the (N) and (N-1) electrons atomic ground state. Briet, P. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). May 1984. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751168.

The relation between the ground state of an N and (N-1) electrons atomic system are studied. We show that in some directions of the configuration space, the ratio of the N electrons atomic ground state to the one particle density is asymptotically equivalent to the (N-1) electrons atomic ground state.

45347 (CNRS-CPT—84-P-1625) Phase in the Aharonov-Bohm experiment. Horvathy, P.A. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Jun 1984. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751145.

The phase of the wave function scattered by an Aharonov-Bohm solenoid containing the quantized flux (h/e).n where n is an integer is shown to be (-1)sup(n) times that of the free one. A two-solenoid experiment is proposed to observe the difference between the cases when n is even or odd.

45348 (CONF-840788—4) Electron impact ionization of N^{4+} and N^{5+}. Defrance, P.; Chantrenne, S.; Brouillard, F.; Rachafi, S.; Belic, D.; Jureta, J.; Gregory, D. (Oak Ridge National Lab., TN (USA); Louvain Univ., Louvain-la-Neuve (Belgium). Inst. de Physique; Belgrade Univ. (Yugoslavia). Inst. za Fiziku). 1984. Contract AC05-84OR21400. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016359.

From International conference on the physics of highly ionized atoms; Oxford, UK (2 Jul 1984).

A new crossed beams apparatus for measuring absolute electron impact ionization cross-sections of multiply charged ions is described. First measurements are also reported which deal with N^{4+} and N^{5+}. The results are in good agreements with those previously obtained by the Oak Ridge group. For N^{5+} a non negligible signal is observed below the ground state ionization threshold. It is attributed to the presence of ions in metastable states. From the semi-empirical Lotz formula, the population of ions in those states is estimated to some 3%. 8 refs., 3 figs.

45349 (CONF-850979—2) Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins. Christophorou, L.G.; Rodrigo, H.; Marode, E.; Bastien, F. (Oak Ridge National Lab., TN (USA); Ecole Superieure d'Electricite, 91 - Gif-sur-Yvette (France). Lab. de Physique des Decharges). 1985. Contract AC05-84OR21400. 4p. NTIS, PC A02. File Number DE85017077.

From 8. annual gas discharge conference; Oxford, UK (16 Sep 1985).

In this paper we report: (1) the finding that the CH_4/CD_4 nonuniform field behavior is polarity dependent (i.e., the V/sub s/ of CD_4 is lower than the V/sub s/ of CH_4 for negative polarity which is just the opposite of that observed for positive polarity); (2) discuss the origins of the observed isotope effects and predict new isotopic dependences of V/sub s/; and (3) report results on the V/sub s/ of H_2S and D_2S for negative polarity which confirm their predicted isotopic behavior.

45350 **(DOE/ER/13116—4) Correlated charge changing ion-atom collisions. Progress report, March 15, 1984-March 15, 1985.** Bernstein, E.M.; Tanis, J.A. (Western Michigan Univ., Kalamazoo (USA). Dept. of Physics). Apr 1985. Contract AC02-83ER13116. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85017062.

Correlations between x-ray emission and projectile charge-changing events have been investigated for highly charged ions incident on gas targets under single collision conditions. Measurements were made for 100 to 360 MeV $_{20}$Ca/sup 16,17,18+/ + He, 15 to 200 MeV $_{16}S^{13+}$ + He, 100 to 370 MeV $_{20}$Ca/sup 12,16,17,18,19+/ + H_2, and 455 to 705 MeV $_{57}La^{40+}$ + H_2. Coincidences between electron capture and K x-ray emission for Ca/sup q+/ + H_2 and He, combined with previous measurements for 180 to 460 MeV $_{23}$V/sup 19,20,21+/ + He, demonstrate the existence and substantiate the theory of resonant transfer and excitation (RTE). Additional K-shell RTE studies include theoretical calculations of the cross sections for Li-like ions with $14 \leq Z \leq 26$ incident on He and Ne. The $_{57}La^{40+}$ + H_2 measurements provide evidence for L-shell RTE. For S^{12+} + He new evidence is obtained for nonresonant transfer and excitation, a two-step process in which uncorrelated electron capture and projectile excitation occur in a single encounter. Total electron capture cross sections for S^{13+} + He vary by about 10^8 over the energy range investigated and are in reasonable agreement with empirical values. Other studies of electron capture and loss include measurements of the charge-state dependence for V/sup q+/ + He (q = 18 to 23) at 8.55 MeV/amu.

45351 **(FRNC-TH—1564) Experimental study of the role of autoionizing states of H_2 (D_2) in the production of energetic protons (deuterons) by electron impact.** Landau, M. (Paris-6 Univ., 75 (France)). Jun 1982. 126p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE85751175.

The autoionizing state study seemed interesting to be taken up again in energy ranges corresponding to formation thresholds, a device well adapted to this range was available concerning electron measurements. Among other things, the overlapping autoionizing states have been displayed; proton kinetic energy distribution appropriate to each state at its formation threshold have been got. The whole of these results represents a proton (and D^+) production mechanism study contribution via autoionizing states. The theory used to describe autoionization cross-section calculations are recalled. Experimental results are presented, discussed, compared to experimental results and theoretical predictions.

45352 **(FRNC-TH—1766) Interpretation of duoplasmatron-type ion sources from a model of the discharge.** Lejeune, C. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Jun 1971. 198p. (In French). NTIS (US Sales Only), PC A09/MF A01. File Number DE85752051.

The performance improvement of these sources needs a precise knowledge of the emitting ionized medium, on which the whole of the properties depend. Ion production mechanisms have been studied in the discharge together with their transport towards the extraction hole. The source properties are described, in a new manner, as a function of the discharge modes. The discharge is characterized by the existence of a mode change, related to anode column neutral atom reduction in the anode column (arc starvation). The complementarity of probe measurements and the energy spectra analysis of the charges emitted by the anode enables measurement of the potential axial profile, to discover an electric energetic electron beam extracted from the cathodic plasma and to determine the electron density radial profile in the anode column. Result analysis allows to get a simple scheme of plasmas and laws controlling them in each of the important modes.

45353 **(FRNC-TH—1770) Experimental study of once ionized Helium Pα line shift. Plasma polarization effect.** Le Gall, P. (Orleans Univ., 45 (France)). Oct 1983. 134p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE85751180.

In a first time, an electrical device has been developped to obtain a plasma with a very wide electron density range (5.10^{16}-6.10^{17} electron/cm^3) in discharge tube. In a second time, accounting with local thermodynamic equilibrium criteria, plasma diagnostic methods have been studied: intensity ratio between the 587 A (HeI) line and the 4686 A (HeII) line to get the electron temperature; 4686 A line broadening for electron density. Displacement of the HeII Pα line has been measured statistically, with an 500 channel optical analyser. The displacement obtained is linear with electron density.

45354 **(GSI—85-1-Prepr.) Coupled state analysis of electron excitations in asymmetric collision systems.** Mehler, G.; Reus, T. de; Mueller, U.; Reinhardt, J.; Mueller, B.; Greiner, W.; Soff, G. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jan 1985. 22p. (CONF-8411142—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751870.

From 2. international workshop on cross sections for fusion and other applications; College Station, TX, USA (8 Nov 1984).

A coupled channel formalism is presented, using relativistic basis states of the target atom. Screening effects are incorporated by means of an effective potential of Hartree-Fock-Slater type. Relativistic wave packets are employed for the description of the continuum. The impact parameter dependence of the K-hole production in p-Ag collisions is calculated, including quadrupole contributions of the projectile Coulomb potential. The results are compared with experimental data.

This thesis describes a theoretical study of processes leading to recombination of hydrogen atoms into molecular form. A relaxation process, due to the transition among the lowest two hyperfine levels of atomic hydrogen, turns out to be of fundamental importance for the recombination rate. Models have been formulated to calculate the relaxation rate by means of quantum mechanical scattering theory. For processes in the bulk of the gas the results of an almost exact coupled-channels calculation have been compared with approximate models. In these models first-order approximations are applied, as well as approximations connected with the large distance of closest approach of the colliding hydrogen atoms. The assumptions turned out to be correct to the promille level, except for the so-called high-temperature limit.

Includes Dutch summary; 140 refs.; 23 figs.; 3 tables.

In this thesis the author presents measurements of differential cross sections for the scattering of Na-atoms in the ground-state and first excited-state by the rare gas atoms Ne and Ar. The scattering experiments were performed in a crossed-beam apparatus built and tested by van Deventer et al. The unique high angular-resolution (0.1°) of this beam-scattering apparatus permits us (i) to remove the discrepancies that still exist between the various $X^1\Sigma$- and $A^1\Pi$-potential curves for Na-Ar and Na-Ne reported up to now, (ii) to obtain detailed information on the $B^1\Sigma$-potentials for these systems and (iii) to demonstrate the necessity of taking into account the spin-uncoupling effects, in the interpretation of the experimental Na-Ne scattering patterns.

45386 (LA—10227-C-Vol.2, pp 346-357) **Introduction to electronic excitations.** Sinha, S.K. (Exxon Research and Engineering Co., Annandale, NJ). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Discussed briefly are some of the various techniques which may be used to study electronic excitations in condensed matter. Photoemission and neutron, electron and x-ray inelastic scattering are considered. Their various strengths and weaknesses are reviewed in rather general terms.

45387 (LA—10227-C-Vol.2, pp 378-383) **Inelastic electron scattering spectroscopy: a comparison of absorption and emission spectra.** Schnatterly, S.E. (Univ. of Virginia, Charlottesville). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

The operation of a high energy inelastic scattering spectrometer is briefly described. Measured absorption and emission spectra are fit to parameters in recently described models for insulators. Implications for model validity are discussed.

45388 (LA—10227-C-Vol.2, pp 577-590) **Surface vibrational spectroscopy.** Erskine, J.L. (Univ. of Texas, Austin). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

A brief review of recent studies which combine measurements of surface vibrational energies with lattice dynamical calculations is presented. These results suggest that surface vibrational spectroscopy offers interesting prospects for use as a molecular-level probe of surface geometry, adsorbate bond distances and molecular orientations.

45389 (LA—10227-C-Vol.2, pp 358) **Heavy fermion solids and their superconductivity.** Varma, C.M. (AT and T Bell Labs., Murray Hill, NJ). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Rare earth and actinide materials exhibiting Fermi-liquid behavior with characteristic effective mass of a few hundred times the free electron mass have been extensively investigated in the past decade. Recent discovery of superconductivity in some of these materials has given added impetus to the field. The theoretical problems posed by these materials are very interesting and very difficult. The principal results that must be explained by a theory and the necessary physical ingredients of such a theory are discussed. These ingredients are the spin renormalization of a single localized f-resonance in a conduction band (the Kondo effect), and the ability of an electron in such a resonance to convert to a conduction electron if the resonance is not too far from the Fermi-level and the consequent formation of a heavy band despite huge bare electron-electron repulsions. The author argues that conventional singlet pairing to make a superconducting state is very unlikely in these materials but that the interactions favor a triplet superconducting state. In fact, experiments suggest this fascinating possibility.

45390 (LA—10227-C-Vol.2, pp 359-377) **Photoemission studies of mixed valent systems.** Parks, R.D.; Raaen, S.; den-Boer, M.L.; Williams, G.P. (Polytechnic Institute of New York, Brooklyn). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2). Contract AC02-81ER10862;AC02-76CH00016.

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Photoemission spectroscopy has been used to study a number of aspects of the mixed valent state (corresponding to non-integral 4f occupation) in rare earth systems. Deep core photoemission (e.g., from 3d or 4d levels) allows the measurement of the 4f occupancy and surface valence shifts, and, as well, the indirect measurement of the effect of solid state environment on the energy of hybridization between 4f electrons and conduction electrons. 4f-Derived photoemission has been used to study surface valance and chemical shifts and to infer the nature of the mixed valent ground state. A combination of 4f-derived photoemission and add-electron spectroscopy provides a measurement of the rf Coulomb correlation energy, an important parameter in the mixed valent problem. A review of these approaches will be presented, with emphasis on Ce-based systems, whose behavior falls outside the usual description of 4f-unstable systems.

45391 (LA—10227-C-Vol.2, pp 548-558) **Internal vibrations in molecular crystals.** Howard, J. (Univ. of Durham, England). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Recent developments in the understanding of the relative intensities of INS bands (polycrystalline samples) are described together with the observation of a fundamental transition at ca 380 MeV (C-H stretching mode) uncontaminated by overtone or combination bands. Recent work (>100 MeV) on strongly hydrogen bonded complexes (CrOHO and $MFHF^-$), which have high energy modes exhibiting significant dispersion, is also discussed.

45392 (LA—10227-C-Vol.2, pp 559-576) **Localized vibrations of hydrogen in metals.** Richter, D. (Kernforschungsanlage Juelich GmbH, West Germany). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

New experimental results on local H-vibrations in transition metals are examined selecting three examples: 1) high resolution measurements of the fundamental vibrations of the H-isotopes are reviewed. In combination with the also observed higher harmonics they led to an evaluation of the anharmonic H-potential in Nb and Ta. Its knowledge is of particular importance in connection with

the fast H-diffusion mechanism in these metals. 2) Spectroscopic observations of H-trapping are surveyed. The measurements revealed detailed microscopic information, e.g. on the symmetry of the trapping sites and their degree of disturbance. Interstitial oxygen and nitrogen impurities as well as substitutional titanium in Nb were found to be strong traps which suppress the precipitation of hydride phases at low temperature, whereas Cr is a shallow trap which cannot prevent phase separation. 3) Recent results on the higher harmonics and the isotope shifts of the H-vibrations in PdH/sub x/ are discussed in view of the anomalous isotope effect of the superconducting transition temperature T/sub c/ in Pd-hydride. These measurements revealed an anharmonic but identical potential for H and D and show that anharmonicity and not an isotope dependent electronic environment causes the T/sub c/-anomaly in PdH(D).

45393 **(LA—10227-C-Vol.2, pp 479-492) (e,2e) reactions on atoms and molecules.** McCarthy, I.E. (Flinders Univ. of South Australia, Bedford Park). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

At high enough incident energy and for high enough momentum transfer an incident electron interacts with a single electron of a target atom or molecule, cleanly removing it and leaving the residual ion in one of its spectrum of quantum states. Under these conditions the dynamics of the reaction simply involves a two-electron collision, the target electron having a momentum given by the structure of the target and ion, and equal and opposite to the recoil momentum of the ion. Since two-electron collisions are well understood (Mott scattering) the reaction is the basis of the understanding of the energy and momentum structure of the target and ion known as electron momentum spectroscopy.

45394 **(LA-UR—85-2595) Gas cell neutralizers (Fundamental principles).** Fuehrer, B. (Los Alamos National Lab., NM (USA)). Jun 1985. Contract W-7405-ENG-36. 38p. (CONF-8506150—2). NTIS, PC A03/MF A01; GPO Dep. File Number DE85015747.

From Neutralizer workshop; Upton, NY, USA (5 Jun 1985).

Neutralizing an ion-beam of the size and energy levels involved in the neutral-particle-beam program represents a considerable extension of the state-of-the-art of neutralizer technology. Many different mediums (e.g., solid, liquid, gas, plasma, photons) can be used to strip the hydrogen ion of its extra electron. A large, multidisciplinary R & D effort will no doubt be required to sort out all of the "pros and cons" of these various techniques. The purpose of this particular presentation is to discuss some basic configurations and fundamental principles of the gas type of neutralizer cell. Particular emphasis is placed on the "Gasdynamic Free-Jet" neutralizer since this configuration has the potential of being much shorter than other type of gas cells (in the beam direction) and it could operate in nearly a continuous mode (CW) if necessary. These were important considerations in the ATSU design which is discussed in some detail in the second presentation entitled "ATSU Point Design".

45395 **(LA-UR—85-2596) ATSU Point Design (gasdynamics).** Fuehrer, B. (Los Alamos National Lab., NM (USA)). Jun 1985. Contract W-7405-ENG-36. 32p. (CONF-8506150—3). NTIS, PC A03/MF A01; GPO Dep. File Number DE85015746.

From Neutralizer workshop; Upton, NY, USA (5 Jun 1985).

In this presentation the basic principles outlined in the first talk "Gas Cell Neutralizers" will be applied to a problem of particular interest viz., the design of a "gasdynamic free-jet" neutralizer for the Los Alamos ATSU project. What will be presented here does not in any way represent the final gas neutralizer design for ATSU. Rather, the material presented herein should be viewed as simply a preliminary design intended to identify and gain insight into the more subtle issues that must be considered in designing this type of gas neutralizer.

45396 **(LBL—17827-Rev.) Effect of resonant microwave power on a PIG ion source. Revision.** Brown, I.G.; Galvin, J.E.; Gavin, B.F.; MacGill, R.A. (Lawrence Berkeley Lab., CA (USA)). Aug 1984. Contract AC03-76SF00098. 5p. (CONF-850504—262-Rev.). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016644.

From Particle accelerator conference; Vancouver, Canada (13 May 1985).

We have investigated the effect of applying microwave power at the electron cyclotron frequency on the characteristics of the ion beam extracted from a hot-cathode PIG ion source. No change was seen in the ion charge state distribution. A small but significant reduction in the beam noise level was seen, and it is possible that the technique may find application in situations where beam quiescence is important. 32 refs., 2 figs.

45397 **(LBL—19854) Vibrational predissociation spectroscopy of hydrogen cluster ions.** Okumura, M.; Yeh, L.I.; Lee, Y.T. (Lawrence Berkeley Lab., CA (USA); California Univ., Berkeley (USA). Dept. of Chemistry). Jun 1985. Contract AC03-76SF00098. 11p. (CONF-850605—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE85016629.

From 7. international conference on laser spectroscopy; Maui, HI, USA (24 Jun 1985).

The first infrared spectra of protonated hydrogen clusters in the gas phase have been observed. Predissociation spectra were taken with a tandem mass spectrometer: mass selected hydrogen cluster ions were irradiated inside a rf ion trap by a tunable infrared laser, and the fragment ions created by photodissociation of the clusters were mass selected and detected. Spectra for each product channel were measured by counting fragment ions as a function of laser frequency. Low resolution spectra ($\Delta\nu = 10$ cm^{-1}) in the region from 3800 cm^{-1} to 4200 cm^{-1} were observed for the ions H_5^+, H_7^+ and H_9^+ at 3910 cm^{-1}, 3980 cm^{-1}, and 4020 cm^{-1} respectively. A band was also observed for H_5^+ at 3532 cm^{-1}. No rotational structure was resolved. The frequencies of the band maxima agree well with the frequencies predicted by previous ab initio calculations for the highest modes.

45398 **(PB—85-189355) Configuration interaction in multiphoton ionization. Final report.** Zoller, P.; Matthias, E.; Smith, S.J. (National Bureau of Standards, Boulder, CO (USA). Quantum Physics Div.). 1984. 9p. Proceedings of NAGO Summer School in Quantum Electrodynamics and Quantum Optics, Boulder, CO, May 26-June 8, 1983, p313-321 1984.

The application of multichannel quantum-defect theory (MQDT) to interpretation of recent photoelectron angular distribution measurements obtained in this laboratory by resonant multiphoton excitation and ionization of atomic barium, is discussed. The pronounced effect of a doubly excited (5d7d) state acting to perturb the singly excited 6snd Rydberg series makes these angular distributions and their interpretation particularly significant.

45399 **(SAND—85-0618C) Catastrophic planar dechanneling in strained-layer superlattices.** Chu, W.K.; Allen, W.R.; Ellison, J.A.; Picraux, S.T. (North Carolina Univ., Chapel Hill (USA). Dept. of Physics and Astronomy; New Mexico Univ., Albuquerque (USA). Dept. of Mathematics; Sandia National Labs., Albuquerque, NM (USA)). 1985. Contract AC04-76DP00789. 20p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85017160.

Recently a catastrophic dechanneling effect has been discovered to occur when the wavelength of a planar-channeled ion beam matches the layer period of a strained-layer superlattice (SLS). We report continuum model calculations of planar channeled trajectories in strained-layer superlattices to obtain the depth dependence of the dechanneling due to the SLS structure for various incident angles. The calculations are in good agreement with the dechanneling measurements. In addition, features of the dechanneling versus depth calculation are found to be quite sensitive to the continuum potential near the planes and these features are experimentally resolvable. This work not only provides for the measurement of lattice strain in superlattices, but also enhances our understanding of

planar channeling and suggests a new method for comparing the accuracy of various scattering potentials. 10 refs., 5 figs.

45400 **(SAND—85-1582C) Configurational diffusion in semidilute solutions.** Martin, J.E. (Sandia National Labs., Albuquerque, NM (USA)). 1985. Contract AC04-76DP00789. 5p. (CONF-850778—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85017121.

From Polymer flow workshop; La Jolla, CA, USA (10 Jul 1985).

Dynamic light scattering measurements of the relaxation times of internal modes of single polymer chains in semidilute solution are reported for dilute high molecular weight polystyrene in a semidilute poly(vinylmethylether)/toluene host. Since PVME is index matched by toluene these light scattering measurements probe the dynamics of the isolated polystryene chains and are insensitive to the collective fluctuations of the PVME host. The principle result is that the Rayleigh linewidth scales like the third power of the momentum transfer regardless of the concentration of the semidilute polymer. This is in apparent contradiction to current theories of hydrodynamic screening in semidilute solutions, which predict a fourth power dependence for the linewidth. 9 refs., 4 figs.

45401 **(UCRL—92974) Condensed matter at high shock pressures.** Nellis, W.J.; Holmes, N.C.; Mitchell, A.C.; Radousky, H.B.; Hamilton, D. (Lawrence Livermore National Lab., CA (USA)). 12 Jul 1985. Contract W-7405-ENG-48. 14p. (CONF-850767—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE85016443.

From 15. international symposium on shock waves and shock tubes; Berkeley, CA, USA (29 Jul 1985).

Experimental techniques are described for shock waves in liquids: Hugoniot equation-of-state, shock temperature and emission spectroscopy, electrical conductivity, and Raman spectroscopy. Experimental data are reviewed and presented in terms of phenomena that occur at high densities and temperatures in shocked He, Ar, N_2, CO, SiO_2-aerogel, H_2O, and C_6H_6. The superconducting properties of Nb metal shocked to 100 GPa (1 Mbar) and recovered intact are discussed in terms of prospects for synthesizing novel, metastable materials. Ultrahigh pressure data for Cu is reviewed in the range 0.3 to 6TPa (3 to 60 Mbar). 56 refs., 9 figs., 1 tab.

45402 **Diode laser absorption spectroscopy of D_3O^+: Determination of the equilibrium structure and potential function of the oxonium ion.** Sears, T.J.; Bunker, P.R.; Davies, P.B.; Johnson, S.A.; Spirko, V. (Chemistry Department, Brookhaven National Laboratory, Upton, New York 11973). *Journal of Chemical Physics;* **83**: No. 6, 2676-2685(15 Sep 1985).

High resolution measurements of the two components of the ν_2 (umbrella) fundamental mode of the fully deuterated oxonium ion (D_3O^+) are reported. The spectra were obtained by diode laser absorption in a plasma containing D_2 and D_2O. Analysis of the observed spectra yields precise estimates of the two band origins and molecular parameters describing the states involved. By combining these data with the available high resolution data for H_3O^+, using the nonrigid invertor Hamiltonian, we are able to determine the equilibrium structure and the vibrational potential function; also we predict the inversion spectrum of D_3O^+ and the $2\nu_2—\nu_2$ hot band spectra of H_3O^+ and D_3O^+.

45403 **Comment on "Shifts of hydrogen lines from electron collisions in dense plasmas".** Iglesias, C.A.; Boercker, D.B.; Lee, R.W. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review [Section] A: General Physics;* **32**: No. 3, 1906-1907(Sep 1985).

It is shown that line-shift calculations for neutral hydrogen to second order in the atom-electron interaction are very dependent on the strong-collision cutoff procedure.

45404 **Spin dependence in superelastic electron scattering from Na(3P).** McClelland, J.J.; Kelley, M.H.; Celotta, R.J. (Radiation Physics Division, National Bureau of Standards, Gaithersburg, Maryland 20899). *Physical Review Letters;* **55**: No. 7, 688-691(12 Aug 1985).

Measurements are presented of spin asymmetries for superelastic scattering of 10-eV spin polarized electrons from the excited Na(3P/sub 3/2/) state created by linearly polarized laser optical pumping. Asymmetries as large as 16% are observed in scattering from a state which is not spin-polarized. Results are shown both as a function of scattering angle with fixed laser polarization direction, and as a function of the laser polarization direction at a fixed scattering angle.

45405 **Electron impact heated atomic hydrogen oven.** Glass, G.A.; Andersen, L.H.; Elston, S.B.; Engar, P.; Holmes, R.; Rozet, J.; Taylor, D.A.; Thoe, R.S.; Berry, S.D.; Breinig, M. (University of Tennessee and Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Review of Scientific Instruments;* **56**: No. 8, 1520-1525(Aug 1985). Contract AC05-84OR21400.

The design, construction, and performance of an electron impact heated hydrogen dissociation oven for use in producing an atomic hydrogen gas target for ion—atom collision experiments are described. This novel design utilizes an electron beam focused by a spherical lens system to heat the oven to temperatures in excess of 2400 K. High dissociation fractions are found with cell pressures $>$ or $=5$ mTorr. The compact design allows placement of an electron spectrometer close to the interaction region (length $\sim$ 1.5 cm), as well as direct measurement of the oven temperature by means of an optical pyrometer. The electron beam produces magnetic fields $\sim$ 40 mG $\sim$ 1 cm from the center of the interaction region. These low magnetic fields offer distinct advantages compared to low-voltage, high-current oven designs when observing relatively low-energy electrons ejected in ion—atom collisions.

45406 **Proton-transfer spectroscopy of 3-hydroxychromones. Extreme sensitivity to hydrogen-bonding perturbations.** McMorrow, D.; Kasha, M. (Florida State Univ., Tallahassee). *Journal of the American Chemical Society;* **105**: 5133-5134(1983). Contract AS05-78EV05855.

Further studies on the role of the excited-state proton transfer in O-hydroxychromes in the mechanism of photoautomerization have indicated that the presence of stoichiometric and substoichiometric traces of water, or other H-bonding impurities, in supposedly dry hydrocarbon solvents controls and competes with the excited-state proton transfer. The luminescence behavior of various mixtures of 3-hydroxyflavone and water from 293 to 77K is reported. At temperatures greater than 200K, the roles of water solutes are disguised; but at lower temperatures, the properties of the solvated molecules dominate the excitation processes. All spectra reported are for quick-frozen, rigid-glass samples, because all effects were noted to be strongly temperature and cooling-rate dependent. At 293K normal molecule uv absorption is very closely mimincked by the green tautomer fluorescence, while at the other end of the temperature region studies, 77K, a sharpening and a shift of the excitation spectrum to longer wavelengths were noted.

45407 **(LA—10227-C-Vol.2, pp 590-610) S(k,omega) and the eigenmodes of classical fluids.** Cohen, E.G.D.; de Schepper, I.M.; Zuilhof, M.J. (Rockefeller Univ., New York, NY). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

The lowest lying eigenmodes of a classical fluid have been approximately determined for a wide range of densities and wavenumbers. The most important eigenmodes are direct extensions of the three hydrodynamic heat and sound modes to much larger wavenumbers. A new and consistent interpretation of neutron spectra and related molecular dynamics simulations in terms of these modes is made. Also experimental predictions are discussed, some of which seem particularly suitable for investigating with spallation machines.

45408 (LA—10227-C-Vol.2, pp 456-478) **Bose Condensate in He II.** Svensson, E.C. (Atomic Energy of Canada Ltd., Chalk River, Ontario). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

The Condensate Saga, now halfway through its fifth decade, is reviewed. The recent neutron-scattering work which has at last convincingly established that there is indeed a Bose Condensate in He II is described.

(Lawrence Livermore National Lab., CA (USA); Howard Univ., Washington, DC (USA)). Aug 1985. Contract W-7405-ENG-48. 11p. (CONF-850736—61-Rev.1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85017401.

From American Physical Society topical conference on shock waves in condensed matter; Spokane, WA, USA (22 Jul 1985).

We describe a new technique for recording spontaneous Raman spectra from molecules during the passage of strong shock waves. We have used this technique to study the OH-stretch band of liquid H_2O shocked to pressure up to 26 GPa and 1700 K. The shape of the band changes over the range 7.5-26 GPa, and is described well by a two-component mixture model, implying changes in the intermolecular coupling of shock compressed water molecules. We discuss the implications of the spectra on the mechanism responsible for the electrical conductivity of shocked H_2O. 22 refs., 7 figs., 2 tabs.

45411 **(UCRL—92041) Solution of the field equations for 2-D electromagnetic direct implicit plasma simulation.** Hewett, D.W.; Langdon, A.B. (Lawrence Livermore National Lab., CA (USA)). 2 Jan 1985. Contract W-7405-ENG-48. 5p. (CONF-850659—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85016073.

From 11. international conference on numerical simulation of plasmas; Montreal, Quebec, Canada (25 Jun 1985).

A direct implicit particle-in-cell (PIC) simulation model with full electromagnetic (EM) effects has been implemented in 2-D Cartesian geometry. The model, implemented with the D_1 time differencing scheme, was first implemented in a 1-D electrostatic (ES) version to gain some experience with spatial differencing in forms suitable for extension to the full EM field in two dimensions. The implicit EM field solve is considerably different from the implicit ES code. The EM field calculation requires an inductive part as well as the electrostatic and the B field must be self-consistently advanced.

From CECAM workshop transport, interactions and instabilities in laser-plasmas; Orsay, France (24 Sep 1984).

We report results of simulations of stimulated Brillouin backscatter in which we see the second spatial harmonic of the ion density fluctuation and compare with linear, fluid theory. We also describe examples of the competition between Raman and Brillouin backscatter. 21 refs., 3 figs.

45413 **Pair distributions and energy-density functionals for liquid ^{4}He drops.** Pieper, S.C.; Wiringa, R.B.; Pandharipande, V.R. (Physics Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] B: Condensed Matter;* **32**: No. 5, 3341-3344(1 Sep 1985). Contract W-31-109-ENG-38.

The pair-distribution function $g_3(r_1,r_2)$ in drops of liquid ^{4}He is studied with the variational Monte Carlo method. It is shown that in drops having 70 or more atoms it can be approximated as a functional of the local one-particle density and the separation r_{12}. Energy-density functionals based on this approximation of g_3 give a fairly accurate description of the ground-state properties of the drops.

45414 **(CEA-N—2414) Study of particle production at 90 degrees in proton-antiproton interactions at the CERN SPS collider.** Mansoulie, B. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Dec 1984. 128p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE85752064.

Particle production at 90 degrees (with respect to the beams) has been studied with the UA2 experiment at the CERN SpantipS collider, at a center-of-mass energy of 540 GeV. We have measured the inclusive production cross sections: for π^0 in the transverse momentum range (Psub(T)) 1.5 to 15 GeV/c, for π^{+-}, K^{+-}, p and anti p from 0.45 to 2 GeV/c, for eta from 3.25 to 6 GeV/c. The measured π^0 production cross section is in good agreement with a QCD based calculation. The K/π ratio shows a clear increase with energy, the eta/π^0 ratio (0.60 +- 0.15) is compatible with the value measured at ISR energies. The fragmentation of hadron jets was studied and was found to be similar to that of the jets produced in e^+e^- annihilations. A search for directly produced electrons has given an upper limit, compatible with the expectations from a theoretical calculation.

45415 **(CERN-EP—85-64) Experimental evidence for the decay W → tau nu/sub tau/ of the charged intermediate vector boson at the CERN pantip collider.** Savoy-Navarro, A. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). 2 May 1985. 22p. (CONF-850278—5). NTIS (US Sales Only), PC A02/MF A01. File Number DE85901953.

From 5. topical workshop on proton-anti-proton collider physics; St. Vincent, Italy (25 Feb 1985).

Five events with a single hadronic high-p/sub T/ charged track and missing energy are observed in the data of the 1982 and 1983 runs. This signal rises clearly above the background due to the fluctuations of QCD bijets. We interpret these events as evidence of W → tau nu, where $tau^{+-} \rightarrow \pi^{+-}(n\pi^0)nu$. The branching ratio with respect to the electron mode is 0.96 +- 0.45 (stat.). Candidates for monojets and W → tau nu events where $tau^{+-} \rightarrow \pi^{+-}\pi^{-+}\pi^{+-}(n\pi^0)nu$ are also reported. 13 refs., 7 figs., 4 tabs.

45416 **(DESY—84-122) Total cross section γγ->hadrons.** Knies, G. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Dec 1984. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85752099.

Measurements of the total cross section for γγ-> hadrons are presented. There are new results from double-tagging (P^2not=0, Q^2not=0), single tagging (P^2approx.=0, Q^2not=0), and no-tagging (P^2approx.=0, Q^2approx.=0n experiments at e^+e^- storage rings. The measurements cover a Q^2 range from 0 to 100 GeV^2, and a W range from 2 to 20 GeV. The significance of these data for the interpretation of the photon as a set of vector mesons

(VDM) and as an electromagnetic field quantum coupling to point-like quarks (QPM) is discussed.

45417 **(DESY—85-014) Search for narrow states coupling to tau pairs in radiatiive Y decays.** Albrecht, H.; Binder, U.; Harder, G.; Hasemann, H.; Philipp, A.; Schmidt-Parzefall, W.; Schroeder, H.; Schulz, H.D.; Wurth, R.; Drescher, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Feb 1985. Contract AS09-80ER10690. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752019.

We have investigated the decay Y -> γtautau using tagged γ mesons from the decay Y' -> π+π-Y. The photon spectrum exhibits no monochromatic line corresponding to a narrow object decaying into a tau pair and is fully compatible with the expected background contributions. The branching ratio Br(Y -> tau+tau-) is determined to be (3.07 +- 0.46 +- 0.22)%.

45418 **(DESY—85-017) Measurements of tau-lepton production and decay.** Berger, C.; Genzel, H.; Lackas, W.; Pielorz, J.; Raupach, F.; Wagner, W.; Klovning, A.; Lillestoel, E.; Bussey, P.J.; Cartwright, S.L. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Feb 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752089.

We have studied 419 tau pair events produced in the reaction e^+e^- -> tau^+tau^- at a c.m. energy of 34.6 GeV. We measure the cross section and angular distribution, as well as the decay branching ratios. The production characteristics are consistent with the Standard Electroweak Model predictions of γ and Z^0 interference. The branching ratios are generally consistent with the tau decaying according to standard weak interaction principles, but we observe somewhat more decays resulting in single charged hadrons plus neutrals than are predicted by present theory.

45419 **(DESY—85-022) Search for monojet events produced by virtual Z^0 bosons in e^+e^- annihilation at PETRA.** Bartel, W.; Becker, L.; Cords, D.; Felst, R.; Hagiwara, K.; Haidt, D.; Junge, H.; Knies, G.; Krehbiel, H.; Laurikainen, P. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Feb 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752090.

A search was performed for the associated production of two different Higgs bosons via a virtual Z^0 in e^+e^- annihilation (e^+e^- -> $h_1{}^0h_2{}^0$) using the JADE detector at PETRA. This was motivated by the interpretation of the monojet events observed at the CERN panti p collider as anomalous Z^0 decays into two neutral Higgs bosons ($h_1{}^0$ and $h_2{}^0$), where $h_1{}^0$ is stable and escapes detection while $h_2{}^0$ decays into hadrons. Single- or di-jet events with large momentum imbalance are then expected at PETRA energies. No evidence for such events was found in our data; this excludes $h_2{}^0$ masses in the range of 1 to 21 GeV with 95% C.L., if the branching fraction for Z^0 -> $h_1{}^0h_2{}^0$ is larger than one half that for Z^0 -> νsub(μ) anti νsub(μ). The possibility that the monojets could originate from supersymmetric higgsino production from Z^0 decay is also examined.

45420 **(DOE/ER/03065—50) [Studies of interactions between elementary particles and nuclei]. Progress report.** (Duke Univ., Durham, NC (USA). Dept. of Physics). 1 Aug 1985. Contract AS05-76ER03065. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85016572.

Data analysis was performed on these four completed experiments: resonance production in π^+p interactions at 15.7 GeV/c, vector meson production from γp interactions at 20 GeV, particle-nucleus interactions at 100 GeV/, and a search for glueballs in π^-p → nK/sub s/K/sub s/π^0 at 25 GeV/c and a measurement of hyperon radiative decays. Progress is also reported on these experiments: charm particle production from pp interactions at 400 and 800 GeV/c, direct photon and charmonium production from 300 GeV/c (π^{+-}, K^{+-}, p^{+-}) d interactions, and a search for a quark-gluon plasma in anti pp collisions at $\sqrt{s}$ = 2 TeV. (LEW)

45421 **(DOE/ER/05861—6) Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985.** McCarthy, J.S. (Virginia Univ., Charlottesville (USA). Dept. of Physics). Aug 1985. Contract AS05-78ER05861. 39p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85016842.

Progress is reported on an experiment to study inclusive electron scattering from nuclei. Another experiment is reported that studies electroexcitation of Δ in nuclei. A Cherenkov detector was designed, constructed, and tested for permanent placement in the 1.6 GeV magnetic spectrometer detector system at SLAC. Inclusive electron scattering cross sections have been measured. Deep inelastic scattering of electrons on ^{2}H, ^{3}He, and ^{4}He was studied, and the double differential cross-sections spectra obtained are graphed. A proposed experiment to measure electron scattering from tritium and ^{3}He nuclei using a gas target system is described, including a brief description of the target system and of the recent developments in the preparation for the tritium experiment, requirements in the accuracy of the target density, and the performance of the target system used previouly. Elastic and inelastic electron scattering from the isotopes ^{198}Hg and ^{204}Hg are being examined also. 30 refs., 9 figs. (LEW)

45422 **(DOE/ER/40033—82) Experiment to measure the electron neutrino mass using frozen tritium.** Fackler, O.; Jeziorski, B.; Kolos, W.; Monkhorst, H.; Mugge, M.; Sticker, H.; Szalewicz, K.; White, R.M.; Woerner, R. (Lawrence Livermore National Lab., CA (USA); Rockefeller Univ., New York (USA); Warsaw Univ. (Poland); Waterloo Univ., Ontario (Canada); Florida Univ., Gainesville (USA); Fermi National Accelerator Lab., Batavia, IL (USA)). 25 Jun 1985. Contract AC02-81ER40033;W-7405-ENG-48;AC02-76CH03000. 11p. (CONF-850375—18). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015292.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

The authors are performing an experiment to determine the electron neutrino mass with the precision of a few eV by measuring the tritium beta decay energy distribution near the endpoint. Key features of the experiment are a 2 eV resolution electrostatic spectometer and a high-activity frozen tritium source. It is important that the source have electronic wavefunctions which can be accurately calculated. These calculations have been made for tritium and the HeT^+ daughter ion and allow determination of branching fractions to 0.1% and energy of the excited states to 0.1 eV. The authors discuss the excited final molecular state calculations and describe the experimental apparatus.

45442 **(INIS-mf—9342) Experiments at CERN in 1984.** (European Organization for Nuclear Research, Geneva (Switzerland)). Nov 1984. 330p. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781548.

This book is a compilation of the current experimental program at CERN. The experiments listed are being performed at one of the following machines: the Super Proton Synchrotron (SPS), the Proton Synchrotron (PS) and the Synchro-Cyclotron (SC). The Intersecting Storage Rings (ISR) have ceased functioning early this year. The four approved experiments to be done by means of the Large Electron Positron machine (LEP) are also listed.

45443 (INIS-mf—9489, pp 427-487) **Physics at the pp-bar collider.** Humpert, B. (European Organization for Nuclear Research, Geneva (Switzerland)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The pp-bar collider at the CERN-SPS will soon be ready for experimentation up to 540 GeV center-of-mass energy. Aiming at an evaluation of the physics in this new energy range we assemble significant results from present accelerators and from cosmic-ray analyses together with the theoretical interpretations. Their extrapolation to collider energies leads to a wealth of predictions which await to be tested. (author).

45444 (INIS-mf—9489, pp 84-101) **What can we learn from structure functions measured in neutrino interactions.** Eisele, F. (Dortmund Univ. (Germany, F.R.). Abt. Physik). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The new measurements of structure functions by the CDHS-collaboration are substantially improved compared to published results. It is discussed how much we can learn from these data about QCD and the gluon distribution by the analysis of moments and of the full x-dependence. It is shown that these new data combined with SLAC ed-data are able to separate QCD-effects from higher twist and other possible non perturbative effects within "reasonable" assumptions. The presence of non perturbative contributions is required at large x (x larger or equal 5) and low Q^2 only. Their shape and magnitude agree well with popular models of diquark contributions. The analysis results in a value of Λsub(MS-bar) = .2 +- .1. (author).

45445 (INIS-mf—9489, pp 383-401) **Review of proton lifetime experiments.** Engels, E. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique des Particules Elementaires; Pittsburgh Univ., PA (USA)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The experiments on instability of the nucleon carried out in University of Pensylvania, Osaka University as well as in the frame work of Orsay-Palaiseau-Sacley-Wuppertal collaboration are described. (A.S.).

45446 (INIS-mf—9489, pp 75-80) **Prompt single muon production by protons on iron.** Bodek, A.; Breedon, R.; Coleman, R.N. (Rochester Univ., NY (USA)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

A new experiment has been performed at Fermilab to measure the hadronic production of prompt single muons. A preliminary analysis of a sample of the data indicates approximately equal production of prompt single μ^+'s and μ^-'s in 350 GeV p-Fe interactions. The observed momentum distributions of prompt single μ^+'s and μ^-'s can satisfactorily be fit by the hypothesis of central production of D mesons with a cross section of 16 +- 4 μb/nucleon.

45447 (INIS-mf—9489, pp 103-123) **Neutrino oscillations - present and future experiments.** Wotschack, J. (European Organization for Nuclear Research, Geneva (Switzerland)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The general conception of neutrino oscillations is shortly described and the review of present experimental results is given. However the obtained results are not convincing evidence for existence of neutrino oscillations nevertheless they throw some light on this phenomenon. The programs of future experiments in Brookhaven, Los Alamos and CERN are briefly presented.

45448 (INIS-mf—9489, pp 125-133) **Neutron and proton structure functions from inelastic antineutrino scattering in deuterium.** Flaminio, V. 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The scattering of neutrino/antineutrino on neutrons and protons carried out at CERN-SPS at 10 GeV is described. The obtained results are compared with theoretical models. In particular the x and y - distributions of quarks having definite flavours and the values of the ratios of cross sections intergrated over kinematical variables Σ(ν-barsub(n)) / Σ(νsub(ν)) and Σ(νsub(n)) /

Σ(νsub(p)) for cc-bar interactions are given and compared with Field and Feynman predictions as well as Buras - Gaemers model.

45449 (INIS-mf—9489, pp 9-44) **Aspects of experimental high transverse momentum physics.** Geist, W.M. (European Organization for Nuclear Research, Geneva (Switzerland)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

New results from experiments looking for large transverse momentum processes in hadron interactions are discussed. Multiparticle final states associated with a single high psub(T) particle show clear jet structure. Properties of these jets and inclusive single particle spectra indicate that, in addition to valence quarks, gluons contribute substantially to high psub(T) phenomena. Evidence for multijet production is briefly presented. Data from calorimeter experiments, which aim at a detection of the total jet energy, do not show jet structure.

45450 (INIS-mf—9489, pp 45-68) **Experimental review of some predictions of the Drell Yan model in hadroproduction of dimuons.** Burgun, G. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique des Particules Elementaires). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

Some known models of hadron-hadron interaction (Drell-Yan and twist model of Berger and Brodsky) are presented. Comparison between the experimental data on hadroproduction of dimuons and the predictions of the Drell-Yan model as to angular distribution, absolute cross section, beam dependence and scaling is given.

45451 (INIS-mf—9489, pp 187-196) **New O^-S meson and new results on the 1^+S state in the 3π system coherently produced on nuclei; 5π coherent production on nuclei.** Bellini, G.; Di Corato, M.; Frabetti, P.L. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

About 120000 events of the three-pion production on Be, C, Al, Si, Ti, Cu, Ag, Ta and Pb targets were studied at 40 GeV at the Serpukhov PS accelerator. Also about 15000 events of the five-pion production on the some nuclei were investigated.

45452 (INIS-mf—9753) **Energy dependence of proton-proton and antiproton-proton scattering at the CERN intersecting storage rings.** Botje, M.A.J. (Rijksuniversiteit Utrecht (Netherlands)). 6 Dec 1984. 163p. NTIS (US Sales Only), PC A08/MF A01. File Number DE85781538.

Includes Dutch summary; 97 refs.; 60 figs.; 19 tabs.

This thesis describes measurements of proton-proton and proton-antiproton elastic scattering with the scattered particles emerging at small angles in the centre of mass (CM) system. These measurements have been performed at the CERN Intersecting Storage Rings (ISR). The direct comparison of pp and anti pp scattering in this energy range is of considerable interest. This is because measurements on pp scattering alone, have revealed that in the ISR energy range both elastic- and total pp cross-sections increase with increasing energy. It is the subject of this thesis to check the prediction that the proton-antiproton cross section will do the same. The present experiment measures the angular distribution of pp and anti pp elastic scattering at small angles (typically 1-10 mrad) and at different energies. From these measurements a comparison of the energy behaviour of the pp and anti pp forward nuclear scattering amplitudes is obtained. This behaviour can be described in terms of three parameters: the total cross-section, the ratio of the real-to-imaginary part of the forward nuclear amplitude and a parameter, the slope, characterising the dependence of the process on the squared four-momentum transfer between the incident and the scattered particle.

45453 (LAPP-T—84-02) **Measurement of $\pi 0$ inclusive production cross sections in proton-antiproton interactions at $\sqrt{s}$=540 GeV at CERN.** Cuillerey, R. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules; Grenoble-1 Univ., 38 - La Tronche (France)). Jun 1984. 134p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE85752066.

The measurement of the π^0 inclusive yield cross-section is the main point of this research from the UA1 collaboration at CERN. This measurement and its comparison with the jet yield, allows to conclude in favour of some important predictions of the theoretical model of partons. The π^0 distribution also allows to an estimation of the background over the W identification through the channel $W \rightarrow e+\nu$sub(e).

45454 (NIKHEF-H—84-16) **New experimental results in two-photon physics.** Paar, H.P. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Dec 1984. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701931.

New experimental results in two-photon physics are discussed. The subjects covered are total cross-section, the ratio of hadron to muon production, structure functions in inelastic lepton-photon scattering and exclusive resonance production. It is shown that these processes are well described by QCD, augmented by quark parton model and vector meson dominance notions. Some aspects of the data for exclusive resonance production may be interpreted as evidence for glueballs.

45455 (SLAC—283) **Workshop on e^+e^- physics at high luminosities: proceedings.** (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). May 1985. Contract AC03-76SF00515. 391p. (CONF-8411186—; CONF-8504155—). NTIS, PC A17/MF A01; 1; GPO Dep. File Number DE85016524.

From Workshop on e+e- physics at high luminosities; Stanford, CA, USA (30 Nov 1984).

Separate abstracts were prepared for 10 papers in this workshop proceedings. (LEW)

45456 (SLAC-PUB—3643) **Spectroscopy of the Y(2S) with the Crystal Ball.** Irion, J. (Stanford Linear Accelerator Center, Menlo Park, CA (USA); Harvard Univ., Cambridge, MA (USA). Dept. of Physics). Apr 1985. Contract AC03-76SF00515. 9p. (CONF-8504133—9). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015970.

From International conference on hadron spectroscopy; College Park, MD, USA (20 Apr 1985).

The Crystal Ball experiment has been taking data at the DORIS II storage ring at DESY/Hamburg on the Y(2S) and Y(1S) resonances since summer 1982. Results on the hadronic transitions between the Y(2S) and the Y(1S) are presented as well as measurements of the radiative decays of the Y(2S) to the chi/sub b/ states in inclusive and exclusive channels. The exclusive $Y(2S) \rightarrow \gamma$chi/sub b/ $\rightarrow \gamma\gamma Y(1S) \rightarrow \gamma\gamma l^+l^-$ sample allows a study of the spins of the chi/sub b/ states. Also discussed is the present status of the zeta(8.3) in the radiative decays of the Y(1S). 22 refs., 14 figs.

45457 **Study of D/sup / production in high-energy γp interactions.** Sliwa, K.; Appel, J.A.; Biel, J.; Bintinger, D.; Bronstein, J.; Daum, C.; Mantsch, P.M.; Nash, T.; Purohit, M.V.; Schmidke, W. (Fermi National Accelerator Laboratory, Batavia, Illinois 60510). *Physical Review* [*Section*] *D: Particles and Fields;* **32**: No. 5, 1053-1060(1 Sep 1985).

We have studied D(production mechanisms using data from a photoproduction experiment at the Fermilab Tagged Photon Spectrometer. A large sample of charged D('s was selected via the clean signature of the cascade decay $D(\rightarrow D^0\pi^+$ and subsequently $D^0 \rightarrow K^-\pi^+$ or $D^0 \rightarrow K^-\pi^+\pi^0$. The cross section for the process $\gamma p \rightarrow$(D/sup asterisk+/+anything)p at an average energy of 105 GeV was measured to be 88 +- 32 nb. Only (11 +- 7)% of D('s were found to be consistent with being accompanied solely by a D-bar(or a D-bar; the remaining events contain additional particles. The distribution of the production angle of the D(in the photon-fragmentation-system center of mass is strongly anisotropic and

consistent with the form f(θ() = cos⁴θ(. We set a limit on the associated-production-process cross section σ(γp→(D-bar/sup asterisk-/+anything)Λ/sub c/) <60 nb (90% C.L.).

45458 Triggered-bubble-chamber study of the reaction $\pi^+ p \to \Delta^{++} \pi^0 \pi^0$ at 16 GeV/c. Clark, R.K.; Barlow, P.M.; Diamond, R.N.; Hagopian, V.; Lannutti, J.E.; Spencer, C.M.; Ferguson, M.; Glanzman, T.; Goshaw, A.T.; Lucas, P. (Florida State University, Tallahassee, Florida 32306). *Physical Review [Section] D: Particles and Fields;* **32**: No. 5, 1061-1070(1 Sep 1985).

The SLAC 40-inch bubble chamber augmented by an array of lead-glass detectors was used to study the reaction $\pi^+ p \to \Delta^{++} \pi^0 \pi^0$ at 15.7 GeV/c. No new high-mass neutral mesons are seen at a sensitivity of 14.2 events/μb. A moments and amplitude analysis indicates that only S and D waves contribute to the $\pi^+ \pi^- \to \pi^0 \pi^0$ cross section. A one-pion-exchange-model calculation is performed using phase-shift measurements from other experiments. The older phase shifts from Estabrooks and Martin are in better agreement with our data than are the more recent ones of Biswas et al.

45459 Measurement of $e^+ e^- \to \mu^+ \mu^-$: A test of electroweak theories. Adeva, B.; Becker, U.; Becker-Szendy, R.; Berdugo, J.; Boehm, A.; Branson, J.G.; Burger, J.D.; Capell, M.; Cerrada, M.; Chang, C.C. (III. Physikalisches Institut, Technische Hochschule, D-5100 Aachen, Federal Republic of Germany; Brookhaven National Laboratory, Upton, New York 11973; California Institute of Technology, Pasadena, California 91125; Deutsches Elektronen Synchrotron DESY, D-2000 Hamburg 52, Federal Republic of Germany;). *Physical Review Letters;* **55**: No. 7, 665-668(12 Aug 1985).

We use the reaction $e^+ e^- \to \mu^+ \mu^-$, in the Mark J detector at the DESY high-energy $e^+ e^-$ collider PETRA, to test the standard electroweak theory and find good agreement. We also set limits on the parameters of several extended gauge theories.

45460 (DESY-L-Trans—300) Search for light particles with charge 2/3 in $e^+ e^-$-annihilaton. Bondar, A.E.; Kuradze, L.M.; Lelchuk, M.Yu.; Panin, V.S.; Sidorov, V.A.; Chilingarov, A.G.; Schwarz, B.A.; Eidelman, S.I. Translated from *Pis'ma v Zhurnal Eksperimental'noi i Teoreticheskoi Fiziki ;* **40**: No. 10, 324-327(1985). 5p. Deutsches Elektronen-Synchrotron (DESY), Hamburg, Germany, F.R.

Translated from Russian.

The upper limit for the production cross-section of particles with charge 2/3 and a mass up to 0.4 GeV in the reaction $e^+ e^-$ -> qanti q:sigmasub(qq) / sigmasub(μμ) < 10^{-4} has been determined by means of the detector OLYA of the collider VEPP-2M. This limit was two orders lower than the results of previous experiments sensitive to quarks of small mass.

45461 Ksup(*+-)(892) production in $\pi^- N$ interactions at 200 GeV/c. Napier, A.; Schneps, J. (Tufts Univ., Medford, MA (USA)); Chen, T.Y.; Jenkins, E.W.; Lai, K.W.; Le Britton, J.; Lin, Y.C.; Pifer, A.E. (Arizona Univ., Tucson (USA)); Fenker, H.C.; Green, D.R. (Fermi National Accelerator Lab., Batavia, IL (USA)). *Physics Letters, [Section] B;* **149**: No. 6, 514-518(27 Dec 1984).

Ksup(*+-) (892) production is studied in the reaction $\pi^- N$ -> Ksub(s)°Ksub(s)°+X where X includes up to five observed charged particles. An excess of Ksup(*-) over Ksup(*+) is observed for Feynman-chi > 0.1. The ratio of Ksup(*+) to Ksup(*-) decreases with chi as predicted by QCD counting rules. Ksub(s)° and Ksup(*) production are compared to recent D and Dsup(*) data from other experiments.

45462 Observation of two non-leading strangeness-one vector mesons. Aston, D.; Dunwoodie, W.; Durkin, S.; Honma, A.; Hutchinson, D.; Johnson, W.B.; Kunz, P.F.; Lasinski, T.; Leith, D.W.G.S.; Levinson, L. (Stanford Linear Accelerator Center, CA (USA)). *Physics Letters, [Section] B;* **149**: No. 1-3, 258-262(13 Dec 1984).

We present evidence for the existence of two strange Jsup(P)=1^- mesons; one at 1410 MeV/c^2 coupling principally to Ksup(*)(892)π, and the other at 1790 MeV/c^2 coupling to Kπ, Ksup(*)π and rhoK. The data derive from a partial wave analysis of the anti $K^0 \pi^+ \pi^-$ system produced in the reaction $K^- p$ -> anti $K^0 \pi^+ \pi^- n$ at 11 GeV/c. The production mechanism and quark model assignment of each state are discussed. The state at 1410 MeV/c^2 is most naturally understood as the first radial excitation of the Ksup(*)(892), and the 1790 MeV/c^2 object can be interpreted as the triplet D wave partner to the 3^- Ksup(*)(1780).

45463 Study of charm production in proton-proton interactions at $\sqrt{s}$ = 62 GeV with a forward K-trigger. Gorbics, M.S. Ames, Iowa; Iowa State Univ. (1984). 65p. University Microfilms Order No. 85-05,819.Contract W-7405-ENG-82.

Thesis (Ph. D.).

The production of charm mesons D/sup */ and D and their subsequent decays D/sup *+/ → $D^0 \pi^+$ and $D^0 \to K^- \pi^+$ have been observed in proton-proton interactions at the CERN Intersecting Storage Rings. Using published data for inclusive K^- and anti p cross sections as normalization, the D/sup *+/ production cross section is estimated. For a model with the D/sup *+/ produced with a Feynman-x (x/sub F/) distribution of the form (1 - x/sub F/)³ and a transverse momentum distribution of the form P/sub t/ sup */exp(-P/sub t/²), the D/sup *+/ production cross section is estimated to be 23.5 +/- 8.4 μb. This measurement is approximately the same as measurements by other experiments of charm meson production at lower energies. Two other experiments have measured the D^0 production cross section at the author's energy and obtained a result more than ten times higher than the author's. Thus, the author's measurement provides a possible resolution to what had been an unclear situation in regard to the energy dependence of charm production.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

I review the possibility that the underlying theory of weak interactions possesses a family symmetry, either global or local. The spontaneous symmetry breaking of this symmetry leads to important phenomenological implications: the existence of Goldstone bosons, the familons in the case of global symmetry and the existence of mirror fermions, in the case of local symmetry (in the context of grand unification). Both alternatives will soon be tested. 13 refs.

45465 (CBPF-NF—002/84) Diffractive dissociation in $pp \to \Delta^{++} \pi^- p$. 2. Slope-mass-partial wave correlation. Antunes, A.C.B.; Santoro, A.F.S.; Souza, M.H.G. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro). 1984. 35p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701926.

Partial wave amplitudes are calculated and the results obtained for the slope-mass-partial wave correlation are given.

45466 (CEA-CONF—7248) A-dependence of deep inelastic lepton-nuclear scattering from 6-quark clustering. Chemtob, M.; Peschanszi, R. From 8. international workshop on condensed matter theories; Granada, Spain (17 Sep 1984).

The old problem of the ground state energy of quantum many fermions systems is studied. This approach is to expand the energy in a double series, The Fermi momentum and the strength of the attractive part of the potental.

45468 (CERN—84-15, pp 63-77) **Antiproton production.** Allaby, J.V. 20 Dec 1984. NTIS (US Sales Only), PC A24/MF A01. File Number DE85701982. (CONF-831079—).

From CERN Accelerator School course on antiprotons for colliding beam facilities; Geneva, Switzerland (11 Oct 1983).

The basic definitions used in the physics literature on particle production are reviewed. The data on anti p production are interpreted in order to provide an estimate of the yield of anti p's from typical target at the antiproton accumulator, including the effects of re-absorption in the target.

45469 **(DESY—85-024) Improved continuum limit lattice action for QCD with Wilson fermions.** Sheikholeslami, B.; Wohlert, R. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Mar 1985. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85752093.

Two possible ways of extending Symanzik's improvement programme to lattice fermions namely improvement to first and second order in the lattice spacing 'a' are discussed. The corresponding lattice actions for fermions are constructed and tree level improvement conditions are derived by considering classical improvement. The concept of on shell improvement is generalized to the lattice fermions studied here and the free parameters are determined for O(a) and O(a^2) on shell improved actions to all orders of perturbation theory. No evidence is found that the complicated structure of the O(a^2) on shell improved action especially the arising fermion contact terms can be removed beyond tree level. The effect of terms in the action that explicitly break chiral symmetry and therefore remove the phenomenon of species doubling are investigated by considering the energy momentum relations of the arising tree level improved actions. Our main result is that the O(a) improved action is a slightly modified Wilson fermion action which can still be written with only nearest neighbour fermion interactions.

45470 **(DESY—85-025) Excited lepton production at LEP and HERA.** Hagiwara, K.; Zeppenfeld, D.; Komamiya, S. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Mar 1985. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752130.

General expressions for single and pair production cross sections of excited leptons (esup(*), μsup(*), νsup(*)) are presented. Specific results are shown for a realistic SU(2) x U(1) invariant model. Pair production in e^+e^- annihilation can measure anomalous magnetic moments of excited leptons. Single production of e* is dominated by the t-channel γsup(*) exchange contribution which makes its detection feasible up to masses just below the e^+e^- c.m. energy. Due to this small vertical stroketvertical stroke enhancement effect, contributions from elastic and resonance scattering in ep production of esup(*) are substantial. Realistic estimates of the excited lepton production cross section at HERA are given.

45471 **(DESY—85-032) Light gluino scenario.** Barger, V.; Jacobs, S.; Woodside, J.; Hagiwara, K. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Apr 1985. 35p. (MAD/PH—232). NTIS (US Sales Only), PC A03/MF A01. File Number DE85752132.

We investigate in detail the consequences of the supersymmetry scenario with a light (proportional 5 GeV) gluino and heavy (proportional 100 GeV) squarks, including gluino distribution and fragmentation effects, proposed to explain large missing psub(T) events observed at the CERN p anti p collider. The effective gluino distribution in the nucleon is evaluated using the Altarelli-Parisi equations. Ambiguities in evaluating squark production with the effective gluino distribution are discussed. A plausible gluino fragmentation function is deduced from heavy-quark fragmentation functions; scaling violations in the gluino fragmentation function are taken into account. Fragmentation effects drastically reduce the missing psub(T) in light gluino jets. The present collider data do not rule out a light gluino with mass in the range of 3-5 GeV even if the anti g lifetime, from decay into a photino and a quark pair, is short.

45472 **(DOE/ER/10713—1) Theory of weak interactions and related topics. Progress report, January 1-December 31, 1980.** Marshak, R.E. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1985. Contract AS05-80ER10713. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016839.

The work reported included an effort to understand the physical meaning of the U(1) hypercharge group in the accepted electroweak SU/sub L/(2) x U(1) group, as well as other facets of the electroweak structure (e.g., the persistence of the V-A charged current despite the finite masses of the quarks and leptons, the meaning of quark-lepton symmetry for all three generations). It was shown that, unlike the case of the SU(2)/sub L/ x U(1) model, the vector U(1) generator in the SU(2)/sub L/ x SU(2)/sub R/ x U(1) model can be identified with (B-L) symmetry. Consequences were explored of the idea that the breakdown of parity is related to the non-conservation of global B-L. One consequence is that two Majorana neutrinos, one light and one extremely heavy, are predicted for each generation. Also examined were the questions of the magnitudes of various B-violating amplitudes and the kinds of selection rules governing these processes. 18 refs. (LEW)

45473 **(DOE/ER/10713—2) Theory of weak interactions and related topics. Progress report, January 1-December 31, 1981.** Marshak, R.E. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1985. Contract AS05-80ER10713. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016838.

The research program demonstrated that the acceptance of B-L local symmetry as the weak hypercharge, whose spontaneous breakdown was connected to the spontaneous breakdown of parity, predicted a light electron neutrino (Majorana) and a related heavy neutrino. The prediction of neutron oscillations following from the PUT group SU(4)/sub C/ x SU(2)/sub L/ x SU(2)/sub R/ was scrutinized. A relation was derived between the mixing time for free neutron oscillations and the lifetime for nuclear stability with respect to $\Delta B = 2$ transitions, and a study was conducted of the effect of time-varying or spatial-varying magnetic fields on the mixing time of neutron oscillations. Reasons are given for continuing work with the left-right symmetry (LRS) and partial unification theory (PUT) groups to their grand unification realization. It was shown that, without assuming a simple GUT group, that the color group has to be SU(3) and that the only possible GUT groups are SU(5) and SU(10). The gauge boson mass relation was derived for arbitrary Higgs structure associated either with the standard SU(2)/sub L/ x U(1) electroweak group or the LRS group. Also examined was the Pati-Salam type of grand unification. 31 refs. (LEW)

45474 **(DOE/ER/10713—3) Theory of weak interactions and related topics. Progress report, January 1, 1982-February 28, 1983.** Marshak, R.E. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1985. Contract AS05-80ER10713. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016837.

Progress is reported in these areas: B-L vs V-A gauge groups; work on neutron oscillations; preon models of quarks and leptons; partial unification theory (PUT); extensions of standard electroweak group; composite weak bosons; quasi-solitons in electroweak gauge groups; and weak CP nonconservation. 18 refs. (LEW)

45475 **(DOE/ER/10713—4) Theory of weak interactions and related topics. Progress report, March 1-December 31, 1983.** Marshak, R.E. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1985. Contract AS05-80ER10713. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85016836.

Progress is reported in these areas: extensions of the standard electroweak model; neutron oscillations; partial unification and grand unification - SU(4)/sub C/ x SU(2)/sub L/ x SU(2)/sub R/ and SO(10) groups; preon models of quarks and leptons; solitons and anomalies in gauge theory. 41 refs. From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

Hyperon polarization in inclusive and exclusive processes is explained by multiple scattering of the strange quark. Energy, Feynmann x and transverse momentum dependence is discussed, relations between polarizations of different hyperons in various processes are given. The charmed and bottom baryons are predicted to be analogically polarized.

45505 (INIS-mf—9489, pp 197-206) **Two particle correlations in pion-nucleus interactions at 40 GeV/c.** Abrosimov, A.T. (Moskovskij Gosudarstvennyj Univ. (USSR)); Bellini, G.; Di Corato, M (Milan Univ. (Italy). Ist. di Fisica). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

Multiplicity distributions and two-particle correlation functions are presented for shower particles with pseudorapidity eta > 1 produced in π^- interactions on C, Al, Cu, Pb targets at incident pion momentum 40 GeV/c. Results are compared with the π^-p data. No noticeable differences were found between the nuclear and elementary distributions of the correlation function. The data are compared with the predictions of the additive quark model and the quasieikonal model.

45506 (INIS-mf—9489, pp 141-186) **Hadroproduction of charmed particles.** Muller, F. (European Organization for Nuclear Research, Geneva (Switzerland)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

Experimental results of various experiments pp→ DD-barX or pp→Asub(c)D-barX (x=single lepton, neutrino beam dump, beam-dump muon) are presented and discussed. The methods of detection of charmed particles via some characteristic feature of their decays are described.

45507 (IPNO-TH—83-35) **Self-consistent light-quark qqq and qq anti q anti q mass spectrum.** Balazs, L.A.P.; Nicolescu, B. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Jun 1983. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751163.

Recently, an improved approximate self-consistent dual topological unitarization technique has been developed, in which the effect of planar "sea"-quark loops is taken into account from the beginning. This is applied to qqq and qq anti q anti q hadrons with q=u, d, s, and good agreement is obtained with experiment. In particular, we predict 2^- and 3^+ A anti p states which could be identified with recently observed broad resonances of mass 2.20 and 2.33 GeV.

45508 (LAPP-TH—82) **Properties of the W boson in some composite models.** Girardi, G.; Narison, S.; Perrottet, M. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jul 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751166.

We analyze the effects of some electroweak interaction models with a composite W at present energies. We find that the width of the W into pairs of pseudoscalar bosons can be appreciable and may reduce its leptonic branching ratio by about 20%. The front-back asymmetry of leptons at the proton-antiproton collider is similar to the one obtained in the standard model.

45509 (LAPP-TH—100) **High Psub(T) prompt photons in pp and p anti p collisions as a test of perturbative QCD.** Douiri, A. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Mar 1984. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751165.

The results of the complete O(αsub(s)sup(2)) calculation of high Psub(T) prompt photons in pp and p anti p collisions are reviewed. The corrections show a strong dependence on the factorization prescription and scale. Our numerical predictions are confronted with the ISR and UA2 data; good agreement is found.

45510 (LAPP-TH—116) **Formation and stability of quantised (non-abelian) magnetic monopoles: a lattice Monte Carlo study.** Schierholz, G.; Seixas, J.; Teper, M. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jul 1984. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752041.

We put the Georgi-Glashow model on a lattice, and use Monte Carlo techniques to investigate the quantum physics of its monopoles. For appropriate bare couplings the monopoles are stable (suggesting that theories in which the Higgs scalars are composite will also generate monopoles). We show how the history of a monopole depends on the volume of space-time in which it is originally created; anti-monopoles usually appear in "hot-spots" on the domain wall separating the monopole from the rest of the universe, and these may annihilate with the monopole, or they may form a quasi-stable system. We observed how a condensation of "(anti)-monopole" vacuum fluctuations can restore the broken symmetry. We also observe that in the BPS limit quantum fluctuations restore the symmetry, so that in that limit there are no monopoles.

45511 (LPC—84-28) **Processes related to photon-photon collisions.** Kessler, P. (College de France, 75 - Paris. Lab. de Physique Corpusculaire). Nov 1984. 31p. (CONF-8409194—7). NTIS (US Sales Only), PC A03/MF A01. File Number DE85752065.

From 6. international workshop on photon-photon collisions; Lake Tahoe, CA, USA (9 Sep 1984).

Two types of processes, related to photon-photon collisions, are considered: deep inelastic Compton scattering, and photon pair production. The relevant theoretical and experimental literature is reviewed.

45512 (LYCEN—8460) **Elastic slopes and diffraction.** Giffon, M.; Predazzi, E. . (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire). Sep 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752042.

It is well known that elastic hadronic slopes grow with energy and appear sizeably larger when measured very close to t=0 than at intermediate t-values. This has been confirmed by the recent anti-p p measurements at the CERN SPS-Collider. By comparing the data with a formula derived recently which gives the slope as a function of the four momentum transfer squared t and of the average multiplicity <N> we argue that all the basic properties of hadronic slopes may be attributed to the role of multiparticle unitarity, i.e. to diffraction.

45513 (NIKHEF-H—84-14) **Remarks on nucleon-nucleon hard scattering.** Wolters, G.F. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Oct 1984. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701927.

Spin asymmetry and correlation parameters for elastic nucleon-nucleon scattering at high psub(T)^2 are considered. Helicity non-conservation is not found to be important at 90°sub(CM) in the medium energy range. The only proposed explanation of large asymmetry in pp scattering, available at present, runs short in confrontation with experimental evidence.

45514 **(NIKHEF-H—84-15) Two-loop large Higgs mass corrections to vector boson self-couplings.** Bij, J.J. van de. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Oct 1984. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701922.

The two-loop corrections to the three-vector boson vertices are calculated in the limit of large Higgs mass. Corrections growing quadratically with the Higgs mass appear in the anomalous magnetic moment of the charged vector boson and the corresponding $W_0W^+W^-$ coupling. Also the weak coupling constant in the $W_0W^+W^-$ vertex receives a correction compared to the coupling in β-decay. The results suggest a break-down of perturbation theory for a Higgs mass of 3.4 TeV and larger.

45515 **(SI—82-12) Infrared regularization dependence of the asymptotic behavior of the Sudakov form factor in QCD.** Ohrndorf, T. (Siegen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 7 -Naturwissenschaften 1 (Physik)). 1982. 24p. Fachinformationszentrum Energie, Physik, Mathematik G.m.b.H., Eggenstein-Leopoldshafen, Germany, F.R.

We report the results of an explicit calculation of the leading contributions including O(asub(s)^3) corrections to the asymptotic behavior of the quark form factor in QCD in the limit of large virtual mass of the photon. In contrast to previous investigations we regularize infrared singularities by keeping either one (ON/OFF), or both quarks (OFF) off shell, or both quarks on shell (ON) and employing dimensional regularization in addition. Up to the investigated order our final result is represented by the beginning of an exponential series, no matter which regularization prescription is chosen. We give a representation which comprises the three limits of the form factor in a uniform manner.

45516 **(SI—84-3) Spinless bosons in electron-positron annihilation.** Bopp, F.W.; Brandt, S.; Dahmen, H.D.; Schiller, D.H.; Waehner, D. (Siegen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 7 -Naturwissenschaften 1 (Physik)). 1984. 42p. Fachinformationszentrum Energie, Physik, Mathematik G.m.b.H., Eggenstein-Leopoldshafen, Germany, F.R.

The contribution to the processes $e^+e^- \to \mu^+\mu^-$, q anti q, $\gamma\gamma$, e^+e^- mediated by scalar and/or pseudoscalar bosons are calculated. The constraints on their coupling constants and their masses are investigated as they arise from the radiative decay $Z^0 \to e^+e^-\gamma$ and from the experimental data for the annihilation processes into lepton, photon and quark pairs. Data on $e^+e^- \to \mu^+\mu^-$, $\gamma\gamma$ and e^+e^- seriously reduce the domain of coupling constants to leptons and photons still allowed by the probable value of the width of $Z^0 \to e^+e^-\gamma$. Experiments $e^+e^- \to \mu^+\mu^-$, $\gamma\gamma$, e^+e^- at 45 GeV c.m.s. energy with a sensitivity of 10% will decide about the existence of a heavy spinless boson with the presumed phenomenological couplings to leptons and photons. Assuming universality of the coupling to leptons and quarks a conservative bound on the contribution to R arising from spinless boson exchange is already in conflict with the presumed radiative width of $Z^0 \to e^+e^-\gamma$. (The extension of this preprint compared to the previous version of Si-83-24 consists mainly in the inclusion of Bhabha scattering.) (orig.).

45517 **(SI—84-9) Sudakov form factor beyond the leading logarithmic approximation.** Ohrndorf, T. (Siegen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 7 -Naturwissenschaften 1 (Physik)). Jul 1984. 67p. Fachinformationszentrum Energie, Physik, Mathematik G.m.b.H., Eggenstein-Leopoldshafen, Germany, F.R.

We present the general form of the asymptotic behavior of the massless electron-photon vertex function in quantum electrodynamics in the limit where q^2, the virtual mass of the photon, becomes large. All the logarithms in q^2 are taken into account, whereas inverse powers of q^2 are neglected. In contradistinction to previous investigations we consider the off-shell vertex function and work in the Feynman gauge. Extensive use is made of the α-representation of Feynman integrals.

45518 **(UWThPh—85-02) Decay of the top-quark.** Klein, M.; Pietschmann, H.; Rupertsberger, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701925.

T-decay life-time is related to the Kobayashi-Maskawa matrix elements in the free quark model as well as in a semi-phenomenological approach. The semi-leptonic branching ratio is also given.

45519 **(UWThPh—85-07) CP violation and left-right symmetry.** Ecker, G.; Grimus, W. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 44p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701928.

We investigate minimal L-R symmetric gauge models with spontaneous CP violation. The effective 'ΔS'=1.2 Hamiltonians are calculated giving special attention to a careful evaluation of QCD corrections. Two classes of models are distinguished by the sign of the L-R contribution Δmsup(LR)sub (Ksub(L)Ksub(S)) to the Ksub(L)Ksub(S) mass difference. Requiring 'Δmsup(LR)sub (Ksub(L)Ksub(S)) ' <= Δmsup(exp)sub (Ksub(S)Ksub(L)) leads to the lower bounds M_3 greater than or approximate 2.5 TeV, Msub(H) greater than or approximate 10 TeV for the heavy charged vector boson and neutral Higgs mass, respectively. Epsilon, epsilon' and the neutron electric dipole moment dsub(n) are computed in the small-phase approximation. The experimental value of epsilon can be reproduced with M_3 in the several TeV range. Epsilon'/epsilon may have either sign and is strongly correlated with dsub(n). Depending on the sign of Δmsup(LR)sub (Ksub(L)Ksub(S)), we find 'epsilon'/epsilon' less than or approximate (4 or 6) x 10^{-3} and 'dsub(n)' less than or approximate (4 x 10^{-25} or 3 x 10^{-26}) e. cm.

45520 **(UWThPh—85-09) Decay of heavy quarks.** Pietschmann, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701929.

The decay of heavy quarks (b and t) is studied with the help of spectral functions. As much information as possible is taken directly from experiment. Older computations in the free quark approximation are supported. This is important for the extraction of Kobayashi-Maskawa matrix elements from experiments.

45521 **Coupling charmonium to the charmed-meson sector.** Jaronski, W.S.; Robson, D. (Department of Physics, Florida State University, Tallahassee, Florida 32306). *Physical Review [Section] D: Particles and Fields;* **32**: No. 5, 1198-1204(1 Sep 1985).

The cc-bar states of charmonium are coupled by means of the pair production of light quarks to charmed-meson states. The coupling operator is derived from a reduction of the Feynman amplitude for pair production. The potential and wave functions used are those of the Stanley-Robson model. Energy shifts for the first three J/sup P/ = 1^- states are found to be in the range 50—80 MeV downward. The calculated width of the state psi''(3770) is 14 MeV, which compares favorably with the observed value. Extension of these calculations to lighter and heavier meson systems is briefly considered in the concluding section. Suggestions for improvements and possible areas for further study are also given.

45522 **D/sup / decays: Do theory and experiment agree?.** Thews, R.L.; Kamal, A.N. (Department of Physics, University of Arizona, Tucson, Arizona 85721). *Physical Review [Section] D: Particles and Fields;* **32**: No. 3, 810-812(1 Aug 1985). Contract AC03-76SF00515.

We study the hadronic and radiative decays of D/sup asterisk+/ and D/sup asterisk0/. Using SU(4) symmetry for the hadronic decays, we convert the branching ratios into total rates for D/sup asterisk+/ and D/sup asterisk0/. We point out a potential problem with the ratio Γ(D/sup asterisk+/→$D^+\pi^0$)/Γ(D/sup as-

terisk+/→D $^{0}\pi^{+}$). Finally, using the measured branching ratios for radiative decays, we extract the "experimental" radiative rates. We find these radiative rates puzzling as they are difficult to understand in an SU(4) or broken-SU(4) scheme.

45523 **Gluinonium: The hydrogen atom of supersymmetry.** Goldman, T. (Los Alamos Scientific Lab., NM (USA). Theoretical Div.); Haber, H.E. (California Univ., Santa Cruz (USA). Dept. of Physics). *Physica D: Nonlinear Phenomena (Amsterdam);* **15**: No. 1/2, 181-196(Jan 1985).

The "gluino" (g tilde) the Majorana spin-1/2 supersymmetric partner of the gluon, behaves like a new quark flavor which is a color octet. In analogy with quarkonium, there should exist a spectrum of g tilde g tilde bound states which we will call gluinonia. The large color charge leads to enhanced production rates (in both singlet and octet gluinonia states) in gluon-gluon scattering processes. We compute the rate for observing gluinonium in quarkonium decay and in high energy hadronic collisions. The signal-to-noise ratio is small, but may be observable. The non-observation of a pseudoscalar gluinonium state in radiative psi decay probably rules out gluino masses less than 1 GeV/c^2.

45524 **Bound-state effects in Y -> γ+ resonance.** Pantaleone, J.; Tye, S.H.H. (Cornell Univ., Ithaca, NY (USA). Lab. of Nuclear Studies); Peskin, M.E. (Stanford Linear Accelerator Center, CA (USA)). *Physics Letters,* [*Section*] *B;* **149**: No. 1-3, 225-233(13 Dec 1984).

We study the effect of b-b^{-} bound state dynamics on the amplitude for the reaction T -> γ + resonance. We argue from our results that the recently discovered zeta (8320) must have a scalar, rather than a pseudoscalar, coupling to the b quark.

45525 **Approach of p anti p and pp elastic scattering to 'asymptopia'.** Block, M.M. (Northwestern Univ., Evanston, IL (USA)); Cahn, R.N. (Lawrence Berkeley Lab., CA (USA)). *Physics Letters,* [*Section*] *B;* **149**: No. 1-3, 245-252(13 Dec 1984).

We have previously made a model-free analysis of the t=0 amplitude for p anti p and pp elastic scattering using data in the energy region $5 < \sqrt{s} < 62$ GeV. We use our high-energy values of sigmasub(tot) and rho to fix the energy dependence of the Chou-Yang model of elastic scattering and compute the differential elastic scattering cross sections, dsigmasub(n) / dt, at large -t. In this note, we show that this model, which is dominated at low energies by the matter distribution of the p anti p (pp) system, goes over at SSC energy, 40 TeV, essentially into a structureless black disk. The curvature parameter, $C=(1/2)d^2[\log(d\sigma/dt)]/dt^2$ at t=0, is a sensitive indicator of this transition to 'asymptopia', being positive at ISR energies, going through zero near $\sqrt{s}$=2TeV (the tevatron collider), and becoming very negative at $\sqrt{s}$=40 TeV (the SSC), where the predictions for the Chou-Yang model are hardly distinguishable from those for a sharp disk, after the diffraction have been filled in by the contribution of the real part.

45526 **Heavy flavour contributions to massive lepton pair production.** Berger, E.L. (European Organization for Nuclear Research, Geneva (Switzerland); Argonne National Lab., IL (USA). High Energy Physics Div.); Soper, D.E. (Oregon Univ., Eugene (USA). Inst. of Theoretical Science). *Nuclear Physics* [*Section*] *B;* **247**: No. 1, 29-43(3 Dec 1984).

Massive lepton pair production in hadronic collisions, A + B -> $\mu^{+}\mu^{-}$X, is usually assumed to proceed via an intermediate virtual photon, γsup(*) -> $\mu^{+}\mu^{-}$, the Drell-Yan process. We examine other contributions arising from heavy flavour production, A + B -> Q anti QX; Q -> $\mu\nu$X. We find that this background is comparable to the Drell-Yan signal at small values of M^2sub(μ)sub(anti μ)/s but negligible at large values. Characteristic signatures are described that distinguish the background from the signal.

45527 **Theoretical study of parton fragmentation and evolution into hadrons.** Ng, A.H. Ames, IA; Iowa State Univ. (1984). 192p. University Microfilms Order No. 85-05,855.Contract W-7405-ENG-82.

Thesis (Ph. D.).

Jet production via the QCD Compton effect $\gamma q \rightarrow gq$ are investigated by using Monte Carlo methods to simulate complete three jet events for photo-nucleon interactions. This process provides unique possibilities for jet studies because the incoming photon transfers its entire energy to the final state gluon and quark jets. The authors present a number of predictions for photons in the range of energies presently available up to Tevatron energies and find that the QCD Compton effect will dominate over vector meson dominance at large gluon transverse momenta.

6453 Particle Invariance Principles And Symmetries

REFER ALSO TO CITATION(S) 45014, 45330, 45464, 45472, 45473, 45474, 45475, 45476, 45477, 45551, 45770

45528 **(CNRS-CPT—84-P-1664) Are gauge symmetries symmetries.** Horvathy, P.A.; Rawnsley, J.H. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Oct 1984. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752071.

In topologically non-trivial gauge theories there is in general an obstruction for implementing gauge transformations on the fields, and even those which can be implemented may fail to be symmetries. For instantons no non-trivial gauge transformation can be implemented. For a monopole the residual symmetry group G is implementable if the projection onto the centre of its non-Abelian charge Q is quantized. G is however a symmetry group only if Q belongs actually to the centre. In the non-Abelian Bohm-Aharonov experiment all gauge transformations are implementable but they are symmetries only if the enclosed flux is quantized.

45529 **(CNRS-CPT—84-PE-1661) Survival of grand unified monopoles.** Horvathy, P.A.; Rawnsley, J.H. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Oct 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752070.

If a grand Unified Theory with a compact unifying group G is spontaneously broken to H, magnetic monopoles are created. The fate of such an H-monopole under a subsequent breaking to K is contained in H is shown to depend on the behaviour of its non-Abelian charge Q introduced by Goddard, Nuyts, Olive: if Q belongs to the Lie algebra k of K, the monopole survives: if Q can be H-rotated to k, it can be converted. A necessary condition for an H-monopole to survive is that its Higgs charge satisfy a topological constraint.

45530 **(DESY—85-023) Noethers theorem in quantum field theory.** Buchholz, D.; Doplicher, S.; Longo, R. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Mar 1985. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752092.

Extending an earlier construction of local generators of symmetries in (S. Doplicher, 1982) to space-time and supersymmetries, we establish a weak form of Noethers theorem in quantum field theory. We also comment on the physical significance of the 'split property', underlying our analysis, and discuss some local aspects of superselection rules following from our results.

45531 (INIS-mf—9489, pp 327-339) **Pattern of chiral symmetry breaking in quantum chromodynamics.** Konishi, K. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

Arguments of Coleman and Witten are generalized to show that the possible pattern of chiral symmetry breaking in QCD is SU(Nsub(f)) x SU(Nsub(f)) x Usub(V)(1) - SUsub(V)(Nsub(f)) x Usub(V)(1), under reasonable assumptions. Chiral symmetry breakdown is itself assumed. (author).

45532 (INIS-mf—9489, pp 341-345) **Chiral symmetry and bag model.** Szymacha, A. (Warsaw Univ. (Poland). Inst. Fizyki Teoretycznej); Tatur, S. (Polska Akademia Nauk, Warsaw. Centrum Astronomiczne). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

In SU(2) x SU(2) model basic parameters and radii of bag as well as all electroweak properties of nucleons are calculated. In the calculations the corrections due to the centre of mass motion analyzed earlier by Donoghuse and Johuson were taken into account. The assumptions only one pion emission and pion self-interactions were done. (I.L.).

45533 (INIS-mf—9489, pp 347-362) **Patterns of CP violation.** Peccei, R.D. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The experimental and theoretical constraints on models of CP violation are discussed. The predictions of the hard CP-violating Kobayashi-Maskawa model are contrasted with those of a left-right model, where CP is broken spontaneously. A brief discussion is included of the difference between the CP-violating phases that enter in kaon decay and those that may be responsible for the baryon asymmetry in the Universe. (author).

45534 (INIS-mf—9489, pp 403-406) **Higgs fields in M.A.C.** Czechowski, A. (Warsaw Univ. (Poland). Inst. Fizyki Teoretycznej). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

Assuming the symmetry SU(N) of gauge field the symmetry breaking pattern is given and it is shown that it is possible fo find the eigenvalue-type asymptotically free solutions with fundamental scalars in the most attractive channel. (L.I.).

45535 **(INIS-mf—9489) Proceedings of the 4. Warsaw symposium on elementary particle physics. Kazimierz, Poland, 24-31 May 1981.** Ajduk, Z.; Doroba, K. (eds.). (Warsaw Univ. (Poland). Inst. Fizyki Teoretycznej; Institute of Nuclear Research, Warsaw (Poland)). 1981. 525p. (CONF-8105114—). NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516.

45536 **(INP—1131/PL) Problem of the additional quantum number ω in the decomposition U(3) x U(3) → U(3).** Knyr, V.A.; Smirnov, Yu. F.; Tolstoy, V.N. (Institute of Nuclear Physics, Krakow (Poland)). 1981. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701936.

The matrix of the operator OMEGA = Σsub(i,k,l) Asub(ik)(v)Asub(kl)(v) Asub(li)(w) (Asub(ik) are the generators of the U(3) group) exhibits a nondegenerate spectrum of the eigenvalues ω which may be used as the additional quantum number for the complete and unambiguous classification of the basic vectors in the space of the direct product of the irreducible representations D[v] x D[w] of the U(3) group.

45537 **(IPNO-TH—83-34) Pauli-Guersey symmetry in gauge theories.** Stern, J. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). May 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751162.

Gauge theories with massless or massive fermions in a self-contragredient representation exhibit global symmetries of Pauli-Guersey type. Some of them are broken spontaneously leading to a difermion Goldstone bosons. An example of a boson version of the Pauli-Guersey symmetry is provided by the Weinberg-Salam model in the limit THETAsub(w)→O.

45538 **(IPNO-TH—84-15) Contribution to the study of spontaneous breakdown of the chiral symmetry in gauge theories.** Gamonal, R. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire; Paris-6 Univ., 75 (France)). 1984. 143p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE85751171.

In the framework of quantum chromodynamics, we have been interested in the order parameters for the breakdown of the non-abelian chiral symmetry. Using the functional integral representation in the euclidean formalism, we have performed the fermionic integration after having inverted the chiral limit and the integration over gluonic fields. So, we were led to look for what gauge field configurations, the fermionic integrand has a non-vanishing chiral limit. We have been able to show, in a general manner, that the generating functional of all the order parameters vanishes in the chiral limit for the gauge field configurations which lead to a discrete spectrum for the Dirac operator around zero. For those leading to a continuous spectrum from the zero eigenvalue, the existence of a non-vanishing infra-red limit for the spectral density of the Dirac operator is crucial. We have exhibited gauge field configurations which give such a behaviour. Nevertheless, our analysis reveals the necessity to get a degeneracy for the zero modes belonging to the continuum of the Dirac operator. We have been able to demonstrate, for the class of gluonic fields, previously considered, an absence of degeneracy.

45539 **Fermion mass hierarchy as a consequence of the spontaneous breakdown of the four-flavor symmetry.** Cveti, M. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review [Section] D: Particles and Fields;* **32**: No. 5, 1214-1221(1 Sep 1985). Contract AC03-76SF00515.

We study the fermion mass matrix in the case of four fermionic flavors u, d, c, and s. The original Lagrangian of the effective gauge theory respects the full four-flavor symmetry and fermions are massless. We analyze a vacuum expectation pattern of the elementary Higgs-field multiplet Phi/sub a/b [(a,b) = u,d,c,s]. Nonzero vacuum expectation values of Phi spontaneously break the original flavor symmetry with fermionic masses being directly proportional to these vacuum expectation values. In the Higgs potential, hard terms in Phi respect the global symmetry SU(4)/sub L/ x SU(4)/sub R/ of four flavors while soft terms in Psi break this symmetry down to the effective anomaly-free gauge group SU(2)/sub L//sup e/+μ x SU(2)/sub R//sup e/+μ. These soft terms are due to radiative as well as nonperturbative effects. Such a symmetry structure of the Higgs potential can be motivated by the underlying preonic dynamics. The desired solution, i.e., the proper interfamily and intrafamily hierarchy as well as the desired Cabibbo mixing angle, can emerge as a consequence of a subtle interplay between the soft terms and certain hard terms of the Higgs potential.

45540 **Supersymmetric statistical models on the lattice.** Shapir, Y. (Brookhaven National Lab., Upton, NY (USA). Physics Dept.; Illinois Univ., Urbana (USA). Materials Research Lab.). *Physica D: Nonlinear Phenomena (Amsterdam);* **15**: No. 1/2, 129-137(Jan 1985).

SUSY models in statistical mechanics involve spinless fermions and form an ideal laboratory for latticization. Extension of SUSY relations to the lattice may clarify, as well, the question of their validity beyond perturbation theory. A non-linaer approach to lattice SUSY is introduced by the assignment of coupled commuting and anticommuting variables to each lattice site. As a typical example we demonstrate a SUSY dimer Hamiltonian which generates lattice branched-polymer configurations. We suggest a new SUSY model whose configurations are generated by the Ising super-Hamiltonian. These configurations cannot be simply related to the high temperature expansion of the random-field Ising model. The critical behavior of the random-field model is probably in the non-perturbative regime with thermal fluctuations squeezed into anti d-dimensional manifolds in the boundaries of frozen domains. SElf-consistent dimensional reductions yields anti d = (d + 1/ν)/2 if α < 0 and anti d = d - 1/ν if α > 0, where d is the actual

spatial dimension and α and ν are the critical exponents for the specific heat and correlation length, respectively. This may be explained in terms of anomalous "anticommuting dimensions".

45541 Review of supersymmetric quantum mechanics. Freedman, B. (Illinois Univ., Urbana (USA). Dept. of Physics); Cooper, F. (Los Alamos National Lab., NM (USA). Theoretical Div.). *Physica D: Nonlinear Phenomena (Amsterdam);* **15**: No. 1/2, 138-146(Jan 1985).

In this survey we review both the Hamiltonian and the path-integral approaches to supersymmetric quantum mechanics. We then discuss the related path integrals for the Witten index and for stochastic processes and show how they are indications for supersymmetry breakdown. We then discuss a system where the superpotential W(x) has asymmetrical values at x=+-infinite. In this case, we find that pairing is broken as there is a mismatch between the fermionic and bosonic continuum density of states. Also, the Witten index is dependent on the regulation parameter β. We finally discuss nonperturbative strategies for studying supersymmetry breakdown based on introducing a lattice and studying the behavior of the ground state energy as the lattice cutoff is removed.

45542 Supersymmetry breaking at finite temperature and the existence of the Goldstone fermion. Boyanovsky, D. (Stanford Linear Accelerator Center, CA (USA)). *Physica D: Nonlinear Phenomena (Amsterdam);* **15**: No. 1/2, 152-162(Jan 1985).

In this article we attempt to understand the nature of SUSY breaking at finite temperature and to determine whether or not there is a Goldstone fermion associated with this phenomenon. We use a manifestly Lorentz covariant formalism to study the theories under consideration; this is necessary to expose fully the dynamical properties of physical observables. It is shown that in this way Goldstone excitation is found as a consequence of the breaking at finite temperature, and it becomes clear how this excitation decouples at zero temperature. The rest of the article is devoted to the technical details of the investigation and is divided as follows: in section 2 the standard Ward identities at zero temperature are briefly reviewed. In section 3 the finite temperature formalism are reviewed, exposing the differences between the covariant (real time) and non-covariant (imaginary-time) formulations. The results of section 2 will be extended to finite temperature in the covariant approach. Section 4 is devoted to the computation of the fermion thermal Green's exposing the mechanism that gives rise to the Goldstone pole and the way it decouples at zero temperature. The conclusions are summarized at the end of the article.

45543 Superlattice supersymmetry. Kostelecky, V.A. (Los Alamos Scientific Lab., NM (USA). Theoretical Div.); Rabin, J.M. (Chicago Univ., IL (USA). Enrico Fermi Inst.). *Physica D: Nonlinear Phenomena (Amsterdam);* **15**: No. 1/2, 213-218(Jan 1985).

We construct a cubic lattice of discrete points in superspace, as well as a discrete subgroup of the supersymmetry group which maps this "superlattice" into itself. We discuss the connection between this structure and previous versions of lattice supersymmetry. Our approach clarifies the mathematical problems involved in formulating supersymmetric lattice field theories and suggests new methods for attacking them.

45544 Nonlinear realizations and the partial breaking of extended supersymmetry. Bagger, J.A. (Stanford Linear Accelerator Center, CA (USA)). *Physica D: Nonlinear Phenomena (Amsterdam);* **15**: No. 1/2, 198-207(Jan 1985).

In this paper we use nonlinear realizations to examine the breaking of N=2 extended supersymmetry to N=1. We derive Lagrangians and transformations laws for the generalized N=2 Akulov-Volkov Goldstone field. We analyze the ghost states and show that they may be collected into N=1 supermultiplets. We extend the transformation laws for the N=1 chiral and vector multiplets to N=2. Finally, we give the N=2 generalization of an arbitrary N=1 supersymmetric Lagrangian.

45545 Stability of supersymmetric ground state in chiral theories. Taylor, T.R. (Fermi National Accelerator Lab., Batavia, IL (USA)). *Physics Letters, [Section] B;* **149**: No. 6, 470-472(27 Dec 1984).

The effective action for the scalar propagator is studied in supersymmetric chiral gauge theories. The form of the scalar potential ensures the stability of the supersymmetric ground state, even for large values of the coupling constant. It is found however, that the gluino condensation tends to destabilize the system. This may signal dynamical supersymmetry breaking.

45546 (BNL—36727) Reversible Ising dynamics. Creutz, M. (Brookhaven National Lab., Upton, NY (USA)). 1985. Contract AC02-76CH00016. 8p. (CONF-8504167—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85016059.

From Conference on advances in lattice gauge theory; Coral Gables, FL, USA (10 Apr 1985).

The author discusses a reversible deterministic dynamics for Ising spins. The algorithm is a variation of microcanonical Monte Carlo techniques and is easily implemented with simple bit manipulation. This provides fast programs to study non-equilibrium phenomena such as heat flow.

45547 (CNRS-CPT—84-P-1622) Remark on the cluster theorem. Fredenhagen, K. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Jun 1984. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751169.

An improved version of the cluster theorem of relativistic quantum field theory with the correct exponential decay is derived by function theoretical methods.

45548 (DESY—85-026) Iterative hopping expansion algorithm for Monte Carlo calculations with very light fermions. Montvay, I. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Mar 1985. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752128.

The number of numerical operations necessary for a Monte Carlo simulation with very light fermions (like u- and d-quarks in quantum chromodynamics) is estimated within the iterative hopping expansion method.

45549 (DESY—85-027) Kadanoff-Wilson transformations in quantum gauge theories. Kerler, W. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Mar 1985. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752129.

A transparent condition restricting KW transformations of correlation functions is used to establish the behavior of QFT functions. The arising proportionality factors are calculated for large classes of transformations and correlations. Gauge-invariant block transformations for matter fields are introduced, too. KW invariant functions are constructed which are suited for the QFT limit and allow firm conclusions about the parameters of the theory.

45550 (DESY—85-031) Classical instanton on a 4-dimensional periodic lattice. Fox, I.A.; Laursen, M.L.; Schierholz, G.; Gilchrist, J.P.; Goeckeler, M. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Apr 1985. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752133.

On a 4-dimensional periodic lattice, we construct an SU(2) gauge field configuration which is analogous to the classical instanton. This is shown to have topological charge equal to one. We calculate the eigenvalue spectrum of the fermion matrix and demonstrate the existence of an approximate zero-mode.

45551 (DOE/ER/45144—T1) [Topics in theoretical physics]. Progress report. (Chicago Univ., IL (USA)). 1985. Contract FG02-84ER45144. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016734.

Progress is reported in these areas: supersymmetry and conformal invariance and new structures in two dimensional critical phenomena; spinor fields and new applications and techniques for studying Ising model correlation factors; superstring compactification and high energy physics applications for novel two dimensional critical points; ordered and disordered spatial structure in dynamical systems; and fermion-boson mass relations in BCS type theories. Research is proposed in covariant formulation of the superstring, topics in superconformal field theory and new structures in two dimensional critical phenomena, ordered and disordered spatial structure in dynamical systems, and field theory over Galois fields. 48 refs. (LEW)

45552 **(FRNC-TH—1569) Renormalisation and completely integrable theory.** Maillet, J.M. (Paris-11 Univ., 91 - Orsay (France)). Mar 1982. 112p. (In French). NTIS (US Sales Only), PC A06/MF A01. File Number DE85751150.

In this work the following questions are treated: S matrix factorizable and statistical models; classical method of inverse problem; quantum complex model of Sine-Gordon.

45553 (INIS-mf—9306, pp I47) **Unitarity and time reversal in the Glauber model.** Lazard, C.; Lombard, R.J. (Paris-11 Univ., 91 - Orsay (France). Div. de Physique Theorique); Maric, Z. Includes Dutch summary; 58 refs.; 7 figs.; 2 tabs.

This thesis provides a general method to compute all first order corrections to the renormalization group equations. This requires the computation of the first perturbative corrections to the renormalization group β-functions. These corrections are described by Feynman diagrams with two loops. The two-loop renormalization is treated for an arbitrary renormalization field theory. Two cases are considered: 1. the Yukawa sector; 2. the gauge coupling and the scalar potential. In a final section, the breakdown of unitarity in the dimensional reduction scheme is discussed.

45561 **(IPNO-TH—83-54) Order αsub(s) corrections to nucleon axial form factors in the bag model.** Loiseau, B.; Maxwell, O.V.; Cottingham, W.N. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Oct 1983. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751160.

In this paper, we demonstrate a consistent procedure for renormalization in Q.C.D. perturbation theory inside the bag and calculate up to order αsub(s) the nucleon axial form factors for small values of q^2. Our gluonic corrections for the axial vector form factor are small but improve the agreement of the zeroth order result with experiment. Our calculated induced pseudoscalar form factor is much smaller than experiment which appears to be dominated by the pion pole, we take this as evidence that the pion field around a nucleon can not be generated in low order Q.C.D. perturbation theory.

45562 **(JINR—E-2-84-260) Intrinsic geometry of N=2 supersymmetry and supergravity.** Galperin, A.; Ivanov, E.; Kalitzin, S.; Ogievetsky, V.; Sokatchev, E. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 6p. (CONF-840757—34). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701919.

From 22. international conference on high energy physics; Leipzig, German D.R. (19 Jul 1984).

A new approach to N=2 supersymmetry based on the concept of harmonic superspace is proposed and used to give an unconstrained superfield geometric description of N=2 super Yang-Mills and supergravity theories as well as of matter N=2 hypermultiplets. The harmonic N=2 superspace has as independent coordinates, in addition to the usual ones, the isospinor harmonics U_i^{+-} on the sphere SU(2)/U(1). The role of usub(i)sup(+-) is to relate the SU(2) group realized on the component fields to a U(1) group acting on the relevant superfields. Their introduction makes it possible to SU(2)-covariantize the notion of Grassmann analyticity. Crucial for this construction is the existence of an analytic subspace of the general harmonic N=2 superspace. The hypermultiplet superfields and the true prepotentials (pre-prepotentials) of N=2 super Yang-Mills and supergravity are unconstrained superfunctions over this analytic subspace. The pre-prepotentials have a clear geometric interpretation as gauge connections with respect to the internal SU(2)/U(1) - directions. A radically new feature arises: the number of gauge and auxiliary degrees of freedom becomes infinite while the number of physical degrees of freedom remains finite. Other new results are the massive N=2 Yang-Mills theory and various off-shell self-interactions of hypermultiplets. The propagator for Yang-Mills superfield is given.

45563 **(NIKHEF-H—84-12) Analytical evaluation of the partition function for unit hypercubes in four dimensions.** Hari Dass, N.D. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Oct 1984. 34p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701920.

The group integrations required for the analytic evaluation of the partition function for unit hypercubes in four dimensions are carried out. Modifications of the graphical rules for SU_3 group integrations cited in the literature are developed for this purpose. A complete classification of all surfaces that can be embedded in the unit hypercube is given and their individual contribution to the partition function worked out. Applications are discussed briefly.

45564 **(NIKHEF-H—84-13) Variational estimates for the mass gap of SU(2) Euclidean lattice gauge theory.** Hari Dass, N.D. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Oct 1984. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701918.

The purpose of this letter is to report on the progress made in our understanding of series expansions for the masses in lattice gauge theories by the application of variational techniques to the Euclidean SU(2) lattice gauge theory.

45565 **(UFPB-DF—02/84) Supersymmetry-supergravity.** Oliveira Rivelles, V. de. (Paraiba Univ., Joao Pessoa (Brazil). Dept. de Fisica). 1984. 19p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701921.

A short introduction to supersymmetry and supergravity is made. The utilization of finite field theories and some new advances in particle phenomenology and cosmology are presented.

45566 **Quark mass matrices in a SUSY composite model.** Zhou, B.R. (China Univ. of Science and Technology, Hofei. Dept. of Modern Physics; Stanford Linear Accelerator Center, CA (USA)); Lucio, J.L. (Instituto Politecnico Nacional, Mexico City. Dept. de Fisica; Instituto Politecnico Nacional, Mexico City. Centro de Investigacion y de Estudios Avanzados). *Physics Letters, [Section] B;* **149**: No. 1-3, 152-156(13 Dec 1984).

It is shown that the Z_{10} symmetry which survives the breaking of a combination of the axial Usub(A)(1) and the R symmetry in a SUSY composite model, can lead to the relation tg THETAsub(c) approx.= (msub(d) / msub(s))sup(1/2).

45567 **Conservation of electric charge around a monopole of finite size.** Kazama, Y. (Kyoto Univ. (Japan). Dept. of Physics); Sen, A. (Fermi National Accelerator Lab., Batavia, IL (USA)). *Nuclear Physics [Section] B;* **247**: No. 1, 190-224(3 Dec 1984).

In monopole-fermion dynamics, the boundary condition which is responsible for baryon number non-conservation also violates electric and color hypercharge conservation. We show by detailed calculations that actually the latter conservation laws are dynamically restored. It is shown that for a finite size monopole, there is a small but finite amplitude for the monopole ground state to make a virtual transition into a state containing a dyon and some fermions carrying equal and opposite charge as that of the dyon. But the amplitude for this state to make a virtual transition to a state carrying a net total charge is identically zero. The monopole ground state, as a result, is an eigenstate of electric charge even in the presence of massless fermions. We also calculate the four-body charge and chirality conserving but baryon number violating condensates, which exist independently of the existence of the anomaly and hence persist even in the presence of more generations of massless fermions.

6455 Scattering Theory

45568 **(UWThPh—84-45) Quasi-classical limit of scattering amplitude - L^2-approach for short range potentials.** Yajima, K. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1984. 64p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701914.

We are concerned with the asymptotic behaviour as Planck's constant $h \to 0$ of the scattering operator Ssup(h) associated with the pair of Schroedinger equations i h/2π delta u/delta t = - ((h/2π)^2/2m)Δu + V(x) u equivalent to Hsup(h)u and i h/2π delta u/delta t = - ((h/2π)^2/2m)Δu equivalent to Hsup(h)$_0$u. We shall show under certain conditions that the scattering matrix S-circumflexsup(h)(p,q), the distribution kernel of Ssup(h) in momentum representation, may be expressed in terms of a Fourier integral operator. Then applying the stationary phase method to it, we shall prove that S-circumflexsup(h) has an asymptotic expansion in powers of h/2π up to any order in L^2-space and that the limit as $h \to 0$ of the total cross section is twice the one of classical mechanics, in generic.

45589 **(AD-A—154995/5/XAB) Kalman-Filter time-series analysis of gamma-ray data from NaI(Tl) detectors for the ND6620 computer. Final report.** Phillips, G.W. (Naval Research Lab., Washington, DC (USA)). 8 May 1985. 117p. (NRL-MR—5541). NTIS, PC A06/MF A01.

The Kalman-Filter technique is applied to time-series gamma-ray data from NaI(T1) detectors. A set of standard spectra that contribute significantly to the data in the least-squares sense are first determined using regression analysis. The Kalman-Filter computer program is then used to determine the time behavior for the intensities of the standards that contribute to the observed spectra. The program was written for the ND6620 computer in DEC RT-11 FORTRAN and is being transferred to the VAX 11/780.

6510 Nuclear Physics

45570 (IAEA-SMR—93, pp 173-206) **Evaluation of nuclear data and their uncertainties.** Story, J.S. (UKAEA Atomic Energy Establishment, Winfrith). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

Some topics studied within the Winfrith Nuclear Data Group in recent years, and still of current importance, are briefly reviewed. Moderator cross-sections; criteria to be met for reactor applications are listed; thermal neutron scattering theory is summarized, with the approximations used to facilitate comutation; neutron age data test stringently the accuracy of epithermal cross-sections; a modification of the CFS effective range treatment for S-wave scatter by H is presented, and new calculations with up-to-

date slow neutron scattering data are advocated. Use of multilevel resonance formalisms; the top bound resonance should be included explicitly in calculations; additive statistical terms are given to allow for "distant" negative and positive resonances, in both MLBW and R-M formalisms; formulae are presented for estimating R-M level shifts for $1 > 0$ resonances. Resonance mean spacings; the Syson-Mehta optimum estimator is utilised in a method which up-dates the staircase plot. Resonances of ^{56}Fe have been resolved to approx. 800keV, over which range the level density for given $J\pi$ should increase 2-fold; this variation is allowed for in the mean spacing calculations. Fission-product decay power; present status of integral data and summation calculations for ^{235}U and ^{239}Pu fissions is summarized, with a variety of intercomparisons including ^{239}Pu/^{235}U ratios. Data uncertainties are considered, but the sequence of data on GAMMAsub(γ) for the 27.8keV resonance of ^{56}Fe provided a cautionary example.

45571 (IAEA-SMR—93, pp 263-277) **Introduction to the content of the major available evaluated nuclear data libraries.** Salvatores, M. (CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

The following notes were intended as complement to the main topic of the lectures presented at the Winter College of Nuclear Physics and Reactors. Actually, the topic was covered according to the outline given in Appendix and the presentation was based as far as possible on the practical features of the basic data files, in particular the ENDF/B files. The present notes are subdivided in two parts: part I is a general introduction to the problem of the evaluated data files and gives the main references on the topic. Part II presents a few specific examples of the use of the evaluated data files in the wide application fields of neutron heating a photon production.

45572 (INDC(NDS)—155/G-P-No.10) **Progress in fission product nuclear data. Information about activities in the field of measurements and compilations/evaluations of fission product nuclear data (FPND).** Lammer, M. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee). Sep 1984. 75p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701685.

This is the tenth issue of a report series on Fission Product Data which informs us about all the activities in this field which are planned, ongoing, or have recently been completed. The types of activities included are measurements, compilations and evaluations of: fission product yields (neutron induced and spontaneous fission), neutron reaction cross sections of fission products, data related to the radioactive decay of fission products, delayed neutron data of fission products, lumped fission product data (decay heat, absorption, etc.). There is also a section with recent references relative to fission product nuclear data.

45573 (INIS-mf—9306) **PANIC - particles and nuclei - tenth international conference. Book of abstracts. Vol. 2.** Guettner, F.; Povh, B.; Putlitz, G. zu (eds.). (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.; Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)). 1984. 451p. (CONF-840789—Vol.2-Absts.). NTIS (US Sales Only), PC A20/MF A01. File Number DE85781517.

From International conference on particles and nuclei; Heidelberg, F.R. Germany (30 Jul 1984).

The second volume of the PANIC proceedings contains the abstracts contributed to the named conference concerning LEAR physics, symmetries and conservation laws, baryon reactions, relativistic heavy ion reactions, rare decays, exotic atoms, hypernuclei, and kaon reactions. See hints under the relevant topics. (HSI).

45574 (INIS-mf—9319) **Annual report 1984 of the 2. Institut fuer Experimentalphysik Universitaet Hamburg.** (Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Experimentalphysik). Dec 1984. 102p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE85781550.

This annual report contains short descriptions of the work performed at the named institute together with a list of publications and theses. The work concern hyperfine structure and Moessbauer studies, synchrotron radiation experiments, contributions of this institute to the CHARM collaboration at CERN, e^+e^- interaction studies at PETRA, and detector developments.

45575 (IPNO-RA—1983) **1983. Annual progress report. [Nuclear physics research program].** (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1984. 203p. (In French). NTIS (US Sales Only), PC A10/MF A01. File Number DE85751177.

A beautiful experiment series for studying high energy excitation structures (10 to 80 MeV), concerning very heavy and asymmetric systems. CEV-Alice contributions to annual report concern Hg and Er high spin energy levels. About reaction mechanisms, the following contributions can be noticed: proton backward emission experiment results of high energy, at 200 MeV, on numerous targets; spectroscopic studies of direct transfer reactions by ^{18}O with measurement of angular distributions until 0°; many heavy ion experiments around 30 MeV/u concerning the mechanism evolution between 10 and 100 MeV. Pion coherent production experiments have been made this year on energy dependence of the reaction $^3He + ^3He \rightarrow {}^6Li + \pi^+$, considered as an existing model test. Cross section measurement of the elementary reactions (p,π^+) on three targets of very different masses, in a large energy scale and a wide angular domain, have been measured at the Synchrocyclotron. Concerning the nuclear structure in low and medium energy levels, elastic scattering and transfer studies are to be noticed particularly in transition nuclei region. Exotic nuclei rich in neutrons, with medium mass, Fe, Co, Ni, Zn have been studied using the ^{14}C beam of the Orsay tandem. The radiochemistry group work is essentially centered on actinides study.

45576 (JAERI-M—84-010, pp 82-96) **Review of the theory of sensitivity and uncertainty analysis.** Iijima, S. (Nippon Atomic Industry Group Co. Ltd., Kawasaki, Kanagawa. Nuclear Research Lab.). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

Theory of sensitivity and uncertainty analysis is being extensively applied to the problems in various fields, such as nuclear data evaluation, reactor physics and shielding calculations, reactor burnup problems, and thermal-hydraulics problems. It is clear that we should be familiar with this theory if we are to incorporate evaluated covariance data into JENDL Version 3. In the practical application of the theory we must deal with a large amount of input and output data and must develop detailed algorithm of calculation. Moreover, certain important problems must be cleared such as how to handle the systematic errors in data, and the uncertainties in calculational method. The present review is aimed to give essential frameworks of the theory of sensitivity and uncertainty analysis with emphasis on the application of the theory to nuclear data evaluation.

45577 (JAERI-M—84-010, pp 177-194) **Reviews of the simultaneous evaluation and evaluated covariance matrices for the cross sections on heavy nuclides.** Uenohara, Yuji; Kanda, Yukinori (Kyushu Univ., Fukuoka (Japan)). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

The simultaneous evaluation method for the cross sections on heavy nuclides are introduced on the basis of the authors' work whose features are on using of spline functions, logarithms of cross sections and Bayes estimation. The evaluated cross sections and covariance matrices for them are discussed and compared with others.

45578 (JAERI-M—84-010, pp 195-215) **Evaluation of gamma-ray production cross sections.** Mizumoto, Motoharu (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

A working group on nuclear data for photon production was organized in 1979 for the purpose of evaluating gamma-ray production cross sections for the JENDL-3 (Japanese Evaluated Nuclear Data Library-Version 3). The experimental data for evaluation and computer programs used for calculation have been accumulated and investigated. Recently, the preliminary evaluations for specific nuclei have been completed and the procedure to store the data in the ENDF/B format has been developed. This report describes the past and present activities of the working group and discusses the problems to be solved.

6511 Experimental Techniques

45579 (BONN-HE—85-1) **Photonuclear physics with low intensity photon beams.** Mecking, B.A. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Jan 1985. 25p. (CONF-8410227—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751891.

From Workshop on electron and photon interactions at medium energies; Bad Honnef, F.R. Germany (29 Oct 1984).

Experiments in photonuclear physics are discussed that require a low intensity photon beam and large acceptance detectors. This combination is especially suitable for the investigation of photoprocesses on nucleons and light nuclei. A specific experimental setup for the electron stretcher ring ELSA is presented.

45580 (IAEA-SMR—93, pp 3) **Continuum spectra in proton- and neutron-induced reactions.** Tamura, T. (Texas Univ., Austin (USA). Dept. of Physics). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

Published in summary form only.

45581 (JAERI-M—84-010, pp 2-14) **Introduction to nuclear cross section measurement for evaluators fission cross section.** Murata, Toru (Nippon Atomic Industry Group Co. Ltd., Tokyo). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

Explanatory description of nuclear cross section measurements was made for the nuclear data evaluators who were not familiar with the experiments. Principle of the measurement, neutron sources and radiation detection techniques were explained generally at first, then examples of the measurement system, data analysis, present status of the measurement uncertainty and future problems were presented for the fission cross section measurement.

45582 (LA-UR—85-2161) **Proton polarimeters for spin transfer experiments.** McNaughton, M.W. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 19p. (CONF-8506152—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014098.

From CEBAF summer workshop; Newport News, VA, USA (3 Jun 1985).

The design and use of proton polarimeters for spin transfer (Wolfenstein parameter) measurements is discussed. Polarimeters are compared with polarized targets for spin dependent experiments. 32 refs., 4 figs.

45583 (LA-UR—85-2422) **Neutron chopper development at LANSCE.** Nutter, M.; Lewis, L.; Tepper, S.; Silver, R.N.; Heffner, R.H. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 13p. (CONF-850762—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015721.

From 8. meeting of international collaboration on advanced neutron sources; Oxford, UK (7 Jul 1985).

Progress is reported on neutron chopper systems for the Los Alamos Neutron Scattering Center pulsed spallation neutron source. This includes the development of 600+ Hz active magnetic bearing neutron chopper and a high speed control system designed to operate with the Proton Storage Ring to phase the chopper to the neutron source. 5 refs., 3 figs.

6512 Nuclear Properties And Reactions, A=1-5, Theoretical

45584 (BONN-HE—85-06) **Tensor polarized deuteron targets for intermediate energy physics experiments.** Meyer, W.; Schilling, E. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Mar 1985. 10p. (CONF-8409134—4). NTIS (US Sales Only), PC A02/MF A01. File Number DE85752085.

From 4. workshop on polarized target materials and techniques; Bonn, F.R. Germany (2 Sep 1984).

At intermediate energies measurements from a tensor polarized deuteron target are being prepared for the following reactions: the photodisintegration of the deuteron, the elastic pion-deuteron scattering and the elastic electron-deuteron scattering. The experimental situation of the polarization experiments for these reactions is briefly discussed in section 2. In section 3 the definitions of the deuteron polarization and the possibilities to determine the vector and tensor polarization are given. Present tensor polarization values and further improvements in this field are reported in section 4.

45585 (DOE/ER/02972—6) **Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980.** (Texas Univ., Austin (USA). Dept. of Physics). Jan 1981. Contract AC05-76ER02972. 45p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85016833.

Progress is reported in these experiments: measurement of polarization transfer coefficients K/sub NN/, K/sub LL/ in pd nX and p vector ^{9}Be → n vector X at 800 MeV, measurement of spin transfer parameters K/sub NN/, K/sub SS/ and K/sub LL/ in n vector p → p vector n at 800 MeV in the charge exchange region, measurement of the parameter D/sub NN/(90°) (=K/sub NN/(90°)) from 400 to 800 MeV in pp elastic scattering, a measurement of the deuteron spectrum in pp d($\pi\pi$)/sup O/ at 750 MeV, and pC analyzing power measurements between 550 and 800 MeV. Current approved LAMPF proposals are listed. 14 refs., 18 figs. (LEW)

From International conference on particles and nuclei; Heidelberg, F.R. Germany (30 Jul 1984).

Published in summary form only.

45587 (ITF—84-63-R) **Excitation of breathing resonances under the S-shell nuclei scattering by α-particle.** Filippov, G.F.; Vasilevskij, V.S.; Nesterov, A.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1984. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701812.

An algorithm which allows one to take into account both collective and cluster degrees of freedom of the nucleon system is proposed for the investigation of light nuclei resonance states. The algorithm is used to study the monopole resonances of the ^{6}Li nucleus. It is shown that when deuterons collide with α-particles the

resonance states get excited at energies above 20 MeV and widths not exceeding 1.5 MeV. The collective and cluster modes coupling affecting the resonance widths is discussed.

45588 **(ITF—84-67-R) Three-body approach to the d(N, 2N)N reaction.** Kvaratskheliya, T.I.; Meboniya, D.B. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1984. 34p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701821.

Three-body nonrelativistic approach to the quasi-elastic knock-out (QEK) reactions is developed on the basis of Faddeev equations and the assumption on validity of a single collision mechanism where the three-body unitarity for the reaction amplitude is required to be satisfied. Quantitative calculations performed for the d(P, 2P)n and d(P, Pn)P reactions together with investigations of the authors performed earlier for other (different) QEK (exhibit) the high stability of the proposed method relative to different QEK in the whole range of nonrelativistic scattering.

45589 **(ITP—84-86-E) Relativistic rotation of spin and asymptotic behaviour of the form factor of the composite system.** Trubnikov, S.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1984. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701814.

The relativistic rotation of nucleon spin in addition to deuteron spin leads to the appearance of the new term in the deuteron charge form factor (DCFF). This term is absent in the traditional approaches and essentially influences the asymptotic behaviour of DCFF. General formulae are obtained for the DCFF asymptotics in the relativistic and nonrelativistic impulse approximation.

45590 **(JINR—1-84-519) Pion absorption in the ^{4}Hep - dppn reaction.** Glagolev, V.V.; Lebedev, R.M.; Pestova, G.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701843.

The ^{4}Hep→dppn reaction at the 8.6 GeV/c momentum of ^{4}He is analysed. The difference between diagrams of dependences of effective mass of the deuteron and two slow nucleons from transfer momenta in ^{4}Hep→dppn and ^{4}Hep→^{3}Heppπ^- reactions witnesses in favour of pion absorption. It is shown that approx. 20% of the events of the ^{4}Hep→dppn reaction goes via this mechanism.

45591 **(JINR—E-1-83-690) Determination of optimal conditions for the experimental investigation of muon catalysis of nuclear reaction t+t → ^{4}He+2n.** Bystritsky, V.M.; Dzhelepov, V.P.; Gula, A.; Stolupin, V.A.; Voznyak, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701841.

Submitted to the journal Acta Phys. Pol. .

Formulae describing the kinetics of muon-catalysed fusion t+t → ^{4}He+2n in pure tritium are analyzed with the aim of establishing optimum conditions for the experimental investigation of ttsub(μ)-fusion. It is shown that to determine the parameters an experiment with a pure tritium target data have to be take at different target densities. The range of variation of target density, required to cover the region of parameter values predicted theoretically, is determined. In particular, it is shown that temperature variation of the density of liquid tritium in a rather small range above the temperature of liquid hydrogen (20.4 k) is sufficient in this kind of experiment.

Submitted to the journal Sov. J. At. Energy.

The process of successive multiple muon catalysis of the t+t → ^{4}He+2n reaction is studied. In order to determine the measurements is suggested. The expressions for yield of the first, second, etc., detected acts of successive muon catalysis of experimental data and to improve the accuracy and confidence in determining the muon catalysis of d+d reaction of the mean multiplicity of this reaction m >= 1.

45593 **(JINR—E-1-84-26) Cycle-by-cycle analysis of muon catalysed fusion in a one-component medium.** Bystritsky, V.M.; Gula, A.; Voznyak, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701824.

Submitted to the journal Atomkernenerg. Kerntech. .

The formulae describing the separate cycles of muon catalysed nuclear synthesis of hydrogen isotopes in a one-component medium (pure deuterium or tritium) are derived and discussed. The obtained formulae are applied to cycles actually detected in the experiment (detection efficiency epsilon < 1). Formulae enable one to obtain the values of rates of μ-molecule formation and fusion rate in the μ-molecule from direct fits of the data in a finite time-interval for any number of detected cycles.

45594 **(JINR—R-1-83-853) Determination of parameters of the muon catalysis process from thee analysis of experimental time distribution of successively detected events of fusion reactions.** Zinov, V.G.; Somov, L.N.; Fil'chenkov, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701830.

Submitted to the journal Nucl. Instrum. Methods.

The expressions for the distributions of the successively detected events t+t and d+t have been obtained. Possibilities to determine the mu-catalysis process parameters without using the detection efficiency of the reactions are discussed.

45595 **(JINR—R-4-84-18) Calculation of total cross sections of the hadron- nucleus interaction at low energies.** Belyaev, V.B.; Mansurov, M.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701831.

Submitted to the journal Sov. J. Nucl. Phys. .

Total cross section is calculated of the pion-deuteron interaction in the framework of the moments methods without using the final-state wave functions. The energy dependence of the cross section is found. The convergence of the method is studied.

45596 **(JINR—R-4-84-45) Successively detected events of the multiple muon catalysis process.** Zinov, V.G.; Somov, L.N.; Fil'chenkov, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1984. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701834.

Submitted to the journal Sov. J. At. Energy.

The kinetics of multiple muon catalysis process is considered. Expressions for the yields and time distributions of successive events of mu-catalysis reactions detected with epsilon < 1 efficiency have been obtained. The general methods of delivering these expressions are considered and concrete results for the t+t reaction in tritium and d+t reaction in d_2+t_2 mixtere are given. These results can be also applied to the synthesis reactions p+d -> ^{3}He+γ in h_2 d_2 mixture and p+t -> ^{4}He+γ in h_2+t_2 mixture. It is shown that the mu-catalysis process parameters and the detection efficiency can be independently determined for the experimental data analysis.

45597 (GANIL-P—84-01) Role of collision terms for nucleon emission in intermediate energy heavy ion reactions. Gregoire, C.; Scheuter, F.; Remaud, B.; Sebille, F. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)). Jan 1984. 32p. (CONF-840156—8). NTIS (US Sales Only), PC A03/MF A01. File Number DE85751182.

From 22. international meeting on nuclear physics; Bormio, Italy (23 Jan 1984).

A semi-classical description of heavy ion collisions is developed with a particular attention to the nucleon flux from one partner through the other one. The phase-space extension of the nucleons is explicitly treated by means of the Wigner transform of the density matrix. Its dynamical evolution is obtained by solving the Landau-Vlasov equation, where collision terms are explicitely introduced. As a matter of fact, the experimental nucleon spectra usually described by a thermal source with an intermediate velocity (around vsub(beam)/2) are interpreted in our framework by the coexistence of one-and two-body dissipation. Multi-differential cross-sections $d^3\sigma/dE d\Omega$ are computed for the $^{12}C(86MeV/u) + ^{12}C$ system and are compared with the experimental data. Comparisons are also given for the ^{16}O (20 MeV/u) + ^{197}Au system.

45598 (GSI—85-9) Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u. Noll, H. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Frankfurt Univ. (Germany, F.R.)). Mar 1985. 112p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE85752135.

The described experiments which were performed at the CERN synchrocyclotron with different target-projectile combinations at different beam energies allow a systematic study of the pion production in nucleus-nucleus collisions below the threshold. Thereby the pion production shows clearly the existence of collective effects in the nucleus-nucleus collision in the energy range of 60-84 MeV/u: 1.) The measured cross sections exceed those predicted in the simple nucleon-nucleon collision with Fermi motion by more than one order of magnitude. 2.) The mean velocity determined from the longitudinal rapidity cannot be explained by single nucleon collisions. 3.) The model of the collective pionic bremsstrahlung describes well both the excitation function, the energy spectra, and the angular distribution. Thereby result slow stopping ranges which indicates that the pions in the collision are produced only during a short time. For the asymmetric systems in the rapidity distribution for low pion energies a structure in the data is seen which can be interpreted as two source velocity components which can be caused by superposition of two processes. For photons with energies above 50 MeV in the nucleus-nucleus collision a cross section was found which is comparable with that of pions with the same whole energy. The high-energy photons can be described by electromagnetic bremsstrahlung in the slowing down of the charge in the nuclear field.

45599 (IAE—3756/2) Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data. Bochkarev, O.V.; Korsheninnikov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 43p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701817.

The inclusive spectra of neutrons from reactions initiated by helium-, lithium- and carbon ions at energies above the Coulomb barrier from 1.6 up to 16 MeV/nucl. are analyzed. The neutrons are produced in the reaction with carbon at 1.6 MeV/nucl. energy as a result of evaporation from a compound nucleus. In all the other reactions the spectra deviation from the equilibrium behaviour is observed. Differential cross sections of neutron production were analyzed twice with the use of representation on the existence of angular-distributed energetic neutron sources. The obtained widths of non-equilibrium neutron, energy distributions cannot be explained by the simplest theories of projectile fragmentation and breakup reactions. These widths are explained in the framework of the exiton- and hybrid models of preequilibrium decay; the models correctly reproduce the form of experimental neutron distributions integrated over the angles, but do not coincide with them in the cross section absolute values. The relaxation times (1-4) x 10^{-22} determined with the use of the hot spot model are in good agreement with the data obtained from the exiton model calculation. The period of the most intensive non-equilibrium emission turned out to be (1.5-3.5) x 10^{-23} s in the hot spot representation and 4 x 10^{-22} s in the exiton representation. Comparison of the preequilibrium neutrons yield cross sections shows a possibility of the existence of the unified mechanism of preequilibrium decay in collisions with both heavy ions and light particles.

45600 (IAEA-SMR—93, pp 63-65) Deuteron exchange mechanism for $^6Li(n,\alpha)$. Weigmann, H. (Commission of the European Communities, Geel (Belgium). Central Bureau for Nuclear Measurements). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

In this lecture the analysis of the low energy $^6Li(n,\alpha)$ cross section in a model which combines resonance amplitudes with a direct deuteron exchange mechanism, is presented. Advantages and shortcomings of the present analysis are discussed, and directions of a future improvement of the model are indicated.

From International conference on particles and nuclei; Heidelberg, F.R. Germany (30 Jul 1984).

45602 (IPNO-DRE—84-20) Comparative study of ($^3He,\pi^-$) and ($^3He,\pi^+$) exclusive reactions on ^7Li and ^{12}C. Bimbot, L.; Hennino, T.; Jourdain, J.C.; Le Bornec, Y.; Reide, F.; Willis, N.; Germond, J.F. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752037.

Differential cross sections of ($^3He,\pi^{+-}$) exclusive reactions have been measured for ^7Li and ^{12}C targets at 235 MeV and 20° laboratory scattering angle. Several levels of the final nuclei have been observed for π^+ as well as π^- production. Simple assumptions for the reactions mechanism are considered for explaining the ratio of π^- to π^+ production.

45603 (ISN—84-24) Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei. de Swiniarski, R.; Pham, D.L. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires). 1984. 5p. (CONF-8406243—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751212.

From Europhysics conference on nuclear reactions; Crete, Greece (24 Jun 1984).

The aim of this paper is to present the first attempt to investigate some possible systematic trend of optical model parameters by analyzing, through the standard optical model, some of the available data for elastic scattering of polarized protons on light nuclei ranging from ^{16}O to ^{26}Mg.

45604 (JAERI-M—84-010, pp 393-399) Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University. Yamamoto, Junji; Takahashi, Akito (Osaka Univ., Suita (Japan). Faculty of Engineering). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

Some of the recent experimental results of double differential neutron emission cross section (DDX) are shown, that have been measured using the intense 14 MeV neutron source OKTAVIAN of Osaka University. The new data for Li, O, F, Si, Be and Pb are compared with multi-group DDX produced from ENDF/B-IV library.

45605 **(JINR—1-84-491) About the size of a source forming light fragments emitted in relativistic nuclear interactions.** Avdejchikov, V.V.; Lozhkin, O.V.; Murin, Yu.A.; Oplavin, V.S.; Gorshkova, N.L.; Zhidkov, N.K.; Mrowczynski, S.; Nikitin, V.A.; Nomokonov, P.V.; Zlomanczuk, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701840.

Double differential cross sections of hydrogen and helium isotopes production in the target-nucleus fragmentation region are measured at 45 deg, 90 deg and 185 deg emission angles in ^{4}He+Be, C, Al, Cu, Ag, Au reactions at 3.33 GeV/nucleon beam kinetic energy. The size of fragment formation source is determined depending upon atomic number of a target-nucleus and secondary particle registration angle. It is shown that a root-mean-square radius of the source does not depend on energy and sort of an initial particle.

45606 **(JINR—E-1-84-492) Analysis of correlation effects in multinucleon CC interactions at 4.2 GeV/c per nucleon in terms of collective variables.** Agakishiev, H.N.; Didenko, L.A.; Gasparian, A.P.; Grishin, V.G.; Kuznetsov, A.A.; Metreveli, Z.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701844.

An analysis of correlation effects in multinucleon CC interactions at 4.2 GeV/c per nucleon is being carried out in terms of collective variables. It is shown that the correlated emission of proton pairs with large transverse momenta is observed in CC interactions. In the effective mass spectrum of correlated protons there are maxima in the mass range Msub(eff.)=2.15; 2.23; 2.32; and 2.50 GeV which can be an evidence for the existence of dibaryon resonances.

45607 **(JINR—E-4-84-456) Investigation of the reaction ^{16}O(p,n)^{16}F at Esub(p)=135 MeV.** Gareev, F.A.; Ershov, S.N.; Gmitro, M.; Cejpek, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701826.

Submitted to the journal Sov. J. Nucl. Phys. .

The ^{16}O(p,n)^{16}F reaction at 135 MeV has been analyzed the framework of the distorted-wave impulse-approximation (DWIA). Both direct and exchange mechanisms of nucleon knock-out are taken into account. Including the n-particle n-hole (n=0, 1, 2) correlations in the wave functions of A=16 nuclei improves the description of experimental data: diminishes the absolute value of the cross sections about twice as compared with the calculations using the simple particle-hole structure models.

45608 **(JINR—R-4-84-443) Analysis of form factors of electric transitions in light nuclei with the use of electromagnetic current continuity equation.** Gmitro, M.; Kaipov, T.D.; Rzhizek, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701833.

The use of continuity equation for the electromagnetic current leads to the modification of impulse approximation for the formfactors of electric-type transitions. But such procedure is not unique. Two methods are compared of the continuity condition application: by means of the Eisenberg-Greiner decomposition and by means of Rose's decomposition. Reference material for choosing a more suitable method of electric transition analysis is presented in tables and graphs for one-particle matrix elements for E2-transitions of 1p-shell nuclei and for E1-transitions of nuclei in the vicinity of At16 and A=40. Numerical calculations of electromagnetic form factors are made for the transitions to 2.18 MeV (3^+, T=0) level in ^{6}Li and 7.55 MeV ($5/2^-$, T=1/2) level in ^{13}C nucleus. In the examples considered two decompositions lead to similar results. Since the use of continuity equation effectively includes the contribution of the meson-exchange current, such way of analysis should be preferred.

45609 **(SI—83-22) Search for anomalons in projectile fragments of ^{40}Ar using plastic nuclear track detectors.** Heinrich, W.; Drechsel, H.; Trakowski, W.; Beer, J.; Brechtmann, C.; Dreute, J.; Sonntag, S. (Siegen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 7 -Naturwissenschaften 1 (Physik)). 1983. 10p. Fachinformationszentrum Energie, Physik, Mathematik G.m.b.H., Eggenstein-Leopoldshafen, Germany, F.R.

Enlarged cross-sections for projectile fragments of relativistic nuclei have been observed within the first few centimeters after their emission in Bevalac and cosmic ray experiments with nuclear emulsion. We performed an experiment using plastic nuclear track detectors to investigate this phenomenon. A new automatic measuring technique for heavy ion tracks in these detectors enables us to analyze large numbers of fragmentation reactions. The tracks of 14185 fragments with charges $9 <= Z <= 15$ produced in collisions of relativistic ^{40}Ar beam particles were scanned for interactions. Based on 6444 charge changing nuclear collisions we conclude that under our experimental conditions no statistically significant anomalous mean free path effect can be observed.

45610 **Measurement of ^{14}N(γ,π^+)^{14}C (g.s.) at 200 MeV: A test of the distorted-wave impulse approximation for charged-pion photoproduction below the Δ(1232) resonance.** Cottman, B.H.; Min, K.; Stoler, P.; Teng, P.K.; Winhold, E.J.; Yamazaki, M.; Yergin, a.P.F.; Bernstein, A.M.; Blomqvist, K.I.; Distelbrink, J.H.J. (Department of Physics, Rensselaer Polytechnic Institute, Troy, New York 12181). *Physical Review Letters;* **55**: No. 7, 684-687(12 Aug 1985). Contract AC02-76ER03069.

Differential cross sections for ^{14}N(γ,π^+)^{14}C(g.s.) 0^+ 1) have been measured for an incident photon energy E/sub γ/ = 200 MeV at laboratory angles of 45°, 60°, 75°, 90°, 120°, and 140°. Momentum-space distorted-wave-impulse-approximation calculations, using a complete treatment of a one-body pion-photoproduction operator, are found to be in excellent agreement with the experimental data. The effect of the momentum-dependent terms in the nuclear photoproduction operator is observed. The reaction is found to be sensitive to input nuclear structure elements not observable in the (e,e') form-factor data.

45611 **(ITP—84-53-E) Study of form factors of elastic and inelastic electron scattering by ^{20}Ne.** Steshenko, A.I. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1984. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701822.

The elastic electron scattering form factor and also the form factor of inelastic scattering accompanied by nuclear transition into excited states of the ground rotational band are calculated within the Sp(2, R) model reproducing the dynamics of quadrupole nonsphericity of ^{20}Ne. The Sp(2, R) model is shown to describe correctly the experimental dependence of elastic and inelastic (for the $0^+ \rightarrow$ into 2^+ state transition) form factor on the momentum transferred and, consequently, to remove some difficulties experienced by other dynamic models.

45612 (JAERI-M—84-010, pp 365-378) **Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range.** Matsumoto, Tetsuo; Aizawa, Otohiko (Musashi Inst. of Tech., Kawasaki, Kanagawa (Japan). Atomic Energy Research Lab.); Kadotani, Hiroyuki. Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

Total neutron cross sections of Mg, Al, Si, Zr, Nb and Mo at room temperature have been measured in the thermal range using a chopper and TOF facility of the Musashi Institute of Technology Research Reactor.

45613 (JAERI-M—84-010, pp 379-387) **Study on neutron capture gamma-rays in the resolved and unresolved resonance regions.** Kitazawa, Hideo; Igashira, Masayuki; Komano, Haruki; Shimizu, Michio; Terazu, Kuninobu; Fukui, Hidehiro (Tokyo Inst. of Tech. (Japan). Research Lab. of Nuclear Reactor). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

We have measured gamma-rays from s- and p-wave resonance neutron capture reactions on ^{28}Si and ^{56}Fe. Anomalous, strong gamma-ray transitions to the ground and first excited states of ^{57}Fe have been observed for neutron capture by ^{56}Fe. In the unresolved resonance region neutron capture gamma-ray spectra with the pigmy resonance have been obtained for ^{141}Pr, ^{159}Tb, ^{165}Ho, ^{181}Ta and ^{197}Au.

45614 **(JINR—R-1-84-532) Free path length of neon-22 fragments in photoemulsion at 4.1 A GeV/c momentum and anomalon problem.** Bannik, B.P.; Batusov, Yu.A.; Bokova, L.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701845.

6053 interactions of fragments with 3 up to 10 charges have been registered in nuclear photoemulsion irradiated with neon-22 nuclei at 4.1 GeV/c momentum per nucleon. Statistical analysis of mean free paths of these fragments before their interaction with nuclei in photoemulsion has been carried out. No dependence of mean free paths before the interaction upon the distance covered with the fragments has been discovered. No indication to the existence of anomalons has been obtained.

45615 **High-spin states in ^{24}Mg.** LeVine, M.J.; Barrette, J.; Kubono, S. (Brookhaven National Lab., Upton, NY (USA)); Branford, D. (Edinburgh Univ. (UK). Dept. of Physics). *Journal of Physics G: Nuclear Physics;* **10**: No. 11, 1549-1558(Nov 1984).

The ^{12}C(^{16}O,α)^{24}Mg reaction has been used to study states in ^{24}Mg at excitation energies up to 27 MeV. Total widths have been measured for 34 states. Alpha-branching ratios, and α-α angular correlations have been measured for 12 states above 19.5 MeV. Candidates for 10^+ and 12^+ states in ^{24}Mg are deduced from a comparison with shell-model predictions.

45616 **(AERE-R—11464) Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu.** Parker, D.J. (UKAEA Atomic Energy Research Establishment, Harwell. Nuclear Physics Div.; Oxford Univ. (UK). The Queen's Coll.). Sep 1984. 258p. HMSO, London, price Pound 12.00.

The contributions of complete fusion and particular incomplete fusion processes, and the importance of pre-equilibrium emission have been investigated for medium energy light heavy ion nuclear reactions on medium mass targets. The system chosen for study was the compound nucleus ^{63}Cu, and the thesis describes studies of the three entrance channels: α + ^{59}Co, ^{7}Li + ^{56}Fe and ^{12}C + ^{51}V.

45617 **(FRNC-TH—1183) Contribution to very inelastic collisions. Emission mechanism of light charged particles and angular momentum transfer in ^{40}Ar (280 MeV) + ^{58}Ni nuclear reactions.** Babinet, R. (Paris-11 Univ., 91 - Orsay (France)). Jul 1981. 270p. (In French). NTIS (US Sales Only), PC A12/MF A01. File Number DE85751204.

This work ends a particularly detailed study on very inelastic collisions in ^{40}A (280 MeV) + ^{58}Ni reaction. The two experiments in coincidence (fragment-fragment and particle-fragment) which are this work basis, essentially experimental, are the following of the very precise inclusive measurements already done on this system. They allowed to precise many important aspects of the reaction mechanism. Conclusions from a precise analysis of the fragment kinematics near the mass symmetry is the new aspect of this study. Information implicitely contained in the two complementary fragment angular correlation width are particularly detailed. Concerning the particle-fragment coincidence experiment, a quantitative analysis method of the invariant cross sections (in the reaction plane) has been developed; it shows clearly what is the origin of the emitted particles. The result of a two-stage mechanism allows to interpret simply the anisotropy out-of-plane of the alpha particle emission. The individual spin has been obtained for the first time for each of the two fragments of very inelastic collisions in nearly all the mass asymmetry domain.

45618 **(IAE—3755/2) Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data.** Bochkarev, O.V.; Korsheninnikov, A.A.; Kuz'min, E.A.; Chulkov, L.V.; Yan'kov, G.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 39p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701846.

The 1.5-meter isochronous cyclotron of the Kurchatov Nuclear Energy Institute with the time-of-flight spectrometer is used to measure energy spectra and angular distributions of neutrons appearing in reactions ^{62}Ni+ ^{3}He, ^{4}Ni+α, ^{59}Co+^{6}Li and ^{53}Cr+^{12}C. At the energy of incident particles 10-15 MeV/nucl. experimental results prove the presence of a considerable share of high energy neutrons in the general spectrum emitted by nuclei preliminarily in the forward direction.

45619 **(JINR—R-4-84-32) Transversal E1-resonance in spherical nuclei.** Vdovin, A.I.; Nguen Din' Dang; Ponomarev, V.Yu.; Shilov, V.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701815.

Submitted to the journal Phys. Scr.

The spin-flip1^--states in medium and heavy spherical nuclei are investigated within the quasiparticle-phonon model. The random phase approximation calculations predict the existence of a collective 1^--state formed by the isovector spin-dipole force. Its excitation energy is about 20 MeV. this state is intensively excited by the inelastic electron scattering at momentum transferred q approximately 0.5-0.7 fm^{-1}, at the scattering angles theta > 60 deg. The main contribution to its excitation comes from the transversal formfactor. Therefore, it can be recognized as the transversal formfactor. Therefore, it can be recognized as the transversal E1-resonance. The interaction with two-phonon states causes a very strong fragmentation of the resonance, thus making its experimental observation hardly probable. The consideration is carried out for the ^{58} Ni nucleus.

45620 **Relativistic impulse approximation for meson-nucleus scattering in the Kemmer-Duffin-Petiau formalism.** Clark, B.C.; Hama, S.; Kaelbermann, G.R.; Mercer, R.L.; Ray, L. (Department of Physics, The Ohio State University, Columbus, Ohio 43210). *Physical Review Letters;* **55**: No. 6, 592-595(5 Aug 1985).

The first application of the Kemmer-Duffin-Petiau wave equation for spin-0 particles to meson-nucleus scattering is given. A relativistic impulse approximation using the Kemmer-Duffin-Petiau formalism is used to calculate meson-nucleus optical potentials. Comparison with the nonrelativistic impulse approximation is given.

A 46 mg/cm^2 thick sup(nat)W target was irradiated with an 11.5 MeV/u ^{82}Se beam. On-line mass-separated samples of projectile-like neutron-rich products from multi-nucleon transfer reactions were investigated by β-γ spectroscopy in the mass region A = 52-79. Decay properties of the nuclei ^{61}Mn (0.71 s), ^{64}Fe (2.0 s), ^{65}Co (1.25 s), ^{69}Ni (10 s) and sup(73m)Zn (5.8 s) were measured for the first time. For ^{67}Ni a decay scheme could be constructed using information from new γ-transitions. The known decay schemes of ^{60}Mn, ^{63}Fe, ^{63}Co and ^{69}Cu were extended. New half-life values of neutron-rich isotopes are compared with theoretical predictions.

(Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 11p. (In Russian). (SERP-E—102). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701847.

Submitted to the journal Nucl. Instrum. Methods.

Angular distributions of muons, scattered on the Cu target of 1 radiation length thick are measured up to approximately 10 THETA$_0$ (THETAsub(0)=chisub(c)Bsup(1/2) are standard parameters of the Molie're theory). The results are compared with the Molie're theory; theoretical scattering probabilities are found to exceed the experimental data by a factor of 2-5 at scattering angles greater than 5THETA$_0$. The same comparison with the modified Molie're theory that includes a nuclear form factor is shown to remove the above-mentioned discrepancies within the achieved statistical errors.

Summary of a doctorate thesis.

The microscopic description of the quadrupole collective dynamics in even krypton isotopes is presented. A microscopic calculation of Bohr's collective Hamiltonian is used to describe the collective motion in ^{76}Kr. A single-particle basis calculated in a deformed Woods-Saxon potential leads to the potential energy surface obtained by the Strutinsky renormalization procedure, and to the inertial functions determined in the cranking model approximation. The collective Schroedinger equation is solved numerically to analyse the low-energy, even parity states in ^{76}Kr. A good agreement between experiment and theory is obtained without specifically adjusting any parameter in the model for this nucleus. Some results regarding statical and dynamical characteristics of sup(74,78,80)Kr isotopes are also presented. The asymmetric rotor model with admixture of two quasiparticles is used to describe the sup(66,68,70)Ge and the sup(64,66)Zn isotopes. The interplay of collective and single particle motions is further investigated by magnetic moment measurements using the method of integral angular correlations perturbed by recoil into gas. The results involve g-factor measurements for ^{166}Ho, ^{68}Ge, ^{64}Zn, ^{66}Zn and ^{68}Ga nuclei. Finally, a discussion of further possible improvements and more general developments of the problems under investigation is given.

Summary of a doctorate thesis.

The main results presented here cannot be interpreted in terms of the direct reaction model or the statistical models and one can more or less explicitely use some nuclear configurations for their interpretation. The first chapter deals with the so-called second order intermediate structures observed in the elastic and inelastic proton scattering on ^{66}Zn and ^{70}Ge targets in the energetic regions of some isobaric analog resonances. A formal theory for their interpretation is developed and the comparison with the experimental data is presented. New experimental results on the resonant structures observed in the elastic and inelastic scattering of ^{12}C on ^{24}Mg are presented in the second chapter. Detailed statistical analysis and their interpretation is also presented. Charge equilibration in deep inelastic collisions is the main subject of the third chapter. The experimental results obtained by the ^{98}Mo + ^{154}Sm collision at 12 MeV/n, a quantum treatment of a damped harmonic oscillator and the comparison with the experimental data are given. In the last chapter, some results on the existence of two other processes which could be involved in the main topic are presented. Those processes are: the fast fragmentation and preequilibrium charged particles emission. All these processes originate in the excitation of some simple configurations which can be seen on "doorway" states ("Hallway" in the case of the second intermediate structures). The coupling of these states to other more complicated excitation modes of the nuclei and to outgoing channel gives the possibility to study the nuclear dynamics. This justifies the interest for their detailed theoretical and experimental investigations.

Summary of a doctorate thesis.

A detailed analysis is presented, based on Hauser-Feshbach statistical model calculations of the γ-ray excitation functions measured in the sup(74,76)Ge (^{12}C, xn) and sup(72,73)Ge (^{16}O,xnyp) reactions. The most usual quantities provided by the in beam γ-ray measurements such as the cross sections for the population of the final states as well as the decay scheme and the degree of alignment of these states mainly offer the means of testing models of both the reaction mechanism and nuclear properties of high excitation energies, since they concentrate information on the whole reaction process. Experimental information on sup(85,86)Sr and sup(85,86)Y, γ-decay scheme and the excitation functions for the population of the final states were obtained by sub(74,76)Ge (^{12}C,αn), n = 2-4, sup(74,76)Ge (^{14}N,xn) n = 3-5, sup(72,73)Ge (^{16}O,xnyp), x = 1-3, y=1 reactions at incident energies between 35 and 60 MW. Statistical model calculations in the Hauser-Feshbach formalism have been compared with the experimental γ-ray excitation functions. The competitive emission of neutrons, protons, alpha particles and gamma rays from the compound nucleus has been considered in the calculations. The calculations describe satisfactorily the total cross sections for the population of the 2n, 3n and 4n channels for ^{12}C + sup(74,76)Ge and 2n, np, 3n and 2np channels for ^{16}O + ^{73}Ge. The calculations are sensitive to the characteristics of the excited levels (such as spin values) but htis this sensitivity could be exploited with some reliability only if one makes use of a rather complete level scheme in the calculations. In the case of 2n, np, 3n and 2 np channels for ^{16}O+^{73}Ge one concludes on the reliability of consideration some structural aspects in the calculations.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

High-resolution transmission measurements of zirconium metal samples have been carried out at ORELA using the 80-m flight path and an improved ^{6}Li-glass scintillation neutron detector. Four different thicknesses of the pure zirconium metal and one sample of zircaloy were used in four separate experiments. The transmission data for these samples were measured at room temperature, and one sample was cooled to liquid nitrogen temperature. These data were analyzed using the multilevel R-matrix computer code SAMMY. The resonance parameters obtained for the 292.4-eV resonance of ^{91}Zr (including both statistical and systematic uncertainties) are: J/sup π/=3^{+}, E$_0$=292.40 +- 0.10 eV, Γ/sub n/=665 +- 5 MeV, Γ/sub γ/=131 +- 10 MeV, and cc(Γ/sub n/, Γ/sub γ/)=0.14. The parameters obtained for the 301.1-eV resonance in ^{96}Zr are: J=1/2, E$_0$=301.14 +- 0.10 eV, Γ/sub n/=223 +- 7 meV, Γ/sub γ/=285 +- 38 MeV, and cc(Γ/sub n/, Γ/sub γ/)=0.80.

45629 (GSI—85-2) **Cold fusion in symmetric ^{90}Zr induced reactions.** Keller, J.G. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Technische Hochschule Darmstadt (Germany, F.R.). Fachbereich 5 - Physik). Feb 1985. 88p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE85751888.

At the velocity filter SHIP of the Society for Heavy Ion Research in Darmstadt cross sections for evaporation-residue-nucleus formation in the reactions ^{90}Zr + ^{89}Y, sup(90,92,96)Zr, ^{94}Mo were measured. In four of the reactions leading to the compound nuclei ^{179}Au, ^{180}Hg, ^{182}Hg, and ^{184}Pb for the first time in reactions of two heavy partners with mass numbers >20 radiative capture, i.e. deexcitation only by emission of γ radiation, was observed. A comparison of the measured cross sections for radiative capture with evaporation calculations leads to the final conclusion that either the γ-strength in the different compound nuclei is very different, or that the energy or angular momentum dependence of the level-density is wrongly described by the Fermi gas model at energies between 5 and 20 MeV. From the cross sections for evaporation-residue-nucleus formation fusion probabilities for central collisions were derived. The fusion probabilities show a strong dependence of the sub-barrier fusion from the nuclear structure of the contributing reaction partners. The slope of the fusion probability below the classical fusion barrier cannot be consistently described even by newer models. Below the lowest fusion barrier the fusion probability decreases with decreasing energy remarkably faster that predicted by a WKB calculation. This indicates that either the shape of the barrier is different from that predicted by the potentials, or that the mass dependence of the tunnel effect is not correctly described by the WKB calculation.

45630 (GSI—85-8) **Nuclear moments and changes of the mean square nuclear charge radii in tin and indium.** Lochmann, H. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Mainz Univ. (Germany, F.R.). Fachbereich Physik). Mar 1985. 76p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE85752100.

By collinear laser spectroscopy on stable tin isotopes an on radioactive neutron-deficient tin isotopes produced by heavy ion fusion as evaporation residual nuclei by measurement of hyperfine structure splittings and isotope shifts the nuclear moments and the change of the mean square nuclear charge radii were determined. The present thesis is a continuation of the first measurements on evaporation residual nuclei of the indium isotope chain (Z=49) and presents results for the isotopes sup(105,106)In as well as the results on the isotope chain of tin (Z=50), with the radioactive isotopes sup(108,109,110)Sn and the chain of the stable isotopes $^{112-124}$Sn. The radioactive tin and indium isotopes were produced in the reaction channels ^{98}Mo (^{16}O, 3n-6n) $^{111-108}$Sn and ^{94}Mo (^{16}O, p3n, p4n) sup(106,105)In. In tin the transition with lambda=452.5 nm (5p^2 ^{1}S$_0$ -> 5p6s ^{1}P$_1$) was excited and fluorescence at lambda=326.3 nm (5p6s ^{1}P$_1$ -> 5p^2^{1}D$_2$) detected. In indium the optical excitation ensued with lambda=451.1 nm (5p ^{2}Psub(3/2) -> 6s ^{2}Ssub(1/2)) and the fluorescence detection with lambda=410.2 nm (6s ^{2}Ssub(1/2) -> 5p ^{2}Psub(1/2)). The magnetic dipole moments derived from the hyperfine structure splittings of the indium spectra show for all isotopes of the whole chain $^{105-115}$In at each nuclear spin a relatively constant slope. From the slope of the measured spectroscopic quadrupole moments a constant static deformation of $<\beta>$ = 0.12 results.

45631 (GSI—85-12-Prepr.) **Decay properties of the new proton-rich nucleus ^{104}Sn: Mass determinations beyond the proton drip line.** Rathke, G.E.; Rykaczewski, K.; Kirchner, R.; Klepper, O.; Koslowsky, V.T.; Roeckl, E.; Schardt, D.; Grant, I.S.; Larsson, P.O.; Plochocki, A. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Feb 1985. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751897.

Submitted to Z. Phys., A.

The new proton-rich nucleus ^{104}Sn was produced in a ^{50}Cr(^{58}Ni, 2p2n)^{104}Sn reaction. Its half-life was measured to be 21 +- 1 s. From a newly established partial decay scheme, a Qsub(EC) value of 4000 (+650-300) keV was estimated. The resulting mass excess value for ^{104}Sn, combined with decay energies for α and proton emission, leads to mass excess values for the nuclei ^{108}Te, ^{109}I, ^{112}Xe, and ^{113}Cs. These mass values are compared to predictions of mass formulae.

45632 (INIS-mf—9695) **Study of the cumulative effect in meson and nucleonic system production.** Pentia, M. (Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)). 1984. 25p. (In Romanian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701818.

Summary of a doctorate thesis.

Relativistic nuclear reactions with protons (deuterons) 8.0 GeV/c in the limiting fragmentation region (4-momentum transfer Q >= 1 GeV), with the particle production energy exceeding the nucleon-nucleon kinematical limit, were studied. The data acquisition, processing and analysis methods are presented along with experimental results like energy, angular distributions and A-mass de-

pendence, carried out on DISC-2 Spectrometer (Dubna). Scale invariance character of the meson production, tells about local, point-like interactions, interpreted like violent quark collisions. The quark structure functions of nuclei was obtained, proving the existence of multiquark states in nuclei.

45633 **(IPNO-DRE—84-33) Energy dissipation in nucleus-nucleus collisions around 40 MeV per nucleon. New phenomena or transition trends.** Lefort, M.; Borderie, B.; Jacquet, D. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1984. 37p. (CONF-8409225—3). NTIS (US Sales Only), PC A03/MF A01. File Number DE85752038.

From Colloquium on heavy ion collisions; Cargese, France (2 Sep 1984).

We have tried to present some of the new aspects which appeared recently in nucleus-nucleus reactions at collision velocities in the range of 0.2 c to 0.3 c. From a set of experimental data obtained at CERN and GANIL by the Orsay Nuclear Chemistry Group, we have tentatively extracted some preliminary conclusions about the possibility of very large energy deposits occuring in more or less central collisions. We have shown that, when nuclear matter is heated at excitation energies greater than 3 to 4 MeV per nucleon, quite a number of new aspects appear in the de-excitation process. Also, for intermediate impact parameters, a new phenomena, predicted by Bondorf and by Campi et al., might have been observed: "multifragmentation". We should emphazise that what is presented here results from a collective work and is an attempt to show how physicists try to progress from the raw materials of their experiments towards some more elaborated considerations.

45634 (JAERI-M—84-010, pp 148-164) **Nuclear reaction models newly adopted in JENDL-3 evaluation.** Kikuchi, Yasuyuki (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

The spherical optical model and the statistical model based on the compound nucleus assumption have been mainly used in JENDL-2 evaluation. These models cannot consider (1) the direct reactions, (2) the pre-equilibrium processes and (3) the nuclear deformation effect. This drawback is particularly severe for high energy neutrons important for fusion neutronics. In order to overcome this drawback, it was decided to adopt the coupled channel optical model and the evaporation model with pre-equilibrium process in JENDL-3 evaluation. The ECIS and GNASH codes were selected. A special care was paid to combine the coupled channel optical mode to the usual statistical model. The cross sections of natural iron were re-evaluated with these newly adopted models. The results reproduce satisfactorily the experimental data of the angle-energy double-differential cross sections for 14 MeV neutrons, proving the applicability of the present model.

45635 (JAERI-M—84-010, pp 221-230) **Nuclear data in the intermediate energy region. Yield and transport of spallation neutrons.** Nakahara, Yasuaki (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

Summary has been made of nuclear data in the energy region of 20 MeV – 2 GeV, which are required in INS(Intense Neutron Source) developments and analyses of transmutation of the radioactive wastes and breeding of the fissile material. From the viewpoint of nucleon transport calculations, discussions are made on the foundamental concepts of nuclear data and the present status of data on spallation reactions, fission cross sections and neutron yields.

45636 (JAERI-M—84-010, pp 277-285) **Measurements of double differential cross sections (DDX) for several medium-weight and heavy nuclei at 15 MeV.** Iwasaki, Shin (Tohoku Univ., Sendai (Japan)). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

Measurements of double differential cross sections (DDX) for several intermediate and heavy nuclei have been performed at 15 MeV in the Dynamitron Laboratory at Tohoku University. Comparison of the experimental data with the evaluated nuclear data file, ENDF/B-IV revealed that the data file could not reproduce the experimental ones, particularly in the angular distributions. Nuclear model calculation showed that the preequilibrium process was important in the present incident energy region. Measurements have been performed for titanium, niobium, molybdenum, lead, and thorium (in progress), including the light elements, carbon and aluminum.

45637 (JAERI-M—84-010, pp 388-392) **Neutron activation cross section of molybdenum isotope at 14.8 MeV.** Katoh, Toshio; Amemiya, Susumu; Ishibashi, Kei-ichi (Nagoya Univ. (Japan). Faculty of Engineering). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

The neutron activation cross section of Molybdenum isotopes have been measured for the 14.8, MeV neutron. The cross sections have been determined with reference to the known $^{27}Al(n,\alpha)\ ^{24}Na$ and the $^{27}Al(n,p)\ ^{27}Mg$ reactions. The cyclic activation method was employed for the γ-ray measurement of short-lived nuclei. Cross section data are presented for (n,2n), (n,p) and (n,α) reactions on Mo isotopes.

45638 **(JINR—6-84-96) Investigation of the ^{133}Ce internal conversion electron spectrum.** Gromov, K.Ya.; Islamov, T.A.; Kononenko, G.A.; Lebedev, N.A.; Morozov, V.A.; Muminov, T.M.; Kholmatov, A.Kh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1984. 11p. (In Russian). (CONF-8404189—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701854.

From 34. conference on nuclear spectroscopy and nuclear structure; Alma-Ata, USSR (17 Apr 1984).

Submitted to the journal Bull. Acad. Sci. USSR, Phys. Sci. .

The spectrum of internal conversion electron (ice) of ^{133}Ce is studied using the beta-spectrograph with permanent magnetic field. The lines of 16 earlier unknown γ-transitions are detected. The mixing ratios of the γ-transition multipolarities with energies 42.7, 58.4, 76.9, 87.9, 97.3 and 130.8 keV are determined from the ratios of intensities of the ice l_1-, l_2- and l_3-l lines. Conclusions on the multipolarity for 40 γ-transitions are made for the first time.

45639 **(JINR—6-84-220) Internal conversion electrons in the ^{134}Ce decay and ^{134}La levels.** Islamov, T.A.; Lebedev, N.A.; Kholmatov, A.Kh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1984. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701852.

Submitted to the journal Bull. Acad. Sci. USSR, Phys. Sci. .

Internal conversion electron (ICE) spectrum of ^{134}Ce (Tsub(1/2)=75.9 h) has been measured by means of a beta spectrograph with a constant magnetic field. Energies and relative intensities of ICE lines for 27 γ transitions related to ^{134}Ce decay have been determined. From the intensity ratio of L_1-, L_2- and L_3-lines of ICE the multipolarity composition of the following transitions has been determined: 22.7 keV - M1 + 1.5(3)%E2; 31.9 keV - M1 + 2.8(6)%E2; 39.1 keV - M1 + 1.9(5)%E2 and 162.3 keV - M1 + 36(14)%E2. Multipolarities for 26 γ transitions have been determined, 23 of them - for the first time. Experimental results obtained permit to ascribe the quantum characteristics to 1^+ levels of ^{134}La with 54.7; 93.7; 162.3; 252.5; 294.3; 355.5 keV energies; and to 0^+, 2^+ levels with 31.9; 136.3; 187.0 and 205.3 keV energies.

45640 **(JINR—6-84-388) Excited states of the odd-odd ^{132}La nucleus.** Abdurazakov, A.A.; Kholmatov, A.Kh.; Vylov, Ts.; Kalinnikov, V.G.; Mikhajlova, M.M.; Zhelev, Zh.; Islamov, T.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701853.

Submitted to the journal Bull. Acad. Sci. USSR, Phys. Sci. .

Spectra of γ-rays and internal conversion electrons of ^{132} are investigated. 56 γ-transitions are observed, 36 of them are new. For 36 γ-transition multipolarities are determined, for 27 of them - for the first time. The experimental results obtained at the ^{132}Ce vecay permit to describe the quantum characteristics for the 2^+ level of ^{132}La with 155.4 and 216.8 keV energies; and for the 1^+ level with 182.1; 279.1; 359.0; 406.8; 485.0; 523.8; 606.7; 648.3; 731.7; 820.0 keV energies.

45641 (JINR—D-7-83-644, pp 158-172) **Laser spectroscopy of radioactive beams.** Otten, E.W. (Mainz Univ. (Germany, F.R.). Inst. fuer Physik). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem of using the laser spectroscopy in investigations radioactive beams is considered. The main attention is payed to the isotope shift of nuclear charge radii delta $<r^2>$. The general trend of delta$<p^2>$ is discussed. Predictions for delta$>r^2>$ in the framework of the droplet model are given. It is noted that two parameter interpretation of the isotope shift based on the droplet model works the better, the further the distance spans and the clearer the nuclear structure is.

45642 (JINR—D-7-83-644, pp 86-101) **Properties of nuclei far from stability studied recently at the GSI on-line mass separator.** Klepper, O. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Three experiments at the GSI mass-separator facility on-line to the heavy-ion accelerator UNILAC are described. The first one is devoted to the problem of production of neutron-rich isotopes in quasi-elastic and deep-inelastic transfer reactions. The second one is related to direct and beta-delayed proton emission of lanthanides, especially the direct proton decay of ^{147}Tm and β-delayed proton emission of ^{147}Er and ^{147}Dy. Finally, the collinear laser spectroscopy of light indium isotopes is described.

45643 **(JINR—E-1-84-411) Characteristics of the particle production process in hadron-nucleus collisions: multiplicities and dispersions.** Sredniawa, B.; Strugalska-Gola, E. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701838.

Multiplicities, i.e., the numbers of particles produced in hadron-nucleus collisions and dispersions of these mean numbers are calculated assuming the model of Strugalski. Energy- and A-dependence of multiplicities are calculated for 24 nuclei from $_6{}^{12}$C to $_{92}{}^{238}$U for pion-nucleus collisions in the range of 16-147 GeV/c and for proton-nucleus collisions between 19 and 1480 GeV/c. Multiplicities are comprised between 4.9 and 13.6 for pion-nucleus collisions and between 5.2 and 31.5 for proton-nucleus collisions. The dispersions of multiplicities are calculated for 10 elements between $_6{}^{12}$C and $_{92}{}^{238}$U in the same energy ranges and vary from 4.2 to 10.1 for pion-nucleus collisions and from 3.0 to 11.0 for proton-nucleus collisions. The agreement with available experimental data is good.

45644 **(JINR—E-4-84-72) Excitation of states with a different lambdasup(π) in the inelastic electron scattering at backward angles.** Ponomarev, V.Yu. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701828.

Submitted to the journal Sov. J. Nucl. Phys.

The cross section of the one-phonon state electroexcitation in ^{90}Zr is calculated in dwba. The electron energy varies from 30 to 140 MeV while a scattering angle is fixed: theta=160 deg. A contribution of the states with different lambdasup(π) (lambdasup(π) = 1^{+-} - 6^{+-}) to the reaction cross section is analysed.

45645 **(JINR—E-4-84-305) Microscopic approach to the description of heavy-ion elastic scattering.** Dao Tien Khoa; Shitikova, K.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701842.

Submitted to the journal Sov. J. Nucl. Phys. .

A microscopic approach is developed for the description of elastic heavy ion scattering to study the nuclear structure effects in heavy ion collisions. Nucleus-nucleus interaction potential is calculated within the folding model. The elastic ^{6}Li, ^{12}C, ^{16}O scattering on sup(58,60)Ni, ^{90}Zr, ^{124}Sn, sup(142,144)Nd, and ^{208}Pb has been investigated. The nuclear densities for light nuclei-projectiles are calculated in the method of hyperspherical functions. The densities for heavy ion targets are calculated within the quasiparticle-phonon model. The results of calculations show that the experimental data can be reproduced in most cases with only the adjustable parameter.

45646 **(JINR—E-4-84-377) Fragmentation of two-quasiparticle states in some spherical nuclei.** Voronov, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701825.

Strength distributions of two-quasiparticle states which could be excited in two-nucleon transfer reactions on some spherical nuclei is calculated within the quasiparticle-phonon model. The experimental data for (r.t) and (α, ^{6}He) reactions are analysed. It is shown that bumps observed via these reactions are specified by excited valence-hole and hole-hole states.

45647 **(JINR—R-3-84-42) Right-left asymmetry of γ quanta yield in a neutron resonance of ^{117}Sn with parity nonconservation.** Alfimenkov, V.P.; Borzakov, S.B.; Vo Van Tkhuan; Mareev, Yu.D.; Pikel'ner, L.B.; Frank, I.M.; Khrykin, A.S.; Sharapov, Eh.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1984. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701848.

Submitted to the journal JETP Lett. .

The right-left asymmetry was observed for the first time in the yield of γ quanta (esub(γ) = 9.32 MeV) from radiative capture of polarized neutrons in the channel with total neutron momentum jsub(n) = lsub(n) + ssub(n) = 1/2 was obtained d: GITAsub(psup(1/2))sup(n) = (0.27 +- 0.03)GITAsub(p)sup(n).

45648 **(JINR—R-3-84-668) Differential neutron scattering cross sections and average neutron parameters of cadmium isotopes.** Zo In Ok; Poplova, A.I.; Popov, A.B.; Salamatin, I.M.; Samosvat, G.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1984. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701849.

The averaged differential neutron scattering cross sections are measured for the 106, 108, 110, 112 and 116 even-even cadmium isotopes the booster mode on the IBR-30 reactor experimental values the s-and p-wave streng a functions and the parameters of potential scattering are obtained which correspond to two boundary conditions set on the wave functions. The obtained average parameters of cadmium isotopes for these boundary conditions are tabulated. The new results agree well with the data on neighbouring nuclei and confirm the presence of experimentally found spin-orbital splitting in p-neutron strength function.

45649 **(JINR—R-3-84-669) Measurements of total cross sections of molybdenum and cadmium in the 20-1100 keV range on neutron filtered beam.** Zo In Ok; Popov, A.B.; Samosvat, G.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1984. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701850.

Mo and Cd total cross sections were measured in the booster mode on the IBR-30 reactor using the beam of neutrons having passed through an iron or aluminium filter. The application of filters combined with the time-of-flight method permits to separate neutron energy groups in the 20-1100 keV range and to obtain values of a total cross section of the investigated sample. The obtained values of total cross sections for Mo and Cd are presented as tables and graphs where their values are compared with the scattering cross section data.

45650 **(JINR—R-6-84-66) Level scheme of ^{144}Nd from the (n,2γ) reaction.** Popov, Yu.P.; Sukhovoj, A.M.; Khitrov, V.A.; Yazvitskij, Yu.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1984. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701851.

Submitted to the journal Bull. Acad. Sci. USSR, Phys. Sci. .

The (n, 2γ) reaction on thermal neutrons was studied by the method of summation of amplitudes of coincident pulses from two Ge(Li)-detectors. Intensities of 39 two-quanta cascades populating 5 low-lying states and γ-transition energies in these cascades are determined. Level scheme is constructed which contains 30 levels within the 1310-5725 keV excitation energy range. Results of the measurements are coincided with data obtained by other methods in the excitation energy range up to 3.5 MeV.

45651 **Mass-asymmetric fission of light nuclei.** Sierk, A.J. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **55**: No. 6, 582-583(5 Aug 1985).

Barriers to the mass-asymmetric fission of ^{111}In are calculated in the liquid-drop and in the Yukawa-plus-exponential finite-range models. The calculated barrier heights are compared to those previously inferred from fission excitation functions for 3< or =Z< or =11. The liquid-drop-model barriers are about 12 MeV too high, while the finite-range model gives barriers an average of 1.6 MeV too high. This type of experimental data should make possible a more precise determination of the surface-energy and surface-asymmetry coefficients in semiempirical nuclear mass formulas.

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The results of an extensive study of pion production in the collisions of relativistic ions of d, α and ^{12}C with heavy target Ta performed in Dubna at the energy per nucleon of 4,2 GeV/c are shown. Some new data on rapidity distributions of pions and shape of the multiplicity distributions of pions for various classes of collisions are discussed. (I.L.).

45654 (JINR—D-7-83-644, pp 114-127) **Proton radioactivity of ^{151}Lu and neighbouring nuclei.** Hofmann, S.; Armbruster, P.; Hessberger, F.P.; Munzenberg, G.; Reisdorf, W.; Schneider, J.R.H.; Schott, H.J. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Proton radioactivity of ^{151}Lu and neighbouring nuclei is discussed. Partial proton half-life for transitions ^{151}Lu→^{150}Yb, ^{150}Yb→^{149}Tm and ^{150}Lu→^{149}Yb is calculated. Level schemes of ^{151}Lu, ^{150}Yb and ^{149}Tm which have been obtained by extrapolation of known schemes of πhsub(11/2) nuclei are given. It is shown that a very promising candidate for proton emission is ^{150}Lu and possibly also the 10^+ isomeric level in ^{150}Yb.

45655 **(JINR—R-4-84-355) Problem of low energy neutron inelastic scattering on the ^{152}Sm nucleus.** Dias, Kh.R.; Mehndes, R.L.; Solorsano, R.K. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701832.

Submitted to the journal Sov. J. Nucl. Phys. .

A study of inelastic neutron scattering by the nucleus ^{152}Sm at an incident energies of 2.47 and 2.75 MeV using the coupled channel method has been made. Consideration is made of the 2^+ (0.122 MeV), 4^+ (0.366 MeV) and 2^+ (1.086 MeV) excited states. It is shown that in this energy range the process may be described satisfactorily considering ^{152}Sm as a deformed nucleus with non-axial symmetry with account for the quadrupole and hexadecapole deformations. The scattering process through the compound nucleus is calculated according to the Hauser-Feshbach formula with width fluctuation correction. Excitation of the considered states as through compound nucleus or through direct process gives contribution to the total cross section of the considered reaction.

45656 **(JINR—R-4-84-475) Electric transitions from octupole states in ^{158}Dy and ^{168}Er nuclei.** Mikhajlov, I.N.; Usmanov, P.N.; Chariev, M.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701816.

The phenomenological model is used for the study of the characteristics of low-lying states of negative parity in ^{158}Dy and ^{168}Er. The spectra of octupole bands and reduced probability ratios of E1-transitions are discussed. Calculated level energies and B(E1) value ratios are compared with experimental ones and also with the results of microscopic model. The results of our model show that the simple phenomenological model describes the experimental data more satisfactorily than the microscopic model. Using the phenomenological model, firstly introduced for actinides, it is possible to obtain good results for rare earth region nuclei as well.

45657 Structure of ^{186}Ir and decoupling phenomena in doubly-odd deformed nuclei. Kreiner, A.J. (Comision Nacional de Energia Atomica, Buenos Aires (Argentina). Dept. de Fisica; Brookhaven National Lab., Upton, NY (USA)); Digregorio, D.E.; Fendrik, A.J. (Comision Nacional de Energia Atomica, Buenos Aires (Argentina). Dept. de Fisica); Davidson, J.; Davidson, M. (Buenos Aires Univ. Nacional (Argentina). Facultad de Ciencias Exactas y Naturales). *Nuclear Physics [Section] A;* **432**: No. 2, 451-474(14 Jan 1985).

States of ^{186}Ir, excited through several (HI, xn) reactions, were studied using in-beam γ-ray spectroscopy techniques. A completely new high-spin level scheme, comprising several rotational bands, is presented. The positive-parity ΔI = 2 ground-state band is possibly a first example of a hitherto unreported scheme called double decoupling associated with a proton and neutron both occupying Ω = 1/2 orbits of decoupling parameters larger than unity. A prominent ΔI = 1 negative-parity structure is interpreted as the π tilde hsub(9/2) x ν tilde isub(13/2) band known in Tl isotopes but in a prolate-deformed situation.

45658 Quadrupole moments of the 12$^+$ isomers in ^{188}Hg and ^{190}Hg. Dracoulis, G.D.; Lonnroth, T.; Vajda, S. (State Univ. of New York, Stony Brook (USA). Dept. of Physics); Kistner, O.C.; Rafailovich, M.H. (Brookhaven National Lab., Upton, NY (USA)); Dafni, E. (Weizmann Inst. of Science, Rehovoth (Israel). Dept. of Nuclear Physics); Schatz, G. (Konstanz Univ. (Germany, F.R.). Fakultaet fuer Physik). *Physics Letters, [Section] B;* **149**: No. 4/5, 311-315(20 Dec 1984).

The electric quadrupole interaction of the 12$^+$ isomers in ^{188}Hg and ^{190}Hg has been measured in solid Hg. The quadrupole moments deduced, vertical strokeQ[^{188}Hg(12$^+$)]vertical stroke = 91(11) e fm^2 and vertical strokeQ[^{190}Hg(12$^+$)]vertical stroke = 117(14) e fm^2 suggest a possible change in γ-deformation due to the rotation alignment of the isub(13/2) quasi-neutrons. The temperature dependence of the electric field gradient tensor in Hg was also determined.

45659 (DOE/ER/03346—264) I. Core-quasiparticle coupling model calculations as a test of IBA core descriptions of the even-mass Hg isotopes. II. Decay of mass-separated ^{203}At. Semmes, P.B. (Georgia Inst. of Tech., Atlanta (USA)). Jul 1985. Contract AS05-76ER03346. 157p. (ORO—3346-264). NTIS, PC A08/MF A01; GPO Dep. File Number DE85016956.

Thesis.

The Core-Quasiparticle Coupling Model (CQCM) for odd-mass nuclei, which is based on dynamical field theory and the Bardeen-Cooper-Schrieffer (BCS) method, has been applied to two problems. In the first, a study of Pauli exchange effects for the odd particle in the Interacting Boson-Fermion Model (IBFM) is made by a comparison with the CQCM. Spectra for a partly filled j-shell coupled to Interacting Boson Model cores are calculated in both models, and values of the IBFM exchange parameter A_0 are found which lead to spectra similar to those in the CQCM. In the second application, CQCM calculations have been performed for the i/sub 13/2/ bands in the odd-mass Hg isotopes, h/sub 9/2/ bands in the odd-mass Tl isotopes, and the h/sub 11/2/ bands in the odd-mass Au isotopes (A = 189 to 195). The even-mass Hg core descriptions were taken from previous proton-neutron Interacting Boson Model (IBM-2) calculations, and thus a comparison between the experimental and calculated level schemes for the odd-mass isotopes can be interpreted as a test of the core description. A predicted transition from positive Q(2$^+$) near A = 195 to negative Q(2$^+$) near A = 191 is not borne out by the odd-mass data. The radioactive decay of ^{203}At to ^{203}Po has been studied with mass-separated sources from the UNISOR facility. Time-sequenced spectra of γ-rays, x-rays, and conversion electrons have been obtained, together with γ-γ-t, γ-X-t, e$^-$-γ-t and e$^-$-X-t coincidence data. From this information, a decay scheme has been constructed, consisting of 30 excited states and 45 transitions that incorporate approximately 90% of the decay intensity assigned to ^{203}At. All excited states below 1 MeV have been assigned unique spin-parity values, and the observed level scheme can be qualitatively understood in terms of a particle-core weak coupling description. The ground-state decay energy has been deduced.

45660 (HMI-P—6/84-HF) Decay of the ground state and the 29/2$^+$ isomer in ^{217}Ac and G factor measurements by perturbed angular distribution of α-particles. Decman, D.J.; Grawe, H.; Kluge, H.; Maier, K.H.; Maj, A.; Roy, N.; Agarwal, Y.K.; Blume, K.P.; Guttormsen, M.; Huebel, H. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)). 1984. 64p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85752206.

The nucleus ^{217}Ac was studied using the ^{205}Tl(^{16}O, 4n), ^{206}Pb (^{15}N, 4n) and ^{209}Bi (^{12}C, 4n) reactions. The measurements included α-γ, γ-γ, α-ce and ce-ce coincidence experiments as well as γ-ray and α-particle perturbed angular distribution studies. Results are: g(^{217}Acsup(gs)) = +0.85 (1) and Tsub(1/2)(^{217}Ac sup(gs))=69(4) ns, the shortest known α-decay of a ground state. ^{217}Agsup(m) decays mainly by a γ cascade, but also by α-emission to the single particles states πhsub(9/2), fsub(7/2), isub(13/2) of ^{213}Fr. Spins and parities of levels to the 29/2$^+$ isomer at 2013 keV with Tsub(1/2)=740(40)ns and g=+0.347(5) are determined. The level scheme of ^{217}Ac and the α decay of N=128 isotones are discussed.

45661 (IPNO-DRE—84-34) High energy structures in heavy ion collisions: a multiphonon description. Chomaz, P.; Blumenfeld, Y.; Frascaria, N. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1984. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85752040.

Energy spectra of fragments from the ^{36}Ar + ^{208}Pb reaction at 11 MeV/n exhibit structures at high excitation energies. These structures are interpreted in terms of target multi-phonon excitations built from giant resonances. The importance of such processes for the kinetic energy dissipation in heavy ion collisions is emphasized.

45662 (JINR—R-1-84-552) Total disintegration of lead nuclei by ^{12}C nuclei at 4.5 A GeV/c momentum. Vokal, S.; Karabova, M.; Mukhtorov, A.; Togoo, R.; Tolstov, K.D.; Tuchek, J.; Shumbera, M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701855.

Experimental data on the total, disintegration of lead nuclei by ^{12}C nuclei are presented, and a comparison with ^{4}HePb-collisions at the same 4.5 x A GeV/c momentum is made. It is shown that inelasticity coefficients in these interactions depend essentially on the mass of a primary nucleus and weakly on the target mass. Correlations between different types of secondary charged particles in the azimuthal plane of ^{12}CPb-collisions (with Nsub(h) >= 50) are studied, and a comparison with calculations in the framework of the cascade evaporation model is made. The results obtained point to a possible manifestation of the hydrodynamic "bounce-off" effect.

45663 (Juel-Spez—280) Spectra of nuclei in the lead region in the framework of the RPA with OBE-G-matrix interactions. Kempis, A. von. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Nov 1984. 177p. (In German). NTIS (US Sales Only), PC A09/MF A01. File Number DE85751877.

On the base of an existing Computer program for the calculation of particle-hole RPA matrix elements (especially) for finite-range interactions as well for the solution of the particle-hole RPA equations the corresponding matrix elements for two-particle respectively two-hole nuclei were calculated (and tested) and the corresponding RPA equations solved. For the calculation of the nuclear spectra meson-exchange G-matrix interactions were used instead of phenomenological approaches. The former constitute only a part of the effective NN interaction. A direct comparison with the experimental spectra is therefore just as little convenient as the calculation of transition probabilities or an evaluating comparison of

TDA and RPA. The results let nevertheless recognize following: (1) The density dependence of the effective NN interaction. (2) For the states of two-particle respectively two-hole nuclei the (π+rho) exchange plays no such dominating role as for unnatural-parity states in double-magic nuclei. (3) An approximation of the missing part of the effective NN interaction by delta-function interactions is not sufficient.

45664 **Fission-fragment kinetic-energy distributions from a two-dimensional Fokker-Planck equation.** Scheuter, F.; Gregoire, C. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)); Hofmann, H. (Technische Univ. Muenchen, Garching (Germany, F.R.). Fakultaet fuer Physik); Nix, J.R. (Los Alamos National Lab., NM (USA). Theoretical Div.). *Physics Letters, [Section] B;* **149**: No. 4/5, 303-306(20 Dec 1984).

We calculate the fission-fragment kinetic-energy distribution for the compound nucleus ^{213}At by simultaneously taking into account spreading in a stretching degree of freedom and fluctuations in a fission degree of freedom. This is done in terms of an approximate solution of a two-dimensional Fokker-Planck equation obtained by propagating gaussian bundles in momentum space. When compared as functions of nuclear temperature with experimental data, our calculated mean kinetic energies are in approximate agreement and our calculated variances are slightly too small.

45665 **Study of heavy element structure with in-beam α-, β- and γ-ray spectroscopy.** Meyer, R.A.; Decman, D.J.; Henry, E.A.; Hoff, R.W.; Mann, L.G.; Struble, G.L.; Ussery, L.E. (Lawrence Livermore National Lab., CA (USA)). pp 399-423 of Proceedings of the International symposium on in-beam nuclear spectroscopy held at Debrecen, Hungary, 14-18 May 1984. Vol. 2. Dombradi, Zs.; Fenyes, T. (eds.). Budapest, Hungary; Akademiai Kiado (1984). (CONF-840530—Vol.2).

From International symposium on in-beam nuclear spectroscopy; Debrecen, Hungary (14 May 1984).

The authors' in-beam superconducting conversion electron spectrometer and its use in a (t,p) proton-conversion electron coincidence mode is described. Several examples of completed and ongoing investigations are presented. These include: EO strength from the sup(238)U fission isomer; electromagnetic properties of the Jsup(π)=6sup(+) and 8sup(+) states of sup(210)Pb; single particle and cluster states of sup(213)Fr; the Jsup(π)=21/2sup(+) isomer in sup(197)Au and sup(199)Au; and the cluster states of sup(199)Au. Results of the study of odd-odd deformed sup(244)Am are presented. The latter results performed using neutron-capture gamma-ray and conversion electron techniques are compared to recent developments in the modelling of deformed odd-odd nuclei.

45666 **(GSI—85-10-Prepr.) Superheavy elements.** Hermann, G. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Feb 1985. 20p. (CONF-850129—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751895.

From International symposium on radioactivity; Pune, India (8 Jan 1985).

The present paper reports on the most recent attempts to synthesize superheavy elements.

45667 **(GSI—85-16-Prepr.) Investigation of new neutron-rich isotopes at the GSI on-line mass separator.** Rykaczewski, K.; Kirchner, R.; Klepper, O.; Koslowsky, V.T.; Larsson, P.O.; Rathke, G.H.; Roeckl, E.; Schardt, D.; Zganjar, E.F.; Bosch, U. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Mar 1985. 16p. (CONF-850173—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85752087.

From 23. international winter meeting on nuclear physics; Bormio, Italy (21 Jan 1985).

We review experiments on neutron-rich isotopes, performed at the GSI on-line mass separator over the past four years.

45668 **(IAE—3824/2) Change of the conversion rate of E3 isomer of sup(235m)U (76.8 eV, $1/2^+ \rightarrow 7/2^-$) versus variation of valent zone configuration of atomic shell.** Grechukhin, D.P.; Soldatov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701835.

In the framework of the Hartry-Fock-Slater method calculation of a change in the lambda conversion rate of the E3 isomer (at a transition energy $h/2\pi\omega$=77 eV) relative to the lambda$_1$ for a normal atom configuration (7 s1/2)^2(6d3/2)^1(5f5/2)^2 has been carried out for 14 valent zone configurations of the uranium atomic shell involving considerable variations of 6d, 7s and 5f orbit population. Quite profound Δlambda/lambda$_1$ change versus variation of 5f-orbit population (ΔN(5f) not equal to 0) achieving approximately 8% for ΔN(5f)=+-1 has been discovered, which exceeds Δlambda/lambda$_1$ by an order with changes in population of other orbits (when N(5f)=const). In spite of the fact that a direct contribution of 5f-electrons to conversion is rather small (<=0.1%), variations ΔN(5f) of population of a highly localized 5f orbit lead to the same change in the screening effect of more extended 6p- and 6d-orbits, on which conversion mainly takes place. This phase coincidence effect explains strong total change in Δlambda/lambda$_1$ at ΔN(5f) not equal to 0. Strict correlation of a partial conversion rate with the orbit radius mean square has been found out for the 6p orbits.

45670 (IAEA-SMR—93, pp 119-171) **Nuclear data for fission reactor core design and safety analysis: Requirements and status of accuracy of nuclear data.** Rowlands, J.L. (UKAEA Atomic Energy Establishment, Winfrith). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

The types of nuclear data required for fission reactor design and safety analysis, and the ways in which the data are represented and approximated for use in reactor calculations, are summarised first. The relative importance of different items of nuclear data in the prediction of reactor parameters is described and ways of investigating the accuracy of these data by evaluating related integral measurements are discussed. The use of sensitivity analysis, together with estimates of the uncertainties in nuclear data and relevant integral measurements, in assessing the accuracy of prediction of reactor parameters is described. The inverse procedure for deciding nuclear data requirements from the target accuracies for prediction of reactor parameters follows on from this. The need for assessments of the uncertainties in nuclear data evaluations and the form of the uncertainty information is discussed. The status of the accuracies of predictions and nuclear data requirements are then summarised. The reactor parameters considered include: (a) Criticality conditions, conversion and burn-up effects. (b) Energy production and deposition, decay heating, irradiation damage, dosimetry and induced radioactivity. (c) Kinetics characteristics and control, including temperature, power and coolant density coefficients, delayed neutrons and control absorbers.

45671 (JAERI-M—84-010, pp 286-292) **Measurement of fast neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am.** Kanda, Kazutaka; Sato, Osamu; Yoshida, Kazuo; Imaruoka, Hiromitsu; Terayama, Hiromichi; Yoshida, Masashi; Hirakawa, Naohiro (Tohoku Univ., Sendai (Japan)). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

Neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am relative to ^{235}U were measured in the energy range from 1.5 to 6.6 MeV. The present results are compared with experimental results of others and evaluated data in JENDL-2 and ENDF/B-IV.

45672 (JAERI-M—84-010, pp 293-302) **Measurements of the gamma-ray production cross section at Tohoku University.** Itagaki, Shinjiro (Tohoku Univ., Sendai (Japan)). Mar 1984. (In Japanese). From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

A review is given on the measurements of the gamma-ray production cross section which have been carried out at Tohoku University using 4.5 MV Dynamitron accelerator. Finally the problems to be solved in future are briefly presented.

45673 (JAERI-M—84-010, pp 303-307) **Integral experiments for fission-product yield data.** Akiyama, Masatsugu; An, Shigehiro (Tokyo Univ., Tokai, Ibaraki (Japan). Nuclear Engineering Research Lab.). Mar 1984. (In Japanese). NTIS (US Sales Only), PC A13/MF A01. File Number DE84901547. (CONF-8311187—; NEANDC(J)—97/AU; INDC(JPN)—84/G).

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

The amount of the decay heat of fission products is known very sensitive to the basic fission yield data. Therefore, experiment of measuring the decay heat is one of good integral experiments to evaluate the fission yield data. From this viewpoint, the γ-decay heat of ^{235}U, ^{238}U and ^{232}Th following 14 MeV neutron fissions have been measured, and these data were compared with decay heat data for fast-neutron fissions and summation calculations.

45674 (JINR—D-7-83-644, pp 55-75) **Some problems of fusion and fission of heavy nuclear systems.** Oganesyan, Yu.Ts. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Some aspects of fission and fusion of heavy nuclear systems are discussed. The mechanism of "cold" fusion of complex nuclei is investigated. The data of experiments on the production of isotopes with Z=105 and Z=107 during ^{209}Bi irradiation with sup(48,49,50)Ti ions and sup(206,207,208)Pb irradiation with ^{55}Mn ions are presented. Experiments on synthesis of 109 element and 108 element are considered. The results obtained prove that limitation in the method of "cold fusion" is determined by the mechanism of fusion of complex nuclear systems under conditions of strong Coulomb interaction of partners at all stages of collective motion from the moment of contact to the production of a compound nucleus.

45675 (JINR—E-4-84-446) **Nuclear decay by emission of charged particle-superasymmetric fission process.** Poenaru, D.N.; Ivascu, M.; Greiner, W.; Sandulescu, A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 91p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85701836.

The macro-microscopic method, adapted for superasymmetric fission was applied to the alpha decay and other kinds of charged particles emission which are possible due to the nuclear shell structure. Three macroscopic models (the liquid drop model, the finite range of nuclear forces model and the Yukawa exponential model) are extended for nuclear systems with different charge densities. Various numerical methods for the computation of Coulomb and surface energy of a general shape nucleus are presented along with analytical results for some particular shapes. A phenomenological correction was used to obtain the experimental Q-value. This formalism was applied to the alpha decay from the ground state and from a fission isomeric state. A time dependent Hartree-Fock method is used to estimate the zero vibration energy. A new semiempirical formula giving the best estimates for the alpha decay lifetimes was derived and used to predict new alpha emitters. For this new mode of decay intermediate between alpha decay and the traditional fission, larger probabilities are obtained for the combinations of parent-nucleus-heavy cluster leading to a magic daughter nuclei or not too far from it.

45676 (JINR—R-4-84-326) **Decay of heavy nuclei with cluster emission.** Poehnaru, D.N.; Ivashku, M.; Sehndulesku, A.; Grejner, V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701837.

The life-times of some heavy nuclei relative to the spontaneous emission of various clustors heavier then alpha particle are estimated with a model extended from the fission theory of alpha decay, showing that this phenomenon is a new manifestation of the nuclear shell structure. A large probability is obtained for the combinations "parent-heavy cluster" leading to a magic daughter or not too far from it. The analytical formula obtained allows one to handle large number of cases to search for new kinds of radioactivities.

45677 (JINR—R-6-84-422) **Search for superheavy in thermal waters of the Baikal rift zone.** Flerov, G.N.; Dmitriev, S.N.; Lomonosov, I.S.; Pinneker, E.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701839.

In searches for superheavy elements in nature the sample selection and development of the methods of SHE separation from these samples are the problems of primary importance. Bearing in mind the high volatility predicted for the sought elements and to simplify the methods of their concentration it is proposed to use low-mineralized thermal waters from the abyssal ruptures of the Baikal rift zone. The concentration methods used are sorption on cation-exchange and anion-exchange resins and on ampholytes with different functional groups. The spontaneous fission activity exceeding the background has been observed for certain samples of sulfacationides and the corresponding concentrates. The concentration of the spontaneously fissioning nuclide other than uranium in the thermal waters was estimated to bl 10^{-16} g/g. An assumption has been advanced that the spontaneously fissioning nucleide detected can be assigned to the region of superheavy elements. It has been noted that it can be alternatively assigned to an uncommon spontaneously fissioning isotope of known radioactive element (e.g, protactinium).

45678 (NEANDC(J)—96/U) **Evaluation of neutron nuclear data for ^{246}Cm and ^{247}Cm.** Kikuchi, Yasuyuki. (Japan Atomic Energy Research Inst., Tokyo). Jan 1984. 88p. (JAERI-M—83-236; INDC(JAP)—83/L). NTIS (US Sales Only), PC A05/MF A01. File Number DE84900755.

Neutron nuclear data of ^{246}Cm and ^{247}Cm have been evaluated. Evaluated quantities are the total, elastic and inelastic scattering, fission, capture, (n,2n), (n,3n) and (n,4n) reaction cross sections, the resolved and unresolved resonance parameters, the angular and energy distributions of the emitted neutrons, and the average number of neutrons emitted per fission. The fission cross section was evaluated mainly on the basis of measured data. The other cross sections were calculated with the optical and statistical models because of scarce measured data. Discussion is given on the nuclear model calculations.

45679 **Gamma branch from the sup(238)U shape isomer.** Kantele, J.; Stoeffl, W.; Ussery, L.E.; Decman, D.J.; Henry, E.A.; Estep, R.J.; Hoff, R.W.; Mann, L.G. (Lawrence Livermore National Lab., CA (USA)). pp 425-431 of Proceedings of the International symposium on in-beam nuclear spectroscopy held at Debrecen, Hungary, 14-18 May 1984. Vol. 2. Dombradi, Zs.; Fenyes, T. (eds.). Budapest, Hungary; Akademiai Kiado (1984). (CONF-840530—Vol.2).

From International symposium on in-beam nuclear spectroscopy; Debrecen, Hungary (14 May 1984).

The γ-ray decay of the sup(238)U shape isomer was reinvestigated using the sup(238)U(d,pn) sup(238)Usup(m) reaction with a

new two-detector technique. A line at 2512,7(5) and another possible one at 1877.6 keV are attributed to the isomer. The cross section for production of the 2512.7 keV γ ray by 18 MeV deuteron bombardment of sup(238)U is 42(12) μb, consistent with the authors' earlier conversion-electron work on sup(238)Usup(m).

45680 (GANIL-P—84-07) Nuclear dynamics in phase space. Di Toro, M. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)). Jul 1984. 45p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751164.

We present a unified semiclassical picture of nuclear dynamics, from collective states to heavy ion physics, based on a study of the time evolution of the Wigner distribution function. We discuss in particular the mean field dynamics, in this "quantal" phase space, which is ruled by the nuclear Vlasov equation. Simple approximate solutions are worked out for rotational and vibrational collective motions. Giant resonances are shown to be quite well described as scaling modes, which are equivalent to a lowest multipole (up to lsub(max)=2) distortions of the momentum distribution. Applications are shown to heavy ion physics to study giant resonances on high spin states and dynamical collective effects in subthreshold π-production. Several possible extensions and in particular the inclusion of two-body collision terms are finally discussed.

45681 (GSI—85-4-Prepr.) Composite particles and entropy production in relativistic nuclear collisions. Doss, K.G.R.; Poskanzer, A.M.; Renner, T.; Riedesel, H.; Ludewigt, B.; Gustafsson, H.A.; Gutbrod, H.H.; Kolb, B.; Loehner, H.; Ritter, H.G. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jan 1985. Contract AC03-76SF00098. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751893.

The particle production (p,d,t,^{3}He,^{4}He) was studied for 400 and 650 MeV/nucleon Nb + Nb and 400 and 1050 MeV/nucleon Ca + Ca. The chemical freeze out density of the participants and the entropy produced were deduced for each system. The chemical freeze out densities vary between 50 and 100% of normal nuclear density. The entropy production extrapolated for infinite nuclear matter is independent of target-projectile combination at 400 MeV/nucleon and changes little with increasing bombarding energy, but the absolute values are strongly model dependent. The low entropy, when compared to fireball calculations, indicate strongly that compression is present in the collisions. Therefore entropy values in principle can help in the determination of the equation of state for nuclear matter.

45682 (GSI—85-5-Prepr.) Subthreshold pion production in nucleus-nucleus collisions what is the mechanism. Shyam, R.; Knoll, J. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jan 1985. 16p. (CONF-841259—5). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751889.

From International conference on nuclear physics; Bombay, India (27 Dec 1984).

Various reaction mechanisms proposed to explain the pion production at 'subthreshold' energies (below 290 MeV/A) are examined. They range from the nucleon-nucleon single collision mechanism to a co-operative multi-nucleon process. With a shell model prescription for the initial state energies the single collision picture can not explain the data. The participation of many nucleons in the pion production process appears to be necessary. We present a statistical model where the co-operative action of several of the target and projectile nucleons in the pion production process is invoked. We also consider the formation of the fragments in the final channel alongside the produced pion. Calculations performed within the model provide a good overall description of the experimental data over a wide range of beam energies and masses of the participating nuclei. Fragment formation in the final channel is seen to be vital to understand the experimental data within our model.

45683 (GSI—85-6-Prepr.) Isopin effects in pionic bremsstrahlung emitted from tin-isotopes. Uhlig, M.; Vasak, D. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jan 1985. 24p. (CONF-850141—5). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751890.

From 13. international workshop on gross properties of nuclei and nuclear excitations; Hirschegg, Austria (14 Jan 1985).

In heavy ion collisions one observes the production of pions far below the free nucleon-nucleon threshold. One model to explain that cooperative production mechanism is the bremsstrahlung model. In the context of that model we discuss whether the pion yield will significantly be influenced if one changes from tin targets with small neutron numbers to neutron rich tin targets. Based on our model of statistical isospin fluctuations we find out that - depending on geometrical assumptions - the effect can provide a significant enhancement of the pion yield up to 50%.

45684 (GSI—85-7-Prepr., pp 1-11) Unified model for dissipative heavy-ion collisions. Feldmeier, H. Feb 1985. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751912.

In Unified model for dissipative heavy-ion collisions. On the dynamics of the mass asymmetry.

The model which is outlined in the following is intended to describe collisions between nuclei whose relative velocity is much smaller than the Fermi velocity. Nuclear matter then is assumed to behave not much differently from ordinary nuclei, which means that the colliding system still forms a leptodermous object of uniform density distribution in the interior. Therefore, the macroscopic appearance of the nuclear system is characterized by a family of shapes with sharp surfaces, which are restricted to axial symmetry. The volume conserving shapes are uniquely determined by three macroscopic degrees of freedom which are a measure of the distance between the nuclei, of the neck and deformation, and of the mass asymmetry. In addition there are three rotational degrees of freedom for the intrinsic and relative rotation of the di-nuclear complex.

45685 (GSI—85-7-Prepr., pp 12-17) Dynamics of the mass asymmetry. Feldmeier, H. Feb 1985. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751912.

In Unified model for dissipative heavy-ion collisions. On the dynamics of the mass asymmetry.

In order to study the dynamics of the rearrangement in the mass number of two colliding nuclei we have performed trajectory calculations. The model uses a family of nuclear shapes which consists of two spheres joined smoothyl by a hyperboloid. For these shapes we calculated a mass tensor, a potential energy, and a friction tensor. The macroscopic variables are the relative distance, neck and deformation, mass asymmetry, and three angles of rotation.

45686 (GSI—85-7-Prepr.) Unified model for dissipative heavy-ion collisions. On the dynamics of the mass asymmetry. Feldmeier, H. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Feb 1985. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751912.

This report contains two articles concerning a unified model for dissipative heavy ion collisions, and the dynamics of the mass asymmetry. See hints under the relevant topics.

45687 (GSI—85-9-Prepr.) Theory of and effects from elastoplasticity in nucleus-nucleus collisions. Noerenberg, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Feb 1985. 17p. (CONF-8408139—3). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751892.

From INS-RIKEN international symposium on heavy ion physics; Tokyo, Japan (24 Aug 1984).

Elastoplasticity of finite Fermi systems results from a coherent coupling between collective and intrinsic degrees of freedom and subsequent equilibration essentially due to two-body collisions. Within a non-markovian transport-theoretical approach referred to

as dissipative diabatic dynamics (DDD), elastoplastical forms the link between giant vibrations and overdamped motion of nuclear. Obersvable effects resulting from this non-markovian behaviour in nucleus-nucleus collisions are discussed.

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

Model calculations can be used to provide nuclear data for applications. Computer codes for the calculation of average cross sections are reviewed. The codes are discussed together with the models - the spherical and deformed optical model, the statistical compound nucleus model and phenomenological precompound models - and the required parameters.

45690 (IAEA-SMR—93, pp 27-37) **Application of nuclear model computer codes to nuclear data calculations.** Strohmaier, B. (Vienna Univ. (Austria). Inst. fuer Radiumforschung und Kernphysik). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

This paper has been prepared in close correlation with the preceding one (M. Uhl: Recent advances in nuclear model computer code developments) and is intended to describe more practical aspects of nuclear model calculations, namely the dependence of their results on the choice of the input parameters as well as on the way of treating certain physical aspects. The topics are restricted mostly to the precompound and compound model description of nucleon or light complex particle induced reactions at incident energies of a few to tens of MeV. The work is based on recent publications in the field and, as far as existing, own experience. In particular, it treats attempts of including angular momentum conservation to preequilibrium calculations and describes various models for calculating preequilibrium angular distributions. The influence of optical potentials and of level densities on statistical model calculations is discussed. Further, the applicability of approximations, particularly in connection with width fluctuation and angular momentum conservation, is investigated. Finally, some more general examples of neutron nuclear data evaluation are presented.

45691 (IAEA-SMR—93, pp 39-55) **Critical review of precompound models.** Jahn, H. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

It is shown that the desired predictive capability of much of the commonly used precompound formalism to calculate nuclear reaction cross-sections is seriously reduced by too much arbitrariness of the choice of parameters. The origin of this arbitrariness is analysed in detail and improvements or alternatives are discussed.

45692 (IAEA-SMR—93, pp 67-113) **Dynamical theories of nuclear fission, viscosity and dissipative effects.** Jensen, A.S.; Miranda, A. (Aarhus Univ. (Denmark). Inst. of Physics). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

A number of dynamical theories of nuclear fission are described. Their state of development, scope and complexity are very different. Special attention is devoted to viscosity and dissipation. One of the theories, the collective transport theory for nuclei also called the linear response theory, is of special interest. It is a general theory containing all necessary ingredients and the numerical results compare favorably with available experimental data.

In this thesis the rates for β-delayed neutron emission and fission are calculated by using the beta strength functions between stability value and neutron drip line determined earlier in connection with the calculation of the β^- halflives. The results are applied for the calculation of the after-heat coming forward after shut down of reactors. In order to determine the isotope quantities in the reactor core as function of the reactor operation time the computer code THOR-1 was developed. By this time-dependent calculations of the β- and γ-afterheat after a reactor shut down and electron and antineutrino spectra in the reactor core are performed. Radiative corrections were regarded. The afterheat functions are in excellent agreement with measurements for the thermal fission of ^{239}U and sup(239,241)Pu. It is expected that also the after-heat of further fissile materials can be reliably predicted. By this a great advance for the design of emergency cooling systems for light water reactors is reached. The calculated electron and antineutrino spectra fullfil for the first time the required accuracy for the analysis of reactor-neutrino oscillation experiments and will be especially of importance for the current experiments on power reactors. It has to be stressed, that it has succeeded for the first time to describe consistently by a unified description of the beta decay the after-heat of reactors, electron and antineutrinos as well as halflives. As astrophysical application the response probability for the Ga-detector discussed for detection of galactic neutrinos is calculated.

Summary of a doctorate thesis.

New theoretical results obtained in the frame of coherent states model are presented, proving model power in describing unitarily the spectroscopic properties of even-even and even-odd nuclei in the rare-earths area both in the vibrational boundary and where the energetic split points out a rotational behaviour. These results are: A. The study of high state energy: a) analytical forms for excitation energies within the ground band and for three bands interacting at strong deformations are obtained; b) quadrupolar degrees of freedom couplings with other degrees of freedom have been studied. For example: particle type degrees of freedom (for which analytical formulae are obtained for decoupled band energies using only the ground band states for the core space; the odd nucleon also couples the β band by means of ground band for the stable β even-odd nuclei; the nucleon is coupled to the joint movement of the core described by β and γ ground bands for instable γ nuclei), octopolar degrees of freedom. We have elaborated a model to describe O^- and 1^- negative polarity bands. For all the cases mentioned above, electromagnetic transition probabilities are studied. B. For each case, the formalism is also applied by extensive numerical applications revealing a very good agreement with the experimental data.

45703 (INIS-mf—9707) **Theory of nuclear reactions, with applications to heavy ion scattering reactions.** Youssef, M.S.A. (Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)). 1981. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701820.

Summary of a doctorate thesis.

Nuclear science to day, has gained its stature through the pioneer work of both theorists and experimentalists within its two main divisions, Nuclear Reaction and Nuclear Structure theories. Our main interest in this theoretical work in nuclear reaction theory is focused on three topics, come under the headings of three parts which are the constituents of the present paper. Part 1 is concerned with "Contributions to the theory of Threshold phenomena in nuclear reactions; cluster threshold states in heavy ion reactions". Part II is devoted to "Hermiticity of the Laplacian operator, R-matrix theories and direct interaction theory", while part xII is ascribed to "Heavy ion transfer reactions and scattering". The aforementioned selected topics are the backbones of this thesis, which starts with general introduction giving a brief account about the material included in. In each part, investigations are given in an extended manner through several chapters. Finally, the thesis is ended eith the chapter on "General Discussions and Conclusions". Appendices, references, and figure captions are found at the end of each part, the matter which we believe to facilitate much the reading through of the thesis. The first two parts are based (to some extent) on the same formal background (R-matrix, Kapur-Peierls-theories) and they converge to solve some physical problems originating from flux conservation laws in nuclear reactions, while the third part is indirect related to the first two; in principle it joins the other two parts under computational aspects. All of them after all, form the solidarity of the material included in the thesis.

45704 (IPNO-TH—83-32) **Influence of left right asymmetry degrees of freedom in self-consistent calculation of ^{20}Ne.** Marcos, S.; Flocard, H.; Heenen, P.H. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Jun 1983. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751161.

Within a constrained Hartree-Fock calculation we investigate the effects of left right asymmetric degrees of freedom associated with the channel ^{16}O + ^{4}He <-> ^{20}Ne. We find a large softness of ^{20}Ne against octupole deformation. The optimal solution after restoration of the parity by means of a projection shows a pronounced ^{16}O + ^{4}He clustering. A generator coordinate calculation along the collective path confirms this conclusion. Once center of mass motion effects are taken into account a good agreement with experiment is found.

45705 (ISN—83-02) **Semiclassical description of rotating nuclei.** Durand, M.; Kunz, J.; Schuck, P. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires). Jan 1983. 33p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751211.

The technique of partial h-resummation is used to obtain semiclassical, i.e. average current distributions in the body fixed system of heavy nuclei. It thereby turns out that this average intrinsic current only flows in the nuclear surface. A Strutinsky smoothing of the current is also performed and gives nice agreement with the semiclassical results. We also show how one can incorporate superfluidity into the semiclassical treatment. To lowest order in h we find that the moment of inertia of superfluid nuclei is zero. The same result is obtained by a quantum mechanical calculation if the gap goes to infinity. The importance of including n-corrections is pointed out.

45706 **(ITF—84-64-R) Generating matrix elements of the potential energy operator of light and intermediate mass nuclei on the basic function of the SU(3) model.** Tereshin, Yu.V.; Filippov, G.F. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1984. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701813.

The effective Hamiltonian for the s-d-shell nuclei is constructed within the SU(3) model with real nucleon-nucleon interaction. This Hamiltonian is defined in the space, where the wave function is mapped in SU(3) tensor, formed of two mutually orthogonal three-dimensional vectors.

45707 **(JINR—E-4-84-487) Intensified and asymmetric barrier penetration of nuclear slabs in time-dependent Hartree-Fock approximation.** Maedler, P.; Nikishov, P.Yu.; Zakhar'ev, B.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701827.

The effects of intensified and asymmetric barrier penetration by complex particles exhibiting intrinsic structure are investigated in the framework of the time-dependent mean-field theory using an effective one-dimensional layer geometry and a simplified Skyrme nucleon-nucleon effective interaction. The transmission coefficient D(E) has been investigated as a function of incident energy E anU layer thickness. The appearance of discontinuities in D(E) is discussed in detail. It is argued that quantum corrections to the standard TDHF picture as well as the transition to three dimensions possibly smearing out the discontinuities should not alter the qualitative results. In nearly all considered cases the penetrability is really substantially intensified and the asymmetry effect manifests itself as predicted earlier using a simple quasideuteron model.

45708 **(JINR—E-7-84-415) TDHF-motivated macroscopic model for heavy ion collisions: a comparative study.** Biedermann, M.; Reif, R.; Maedler, P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701829.

A detailed investigation of Bertshc's classical TDHF-motivated model for the description of heavy ion collisions is performed. The model agrees well with TDHF and phenomenological models which include deformation degrees of freedom as well as with experimental data. Some quantitative deviations from experiment and/or TDHF can be removed to a large extent if the standard model parameters are considered as adjustable parameters in physically reasonable regions of variation.

45709 **(LA—10438-C) LAMPF workshop on Dirac approaches to nuclear physics: proceedings.** Shepard, J.R.; Cheung, C.Y.; Boudrie, R.L. (eds.). (Los Alamos National Lab., NM (USA)). May 1985. Contract W-7405-ENG-36. 412p. (CONF-850163—). NTIS, PC A18/MF A01; 1; GPO Dep. File Number DE85016203.

From Workshop on Dirac approaches to nuclear physics; Los Alamos, NM, USA (31 Jan 1985).

Separate abstracts were prepared for 20 papers in this proceedings. Two other papers were previously abstracted for EDB. (LEW)

45710 **(LYCEN—8364) Charged pion electroproduction and spin-isospin modes in nuclei.** Chanfray, G. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire). Dec 1983. 37p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85752036.

We study photopionic nuclear processes in the quasielastic region. We show how charged pion electroproduction allows the simultaneous access to the transverse and longitudinal spin-isospin responses. Gauge invariance requirements are taken into account in a coherent way with the various medium effects.

45711 **(LYCEN—8403) High energy spin isospin modes in nuclei.** Chanfray, G.; Ericson, M. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire). Jan 1984. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752035.

The high energy response of nuclei to a spin-isospin excitation is investigated. We show the existence of a strong contrast between the spin transverse and spin longitudinal responses. The second one undergoes a shadow effect in the Δ region and displays the occurrence of the pionic branch.

45712 **(PB—85-186484/XAB) Angular correlations in heavy-ion reactions.** Marsh, S.; Rae, W.D.M. (Oxford Univ. (UK). Nuclear Physics Lab.). 1984. 15p. NTIS, PC E03/MF E03.

Properties of the in-plane correlation between the initial scattering angle and the angle at which subsequent particle decay occurs, following a forward angle heavy-ion reaction are examined. The results are obtained in the strong absorption limit. In particular, the authors explain the recent experimental observation that there is a systematic dependence of the correlation distributions on the initial scattering angle of the excited nucleus. They generalize this result to the case of nuclei with non-zero spins in the decay channel, and also obtain closed-form expressions for the correlation function under general matching conditions.

45713 **Correlations between preequilibrium nucleons.** Ernst, D.J.; Strayer, M.R.; Umar, A.S. (Physics Department, Texas A & M University, College Station, Texas 77843). *Physical Review Letters;* **55**: No. 6, 584-587(5 Aug 1985). Contract AC02-76ER03074.

A quantum-mechanical model for the emission of fast nucleons in low-energy nucleus collisions is presented. The role of a classical emission function is shown to be played by the time derivative of an impact-parameter—integrated, time-dependent, distorted-wave Wigner function. Correlations between the emitted particles are shown to be caused by the Pauli principle, by the impact-parameter dependence of the emission process, and by two-body collisions including the final-state interactions, as well as those due to the size of the emitting source.

45714 **Experimental physics of dynamical supersymmetry in nuclei.** Casten, R.F. (Brookhaven National Lab., Upton, NY (USA)). *Physica D: Nonlinear Phenomena (Amsterdam);* **15**: No. 1/2, 99-111(Jan 1985).

Supersymmetry ideas for nuclei are outlined in the context of traditional models. Following this, a detailed discussion of the structure of two types of nuclear supersymmetry schemes, based on the U(6/4) and U(6/12) supergroups, is given along with an explanation of the appropriate empirical probes for testing each scheme. The experimental evidence for supersymmetry in nuclei is presented with emphasis on areas of both agreement and disagreement and with a discussion of alternate schemes that can reduce the latter.

45715 **Spin-orbit interaction in strongly deformed nuclides.** Chasman, R.R.; Wilkins, B.D. (Argonne National Lab., IL (USA). Chemistry Div.). *Physics Letters, [Section] B;* **149**: No. 6, 433-435(27 Dec 1984).

Mass yields observed in asymmetric fission are used to constrain the parameterization of the spin-orbit term of the neutron single particle potential at large deformations.

45716 **High nuclear temperatures by antimatter-matter annihilation.** Strottman, D.; Gibbs, W.R. (Los Alamos National Lab., NM (USA). Theoretical Div.). *Physics Letters, [Section] B;* **149**: No. 4/5, 288-292(20 Dec 1984).

Using two rather different approaches the temperature of nuclear matter has been calculated as a function of the momentum of incident antiprotons and antideuterons. The results of this study show that a high temperature can be achieved by raising the beam momentum above 2 GeV/c. For incident momentum of the order of 6 GeV/c, temperatures of the magnitude necessary to study the possible quark-gluon plasma phase transition are reached.

45717 (AECL—7988) Thermal neutron source study. Holden, T.M. (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). May 1983. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701933.

The value of intense neutron beams for condensed matter research is discussed with emphasis on the complementary nature of steady state and pulsed neutron sources. A large body of information on neutron sources, both existing and planned, is then summarized under four major headings: fission reactors, electron accelerators with heavy metal targets, pulsed spallation sources and 'steady state' spallation sources. Although the cost of a spallation source is expected to exceed that of a fission reactor of the same flux by a factor of two, there are significant advantages for a spallation device such as the proposed Electronuclear Materials Test Facility (EMTF).

45718 (AECL—8176) Absorption factor tables for x-ray and neutron scattering in cylindrical samples. Sears, V.F. (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). Oct 1983. 33p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701934.

This report contains a more accurate and extensive tabulation of absorption factors for the scattering of X-rays or neutrons in cylindrical samples than has previously been published. In particular, we include for the first time values for use in the analysis of neutron inelastic scattering experiments where the absorption coefficients for the incident and scattered neutrons are not equal. A detailed account of the calculations, together with the development of a useful asymptotic expression for the absorption factor, will be published elsewhere.

45719 (CEA-CONF—7223) Radiative transfer equation accretiveness. Mercier, B. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Feb 1983. 43p. (In French). (CONF-8402150—1). NTIS (US Sales Only), PC A03/MF A01. File Number DE85751185.

From Ecole Normale Superieure seminar on MA; Paris, France (29 Feb 1984).

Equations of radiative transfer in fixed matter are shown to verify, under hypothesis frequently verified in applications, accretiveness properties and maximum principle. A criterium of time step for the standard explicit scheme, then for an algorithm derived from Fleck and Cummings.

This work is mainly devoted to Csub(N) and Fsub(N) methods. CN method: starting from a lemma stated by Placzek, an equivalence is established between two problems: the first one is defined in a finite medium bounded by a surface S, the second one is defined in the whole space. In the first problem the angular flux on the surface S is shown to be the solution of an integral equation. This equation is solved by Galerkin's method. The Csub(N) method is applied here to one-velocity problems: in plane geometry, slab albedo and transmission with Rayleigh scattering, calculation of the extrapolation length; in cylindrical geometry, albedo and extrapolation length calculation with linear scattering. Fsub(N) method: the basic integral transport equation of the Csub(N) method is integrated on Case's elementary distributions; another integral transport equation is obtained: this equation is solved by a collocation method. The plane problems solved by the Csub(N) method are also solved by the Fsub(N) method. The Fsub(N) method is extended to any polynomial scattering law. Some simple spherical problems are also studied. Chandrasekhar's method, collision probability method, Case's method are presented for comparison with Csub(N) and Fsub(N) methods. This comparison shows the respective advantages of the two methods: a) fast convergence and possible extension to various geometries for Csub(N) method; b) easy calculations and easy extension to polynomial scattering for Fsub(N) method.

45722 (CEA-N—2410) Some modelisation aspects of the instrumental transformation of neutron kinetic energy into electrical impulse amplitude. Becker, A.; Lame, J. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Sep 1984. 69p. (In French). NTIS (US Sales Only), PC A04/MF A01. File Number DE85751216.

The differential energy characterisation of neutron emission or fluxes may be called difficult especially when an approach to metrological standards is required. The use of somewhat complex computing programmes is unavoidable here since the process of selective detection and interpretation of measurement results involves: - Firstly of need to simulate by so-called MONTE CARLO techniques the responses of the various kinds of detector used (the detector responses are so dependent on changes in the environment that experimental calibration -too expensive to be easily repeated from one situation to the next- cannot be recommended); - secondly the need to answer pratically (in a discretized situation by matrix manipulations) to the problem, theoretically without a unique analytical solution, of resolving a Fredholm equation of the first kind. For the understanding, use and as necessary modification of the appropriate codes it is most important to have a very precise conceptual view of the mechanisms involved (in the sequence of direct instrumental transformations). For didactic purposes the present article attempts in a very simple case to give an idea, at increasing levels of complexity: stylisation, schematisation, modelisation, simulation, of the successive stage (neutron-proton energy transfer, analog conversion of ionising particle energy into electric impulse signal size) involved in the formation and understanding of an energy spectrum of recoil nuclei. All these instrumental distortions are made explicit in a kind of underlying two-dimensional "density"; in its discretized form this is called the instrumental transfer matrix and its understanding and treatment are the "keys" to the deconvolution of the recorded spectrum, giving access to the differental distribution of the emitted neutron energies.

45723 (CONF-8409264—1) Intense e-beam interaction with matter. Ritchie, R.H.; Crawford, O.H. (Oak Ridge National Lab., TN (USA)). 1984. Contract AC05-84OR21400. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85017093.

From Navy CPB material interaction workshop; Silver Spring, MD, USA (24 Sep 1984).

This document describes work done in this period on certain nonlinear processes of potential importance at high energy densities in condensed matter, and on the theory of the electron slowing-down-cascade spectrum engendered in solids by e-beams.

45724 (CTA-IEAV-NT—03/84) Benchmarks with diffusion theory and transport theory. Cunha Menezes Filho, A. da; Souza, A.L. de. (Centro Tecnico Aeroespacial, Sao Jose dos Campos (Brazil). The multiplication factor and some spectral indices for five critical assemblies (ZPR-6-7, ZPR-3-11, GODIVA, BIG-TEN and FLATTOP) are calculated by Diffusion and Transport Theory, with group constants generated by MC^2 (for diffusion calculations) and by NJOY (for transport calculations). The discrepancies encountered in the ZPR-6-7 spectra, can be tracked to the large differences in the elastic cross section for Iron, calculated by MC^2 and NJOY.

45725 **(KFK—3812) Interactive FORTRAN program for the evaluation of structure factors and pair distribution functions from neutron diffraction experiments.** Abel, W. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Nukleare Festkoerperphysik). Feb 1985. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85752101.

IBM/3033.

This report describes an interactive program to evaluate neutron diffraction data using the Graphic System (GS) under MVS (TSO). Different evaluation steps may be directed by a CLIST. The present program is limited to cylindrical sample geometry. From the fully corrected static structure factor the pair correlation function g(r) and the radial density function may be calculated from which the mean coordination number can be obtained by numerical integration over the main peak. Producing a hardcopy output on a mechanical plotter is provided.

45726 (LA—10227-C-Vol.2, pp 384-400) **Neutron inelastic scattering from mixed valence materials.** Murani, A.P. (Institut Laue-Langevin, Grenoble, France). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Paramagnetic scattering from mixed valence materials is reviewed. Some of the early measurements identified a broad quasielastic spectral distribution (e.g. a Lorentzian centered on zero energy with large, practically Q-independent widths (half-width ~5-30 MeV) which remain finite as T → OK. More recent measurements using high energy neutrons on several mixed valance systems reveal inelastic peaks superposed on the broad quasielastic spectrum at low temperatures. These inelastic peaks progressively melt away with increasing temperature, accompanied possibly by some softening, and disappear almost completely around the temperature of the maximum in the susceptibility. Several possible mechanisms could semi-qualitatively account for the observed spectral response, a deeper insight into whose origin would aid in understanding the mixed valence phenomena.

45727 (LA—10227-C-Vol.2, pp 401-414) **Theoretical study of neutron scattering cross sections in semiconductors.** Cooke, J.F.; Blackman, J.A.; Morgan, T. (Oak Ridge National Lab., TN). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2). Contract W-7405-ENG-26.

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

The development of high-flux high-energy pulsed-neutron sources makes it possible to study electronic transitions in solids which are in the electron volt range. A theoretical study has been carried out to determine the feasibility of using such sources to obtain information about the band structure of semiconductors. Calculations of the inelastic neutron scattering cross sections for germanium and silicon based on an empirical pseudopotential description of the energy bands have been completed. No significant structure associated with the band gap was found in the calculational results. The calculated cross sections also were found to be quite small for realistic experimental conditions. Measurement of these relatively small cross sections could, however, provide important information about the band structure of semiconductors which cannot be obtained from most other experimental techniques.

45728 (LA—10227-C-Vol.2, pp 416-429) **Momentum distributions.** Simmons, R.O. (Univ. of Illinois, Urbana). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2). Contract AC02-76ER01198;W-31-109-ENG-38.

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

The content of the portion of the workshop concerned with momentum distributions in condensed matter is outlined and the neutron scattering approach to their measurement is briefly described. Results concerning helium systems are reviewed. Some theoretical aspects are briefly mentioned.

45729 (LA—10227-C-Vol.2, pp 493-511) **Measurement of momentum distributions in solids using deep inelastic neutron scattering.** Reiter, G. (Univ. of Houston, TX). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

The impulse approximation limit is shown to be well obtained for scattering from solids at energies presently available in pulsed neutron sources, and some results on the effect of hard cores in the approach to the impulse approximation in the fluid are presented. A method of inverting the Radon transform that relates S(q,omega) to the momentum distribution in this limit is given that is well suited to the physical situation in solids. When the scattering is from light ions in a heavy lattice, it is possible to obtain a direct measurement of the potential surface of the light ion.

45730 (LA—10227-C-Vol.2, pp 512-538) **Momentum distribution of light atoms by deep inelastic neutron scattering.** Taylor, A.D. (Rutherford Appleton Lab., Chilton, England). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

The development of deep inelastic neutron scattering, where neutrons of one eV or more are used to achieve momentum transfers in the impulse limit, is outlined. Scattering data from light atoms at high momentum transfers are presented and the results discussed.

45731 (LA—10227-C-Vol.2, pp 540-547) **High energy phonons: overview.** Eckert, J. (Los Alamos National Lab., NM). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Neutron scattering has been important in the measurement and interpretation of phonon dispersion relations. As these measurements are extended to higher energies they may yield new types of information or information about different types of systems. Several examples are discussed including: dispersion in high frequency internal modes, application to molecular crystals and the use of vibrational modes of hydrogen as a structural probe.

45732 (LA—10227-C-Vol.2, pp 611-625) **Scattering of electron-volt neutrons by light and heavy water.** Soper, A.K.; Taylor, A.D. (Univ. of Guelph, Ontario). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

In a recent experiment to determine the structure of liquid water the time-of-flight neutron diffraction cross sections for light and heavy water were measured at neutron energies up to 100eV, and at three scattering angles, i.e. 40°, 90° and 150°. At energies below 1 eV the curves for heavy water show the usual series of interference oscillations arising from inter-atomic correlations. The same oscillations are not apparent in light water because of the large proton incoherent cross section for neutrons. Plotted versus energy data reveal other features which have not been reported before. In particular for neutron energies in the range 0.2-1.0 eV the cross sections show a distinct bulge, particularly at the larger scattering angles. The neutron energy for the onset of this feature is the same at all angles, although the size of the bulge is angle dependent. There is a similar feature in the neutron energy region of 1-~50 eV. Subsequently the data fall with increasing energy. Although the behavior of the cross sections with neutron energy is not fully understood at present, detailed computer simulations with a simple harmonic oscillator model scattering law indicate that the bulge starting at ~0.2eV is caused in part by the onset of vibrational excitation of the molecule - a consequence of the complicated kinematic relationships involved in a time-of-flight experiment.

45733 (LA—10227-C-Vol.2, pp 626-645) **Neutron scattering, electronic excitations and chemical reactions.** Egelstaff, P.A. (Univ. of Guelph, Ontario). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Recent experiments have suggested that the scattering of neutrons in the 1-10 eV range by heavy water yield data which are anomalous relative to theoretical results based on the short collision time approximation for free, harmonically vibrating molecules. It is pointed out here that these data may be explained if the spectral density function has about 10% of its area in 1-2 eV range. This observation suggests that these data are sensitive to electronic excitations and/or chemical reactions in liquid water, which are promoted by the neutron scattering event and therefore may be studied through detailed S(q,omega) measurements.

45734 (LA—10227-C-Vol.2, pp 648-651) **Notes from impressions talk given at closing session of high energy excitations in condensed matter workshop.** Elliott, R.J. (Univ. of Oxford, England). Dec 1984. NTIS, PC A15/MF A01. File Number DE85007395. (CONF-840264—Vol.2).

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Important applications of neutron scattering which were discussed at the workshop are summarized. These include: atomic structures, atomic motions and electronic motions. A brief comparison to results of photon processes is given.

45735 **(PB—85-186096/XAB) Numerical solution of field theories using random walks.** Barnes, T.; Daniell, G.J. (Rutherford Appleton Lab., Chilton (UK); Southampton Univ. (UK)). [1985]. 27p. (RAL—84-106). NTIS, PC E04/MF E04.

Prepared in cooperation with Southampton Univ., England.

It is shown how random walks in function space can be employed to evaluate field theoretic vacuum expectation values numerically. Specific applications which are studied are the two-point function, mass gap, magnetization (phi0 and classical solutions). This technique offers the promise of faster calculations using less computer memory than current methods.

45736 **(CEA-R—5271) Analysis of β, X, and γ emitting nuclides in radioactive mixtures; results of interlaboratory tests R15, R16, R17 and R18.** Morel, J.; Dalmazzone, J.; Chauvenet, B.; Thomas, C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Aug 1984. 72p. (In French). NTIS (US Sales Only), PC A04/MF A01. File Number DE85751217.

Every year, the "Laboratoire de Metrologie des Rayonnements Ionisants" organises several interlaboratory tests to ensure the cohesion of radiation measurements at a national level. In 1982, four radioanalysis tests were proposed. Two of them dealt with the identification and dosage in activity per gram of β and γ emitters in complex mixtures, the third one with the measurements of photon emission fluxes per gram of the main γ-rays emitted by a europium 152 solution, the last one with the measurement of the emission fluxes per gram of the X and low-energy γ-rays of a mixed solution and the dosage of the corresponding radionuclides. The rather high participation in these tests shows they are of prime interest for measurement laboratories. This document is the synthesis of the results received. It begins with a short description of samples, measuring devices, measuring conditions and data-processing methods.

45737 **(CEA-R—5276) Quick evaluation of the neutron dose following a criticality accident by measurement of sodium 24 activity.** Tabardel, R.; Ricourt, A.; Parmentier, N. (CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France)). Jul 1984. 36p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE85751198.

In order to quickly sort out the irradiated individuals following a criticality accident, the neutron dose can be evaluated quickly by measuring the sodium-24 activity induced in the human body. The report supplies the information necessary for this evaluation from the response of various detectors of current use in radiation protection. The first part describes the method of evaluation of sodium-24 activity (A) given by the reading (M) of each instrument. The second part describes the method of kerma evaluation from the measured sodium-24 activity. The third part is an experimental application of the method of kerma evaluation from the sodium-24 activity measured in a phantom irradiated in the SILENE reactor flux. The results given by radiation protection instruments are in good agreement with the calculated values for a front exposure and demonstrate the usefulness of measuring the induced sodium-24 activity by radiation protection instruments of current use.

45738 **(FRNC-TH—1899) Analysis and development of methods of correcting for heterogeneities to cobalt-60: computing application.** Kappas, K. (Toulouse-3 Univ., 31 (France)). Nov 1982. 199p. (In French). NTIS (US Sales Only), PC A09/MF A01. File Number DE85751173.

The purpose of this work is the analysis of the influence of inhomogeneities of the human body on the determination of the dose in Cobalt-60 radiation therapy. The first part is dedicated to the physical characteristics of inhomogeneities and to the conventional methods of correction. New methods of correction are proposed based on the analysis of the scatter. This analysis allows to take account, with a greater accuracy of their physical characteristics and of the corresponding modifications of the dose: "the differential TAR method" and "the Beam Substraction Method". The second part is dedicated to the computer implementation of the second method of correction for routine application in hospital.

45739 **(FS—83-31-AKA) Hints concerning the instruction of personnel in accordance with section 39 of the Radiation Protection Ordinance.** (Fachverband fuer Strahlenschutz e.V., Karlsruhe (Germany, F.R.)). Feb 1983. 13p. (In German). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751869.

According to the Radiation Protection Ordinance, expert knowledge is demanded only for the person in charge of and responsible for radiation protection. Instructions of the personnel are therefore of special importance in this regard. Apart from legal aspects, the personnel is to be instructed on working techniques, possible hazards, exceptional radiation exposures, and safety and protection measures to be applied. The group of persons to be instructed comprises persons occupationally exposed to radiation.

45740 **(INFO—0101) Practical reference - radiation standards in Canada.** (Atomic Energy Control Board, Ottawa, Ontario (Canada)). Jul 1983. 72p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701971.

In developing a policy that will require licensees to calibrate their radiation dose measuring devices and trace such calibrations to approved reference standards, the AECB has consulted recognized experts. This document presents the experts' reports and recommendations which will be considered in finalizing the policy.

45741 **(PTB-FMRB—101) Dosimetric quantities in the ICRU sphere for neutron irradiation with energies between thermal and 20 MeV.** Hollnagel, R.; Jahr, R.; Siebert, B.R.L. (Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.). Forschungs- und Messreaktor). Feb 1985. 98p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85752126.

The doses and dose equivalents produced in the ICRU sphere by broad unidirectional and monoenergetic neutron beams of energies between thermal and 20 MeV are calculated. The program employed makes use of the Monte Carlo method. In particular, the results for proposed operational radiation protection quantities (RPQ), i.e. specified-depth dose equivalent and ambient dose equivalent, are given. Quality factors, including those with and without induced photons, were derived for the proposed RPQ. Angular distribution factors for the irradiation of the ICRU sphere by

beams other than a broad unidirectional beam are also presented. In Appendix A the relation of the proposed RPQ to those hitherto (ICRP 21) used is discussed. The tabulated dose equivalents in several depths of the ICRU sphere may be used as conversion factors in radiation protection when the ICRP 21 values are superseded by the proposed operational quantities.

45742 **(CEA-CONF—7007) Principles of μSR technics.** Chappert, J. (CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France)). May 1983. 25p. (In French). (CONF-8305276—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751149.

From Conference on muon plus spectroscopy; Aussois, France (16 May 1983).

Principles of muon spin rotation spectroscopy (μSR) are presented. Muons plus are only take into account because physical and chemical results obtained presently are obtained by them. Muon plus has two main characteristics when implanted in a sample: just, it can be considered as a interstitial site probe; then the muon plus can diffuse. Accordingly the quantities measured by μSR are a combination of static and dynamic properties of the muon plus and of the sample. A fluid characteristics is the possibility of munomium formation (μ^+e^- bound state).

45743 **(DOE/ER/12061—3) High pressure electron resonance studies of electronic, magnetic, and structural phase transitions. Final technical report, May 1, 1982-April 30, 1984.** Pifer, J.E.; Croft, M.C. (Rutgers--the State Univ., New Brunswick, NJ (USA). Dept. of Physics). Jun 1985. Contract AS05-82ER12061. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016971.

Research reported includes development of a high pressure electron resonance apparatus and a resistivity apparatus, and studies of valence instabilities in crystalline and amorphous materials.

45744 **(DOE/ER/45135—13) Electronic properties of two-dimensional systems in sub-micron devices. Progress report, July 1, 1984-August 31, 1985.** O'Connell, R.F. (Louisiana State Univ., Baton Rouge (USA). Dept. of Physics and Astronomy). 1985. Contract FG05-84ER45135. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016840.

First, we describe our magneto-optical studies (with emphasis on Faraday rotation) of two-dimensional systems. Secondly, we describe work on the Wigner distribution function, which has been concerned both with the fundamentals and with applications to specific problems in two-dimensional systems. Thirdly, a paper in "Nature" with D.F. Walls (from New Zealand) deals with the role of two-particle Wigner distribution functions in measurement processes, our next goal being to include the effects of a heat-bath, a subject of much interest in various facets of condensed-matter research. Fourthly, much time over the last year was spent on exploratory work which deals with the application of the Wigner distribution formalism to the topical problem of the melting of a two-dimensional crystal lattice. Finally, the author decided to look into the merits of carrying out research on magnetic biexcitons. This involved resurrecting old computer programs used for calculations of the hydrogen spectrum in a strong magnetic field.

45745 **(LA-UR—85-2504) Deconvolution analysis to determine relaxation time spectra of internal friction peaks.** Cost, J.R. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 5p. (CONF-8506125—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015702.

From Conference on internal friction and ultrasonic attenuation in solids; Urbana, IL, USA (3 Jun 1985).

A new method for analysis of an internal friction vs temperature peak to obtain an approximation of the spectrum of relaxation time responsible for the peak is described. This method, referred to as direct spectrum analysis (DSA), is shown to provide an accurate estimate of the distribution of relaxation times. The method is validated for various spectra, and it is shown that: (1) It provides approximations to known input spectra which replicate the position, amplitude, width and shape with good accuracy (typically 10%). (2) It does not yield approximations which have false spectral peaks.

45746 **(UCRL—91697) Analysis of dislocation kinetics across shocks.** Stout, R.B. (Lawrence Livermore National Lab., CA (USA)). Jul 1985. Contract W-7405-ENG-48. 22p. (CONF-850770—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE85016444.

From EXPLOMET '85 - international conference on metallurgical applications of shock wave and high strain-rate phenomena; Portland, OR, USA (28 Jul 1985).

The classical continuum analysis for possible propagating spatial discontinuties of mass density, velocity, stress, and energy across a shock front does not explicity consider the possibility of a discontinuity in the dislocation density function. One reason for not previously considering this possibility is that the dislocation density function does not appear explicity in the mathematical representation for deformation in a continuum approach. For purposes of a more physically realistic model, a discontinuum formulation that does represent interatomic discontinuities and does have an explicit dislocation density dependent deformation and thermodynamics has been developed. Based on this formulation, a discontinuum analysis for a discontinuity in the dislocation density function, as well as the mass density, velocity, stress and energy across a shock is described. In the limit of no dislocation kinetics, the discontinuum shock conditions reduce to the continuum shock conditions. A non-equilibrium thermodynamics is formulated that partitions the work rate at the shock front into different energetic components of internal energy. By applying Onsager's methods, a relationship is derived for the propagation velocity of the shock front in terms of the train discontinuity and dislocation kinetics across the shock front. Because of recent experiments that studied the change in dislocation density resulting from strong shocks, it is believed that these discontinuum shock conditions will be useful to interpret, analyze, and design experiments.

45747 **Influence of surfaces on vapor pressures.** Searcy, A.W. (Materials and Molecular Research Division, Lawrence Berkeley Laboratory and Department of Materials Science and Mineral Engineering, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **83**: No. 6, 3095-3098(15 Sep 1985).

An analysis of internal particle equilibrium in J. Chem. Phys. 81, 2489 (1984) is generalized by means of Lagrange's method of undetermined multipliers to show that a one-component crystalline particle of fixed size and shape is at equilibrium at constant temperature and pressure when the chemical potentials of molecular species, μ/sub i/, μ/sub j/, ..., and of vacancies μ/sub v/i, μ/sub v/j, ..., for sites i, j,... of different characteristic bond environments fit the relation μ/sub i/-μ/sub v/i = μ/sub j/-μ/sub v/j = xxx . The chemical potential differences between molecular species and vacancies is shown to be the chemical potential for the component. The influence of surfaces on vapor pressures is predicted by setting the chemical potential of the component in the particle equal to that of its vapor. The predicted effects of surfaces are larger than those of classical theory but are in reasonable agreement with measurements for liquid drops.

45748 **Numerical simulation of quantum spin models.** Kung, D.; Blankenbecler, R.; Sugar, R.L. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review [Section] B: Condensed Matter;* **32**: No. 5, 3058-3066(1 Sep 1985). Contract AC03-76SF00515;AT03-83ER45008.

The general application of the projector Monte Carlo method to spin systems is discussed. The purpose of the paper is to present several variants of the method that improve its accuracy and convergence in specific problems and to give numerical examples of the improvements. More detailed application to specific spin models is left for subsequent publications.

45749 Critical dynamics, Lifshitz tricriticality, and supersymmetry: The Ising model on the hcp lattice. Domany, E.; Gubernatis, J.E. (Department of Electronics, The Weizmann Institute of Science, Rehovot 76100, Israel). *Physical Review [Section] B: Condensed Matter;* **32**: No. 5, 3354-3357(1 Sep 1985).

Critical dynamics in d dimensions can be mapped onto a supersymmetric equilibrium problem in d+1 with a Lifshitz tricritical point. The existence of such a point is demonstrated for the Ising model on the hcp lattice by Monte Carlo simulation.

45750 Role of relaxation in epitaxial growth: A molecular-dynamics study. Schneider, M.; Rahman, A.; Schuller, I.K. (Materials Science and Technology Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review Letters;* **55**: No. 6, 604-606(5 Aug 1985).

The epitaxial growth of a Lennard-Jones system is studied as a function of substrate temperature T/sub s/ and deposition rate. For all substrate temperatures the growth is into well-ordered layers. Layers become fully completed at intermediate T/sub s/. At very low T/sub s/ the layers contain defects and voids; however, the atoms are still arranged in close-packed islands within the layers.

6561 Superconductivity

REFER ALSO TO CITATION(S) 44645, 45389, 45392

45751 p-wave superconductivity in heavy-fermion systems: An induced-interaction approach. Bedell, K.S.; Quader, K.F. (Department of Physics, State University of New York at Stony Brook, Stony Brook, New York 11794). *Physical Review [Section] B: Condensed Matter;* **32**: No. 5, 3296-3299(1 Sep 1985). Contract AC02-76ER13001.

The Fermi-liquid parameters for heavy-fermion systems are calculated. The spin fluctuations (F_0/sup a/) renormalize the effective mass modestly, but significantly affect the triplet scattering amplitude; consequently, p-wave pairing occurs. Additionally in the extreme limit of this model, F_0/sup a/$\rightarrow -0.906$ while the effective mass diverges algebraically, suggesting a Mott-like localization. This is a consequence of the finite range of the effective interactions and many-body correlations.

6570 Theoretical Physics

REFER ALSO TO CITATION(S) 45541, 45568, 45772

45752 (BONN-HE—85-2) W-matrix: A new method for solving the two-body problem. Bartnik, E.A.; Haberzettl, H.; Sandhas, W. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Feb 1985. 40p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85752086.

We present a new momentum space approach to the two-body problem in partial waves. The method allows one to solve both the bound state and the scattering problems in terms of one single inhomogeneous integral equation and thus unifies the descriptions of both energy regimes. This integral equation is real and manifestly non-singular also at scattering energies; for uncoupled partial waves it can even be solved by iteration under only very global constraints on the potential, regardless of the potential strength. Moreover, its solution (called W-matrix) leads to a very simple and practical integral representation of the Jost function in terms of momentum space quantities only. We demonstrate the applicability of our method by calculating bound state and scattering data for the two-nucleon system with the s-wave Malfliet-Tjon III and the $^3S_1$-$^3D_1$ Reid soft-core potentials. We find that both the bound state and the scattering problems can be solved reliably with equal ease by our method.

45753 (CNRS-CPT—84-P-1663) Non-Abelian Bohm-Aharonov effect in geometric quantization. Horvathy, P.A.; Kollar, J. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Sep 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752069.

The non-Abelian Bohm-Aharonov experiment proposed by Wu and Yang is studied in the geometric framework of Kostant and Souriau.

45754 (IC—84/147) Ground state energy of two-dimensional electrons in strong magnetic fields: small clusters in fractional occupation. Lai, Wuyan; Yu, Lu; Su, Zhaobin; Yu, Kun. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1984. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701923.

We diagonalize numerically the Hamiltonian for a two-dimensional system of up to seven electrons interacting via Coulomb force in a strong magnetic field using the symmetric gauge. The effect of positive charge background is taken into account. We find significant downward cusps for certain values of the total angular momentum corresponding to fractional occupation of the lowest Landau level in agreement with the results obtained by using the Landau gauge. This commensurate energy for fractional occupation is interpreted in terms of the "closest configuration" in the space of single particle angular momentum.

45755 (INIS-mf—9489, pp 283-297) Large N expansions work. Mlodinow, L.D. (California Inst. of Tech., Pasadena (USA)). 1981. NTIS (US Sales Only), PC A22/MF A01. File Number DE85781516. (CONF-8105114—).

From 4. Warsaw symposium on elementary particle physics; Kazimierz, Poland (1 May 1981).

The so-called large N expansions for a wide variety of quantum mechanical problems are analyzed and the application of such expansions is described. (I.L.).

45756 (IPNO-TH—84-39) Relativistic quantum mechanics of two interacting spinless particles. Rizov, V.A.; Sazdjian, H.; Todorov, I.T. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). May 1984. 71p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85751192.

The L_2-scalar product $\int PHI^*(x)PSI(x)\,d^3x$ is not appropriate for the space of states describing the center-of-mass relative motion of two relativistic particles whose interaction is given by an energy dependent quasipotential. The problem already appears in the relativistic quantum mechanics of a Klein-Gordon charged particle in an external field. We extend the methods developed for that case to study a two-particle system with an energy independent scalar interaction as well as the relativistic Coulomb problem. We write down a Poincare invariant inner product for which the eigenfunctions corresponding to different energy eigenvalues are orthogonal. We also construct a perturbative expansion for bound-state energy eigenvalues corresponding to an arbitrary energy dependent (quasipotential) correction to an unperturbed Hamiltonian with a known spectrum. The description of observables and transition probabilities for eigenvalue problems with a polynomial dependence on the spectral parameter is also discussed.

45757 (LAPP-TH—108) Missing energy sources at large Psub(T) from standard QCD processes. Aurenche, P.; Kinnunen, R. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). May 1984. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751147.

A detailed analysis is given of processes involving the production of heavy vector bosons as sources of events with a single hadronic jet balanced by a large missing energy or possibly a charged large Psub(T) lepton and missing energy. In particular, the hadronic channels of the tau lepton produced in W^{+-} decays provide an appreciable rate of monojet events, with energetic narrow jets of low charged multiplicity. Furthermore it is shown that higher order QCD corrections to weak boson production, in particular the Compton like process $qg \rightarrow Zq$ or $qg \rightarrow Wq$ are an appreciable source of the types of events mentionned above.

45758 (LAPP-TH—113) Antisymmetric tensor gauge potential in curved superspace and a 16 + 16 supergravity multiplet. Girardi, G.; Grimm, R.; Mueller, M.; Wess, J. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jun 1984. 17p. (KA-THEP—84-6). NTIS (US Sales Only), PC A02/MF A01. File Number DE85751146.

Superspace constraints which reduce the non minimal (20 + 20) supergravity multiplet to a (16 + 16) multiplet are obtained by specifying the superspace geometry of a two form gauge potential. The multiplet, its transformation laws and its invariant action are given. For n = - 1/2 this multiplet describes the truncation of a N=4 extended supergravity with antisymmetric gauge potential.

45759 (LAPP-TH—114) Spin (3/2,1) multiplet and superspace geometry. Gates, S.J.; Grimm, R. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jun 1984. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751148.

We give a completely geometrical derivation of the de Wit-van Holten formulation of a supermultiplet with physical helicity states one and three-halves. We identify all of the components of the multiplet, derive the transformation laws, and construct an invariant action. Like supergravity the action is not expressible only in terms of field strengths.

45760 (LPC—84-24) Classical mechanics and confinement. Benayoun, M.; Leruste, P. (College de France, 75 - Paris. Lab. de Physique Corpusculaire). Oct 1984. 20p. (In French). NTIS (US Sales Only), PC A02/MF A01. File Number DE85752075.

The problem of N Particles interacting through rsup(α) potential is studied. For some range of values of α ($0 < \alpha < 2$) and a convenient choice of coupling between particles (generally a non-factorisable one), minimising the potential energy of the system leads to the clustering in particle - anti particle pairs and particle triplets. This could provide a classical view of the confinement phenomenon.

45761 (PB—85-190791/XAB) Quantum bound states where the classical motion is unbounded. Gunn, J.M.F. (Rutherford Appleton Lab., Chilton (UK)). [1985]. 17p. (RAL—84-104). NTIS, PC E03/MF E03.

An example of bound quantum states occurring where the classical motion is unbounded is given. It consists of a void in an otherwise perfect array of hard-sphere scattering centers. The Hamiltonian consists only of kinetic energy and an interpretation is that the particle is bound in order to lower its kinetic energy is given, contrary to usual intuition. The calculation is also an unusual solid-state physics problem. The physical situations where this may be relevant are mentioned.

45762 (SI—84-8) Asymptotic behavior of massless Feynman integrals in the limit of several large scales. Ohrndorf, T. (Siegen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 7 -Naturwissenschaften 1 (Physik)). Jul 1984. 59p. Fachinformationszentrum Energie, Physik, Mathematik G.m.b.H., Eggenstein-Leopoldshafen, Germany, F.R.

A general method is developed, which permits the calculation of the asymptotic behavior of Feynman integrals in the limit of several large scales. All those contributions, which are power law suppressed are neglected. The parametric representation of Feynman integrals is employed, which is reviewed concisely. Our main tool is the multiple Mellin transform of Feynman integrals with respect to their external momenta. A transformation of the Feynman parameters is represented, which allows the systematic isolation of the leading poles in the multiple Mellin plane.

45763 (UWThPh—84-44) Stochastic quantization and gravity. Rumpf, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1984. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701917.

We give a preliminary account of the application of stochastic quantization to the gravitational field. We start in Section I from Nelson's formulation of quantum mechanics as Newtonian stochastic mechanics and only then introduce the Parisi-Wu stochastic quantization scheme on which all the later discussion will be based. In Section II we present a generalization of the scheme that is applicable to fields in physical (i.e. Lorentzian) space-time and treat the free linearized gravitational field in this manner. The most remarkable result of this is the noncausal propagation of conformal gravitons. Moreover the concept of stochastic gauge-fixing is introduced and a complete discussion of all the covariant gauges is given. A special symmetry relating two classes of covariant gauges is exhibited. Finally Section III contains some preliminary remarks on full nonlinear gravity. In particular we argue that in contrast to gauge fields the stochastic gravitational field cannot be transformed to a Gaussian process.

45764 (UWThPh—84-46) Order of levels in potential models. Baumgartner, B.; Grosse, H.; Martin, A. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1984. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701915.

Various extensions of a previously derived theorem on the order of levels of quantum mechanical systems are discussed. Local conditions on the potential are given, such that the n-th level of angular momentum l lies above (or below) the (n-1)-th level with angular momentum $l+\alpha$. Some improved versions are formulated as conjectures and are shown to be true in certain limiting situations. As possible applications we discuss beside heavy quark systems the level order in atomic physics.

45765 (UWThPh—85-01) From relative entropy to entropy. Narnhofer, H.; Thirring, W. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701916.

We give an intrinsic definition of the entropy of a state over an algebra and show that it has the general properties of von Neumann's entropy.

45766 Optimal paths for thermodynamic systems: The ideal diesel cycle. Hoffman, K.H.; Watowich, S.J.; Berry, R.S. (Department of Chemistry and the James Franck Institute, The University of Chicago, Chicago, Illinois 60637). *Journal of Applied Physics;* **58**: No. 6, 2125-2134(15 Sep 1985).

Optimal control theory is used to determine the piston trajectory which yields maximum power output for a model which incorporates the diesel engine's major irreversibilities. Optimal trajectories were obtained for the cases of unconstrained and constrained piston acceleration. Optimizing the path for our standard engine increased both the net work output per cycle and the net efficiency by about 10%.

45767 Parametric scaling of the stability of relativistic laminar flow magnetic insulation. Antonsen T.M. Jr.; Ott, E.; Chang, C.L.; Drobot, A.T. (Science Applications International Corporation, 1710 Goodridge Drive, McLean, Virginia 22102). *Physics of Fluids;* **28**: No. 9, 2878-2881(Sep 1985).

The short wavelength limit of the magnetron instability of a relativistic sharp boundary electron sheath is examined. For short wavelengths the mode is localized to the sheath edge. This localization leads to a simple relationship (essentially a Lorentz transformation) between the relativistic and nonrelativistic growth rates. This relationship involves only equilibrium quantities evaluated at the sheath edge and explains previously noted trends that have been observed numerically.

45768 Backward wave oscillators with rippled wall resonators: Analytic theory and numerical simulation. Swegle, J.A.; Poukey, J.W.; Leifeste, G.T. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Physics of Fluids;* **28**: No. 9, 2882-2894(Sep 1985). Contract AC04-76DP00789.

In this paper, a comprehensive theoretical treatment is developed for backward wave oscillators composed of a relativistic electron beam guided by a strong magnetic field through a slow wave structure consisting of a cylindrical waveguide with a sinusoidally varying wall radius. This analysis, equally applicable to traveling wave tube operation, includes both a linearized theory of small-amplitude perturbations and numerical simulations of the saturated, large-amplitude operating regime. The variation of device operating characteristics with system parameters is examined in detail. Comparisons of the analytic and numerical results with experiments and additional calculations show excellent agreement and justify a high degree of confidence in the validity of the theory.

45769 **Fat fractals on the energy surface.** Umberger, D.K.; Farmer, J.D. (Center for Nonlinear Studies, MS B258, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **55**: No. 7, 661-664(12 Aug 1985).

For a closed system of two coupled nonlinear oscillators, chaotic orbits are punctuated by holes associated with stable periodic orbits. For the corresponding class of Hamiltonian maps we demonstrate that the combined area for all holes of size ϵ or greater scales as a power law with exponent β and asymptotic area $0 < \mu < 1$. In contrast to previous results, this is a global scaling property, valid for a set of positive Lebesgue measure. It suggests that these chaotic orbits are fat fractals, i.e., Cantor setlike objects of positive area. We numerically compute lower bounds on their area.

45770 **Generalized supersymmetric quantum mechanics.** Sathiapalan, B. (Department of Physics, University of Pennsylvania, Philadelphia, Pennsylvania 19104). *Physical Review Letters;* **55**: No. 7, 669-672(12 Aug 1985). Contract AC02-76ER03071.

The spectrum of a supersymmetric quantum mechanical theory that leads to a generalized superalgebra is computed exactly. It has the feature that both the ground and first excited levels have unequal numbers of Bose and Fermi states.

Expressions for a nonselfdual cone Vsub(II) and its dual cone Vsub(II)* are given. The Gamma function on Vsub(II) is defined, and the Siegel integral associated with Vsub(II) is written down. The Gamma function and Siegel integral on Vsub(II)* are also exhibited. From these, Cauchy-Szego kernels and formal Poisson kernels of Siegel domains of first type associated with Vsub(II) and Vsub(II)* are obtained.

45772 **(JINR—R-2-84-250) N=4 supersymmetric Liouville equation.** Ivanov, E.A.; Krivonos, S.O. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 8p. (In Russian). (CONF-840757—35). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701913.

From 22. international conference on high energy physics; Leipzig, German D.R. (19 Jul 1984).

Submitted to the journal J. Phys., A Math. Gen.: Letter to Editor.

A superfield N=4 superextension of the Liouville equation with gauge SU(2) x SU(2) symmetry is constructed. It is formulated in terms of real quaternionic N=4 superfield subjected to certain Grassmann analyticity constraints and possesses a zero-curvature representation of superalgebra su(1, 1/2). A possible relevance of the obtained system to SU(2)-superstring is discussed.

45773 **(LAPP-TH—103) Representations of OSp(M/n) and Young supertableaux.** Morel, B.; Sciarrino, A.; Sorba, P. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Apr 1984. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751193.

Young supertableaux are introduced for finite dimensional representations of orthosymplectic superalgebras and used to study their content.

45774 **(PPPL-TRANS—133) Statistics of Poincare recurrences and the structure of the stochastic layer of a nonlinear resonance.** Chirikov, B.V.; Shepelyansky, D.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.; AN SSSR, Novosibirsk. Inst. Yadernoj Fiziki). Feb 1983. Contract AC02-76CH03073. Translation of Preprint INP 81-69. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85017025.

Motion in the stochastic layer around the separatrix of a nonlinear resonance was investigated. The integral distribution function F(tau) of trajectory recurrence times tau to the center of the layer was numerically determined. It was found that the distribution F(tau) = A tau^{-}/sup p/ is a power function, the exponent assuming two different values: for tau $\leqq$ tau$_0$, p = 1/2 and for tau >> tau$_0$, p = 3/2 (time tau$_0$ is determined by the characteristics of the layer).

Lists of publications, contributions to conferences.

The research work of the Institute for Plasma Physics at Rijnhuizen during 1983 is surveyed. The Experimental Division reports on: pinches; turbulent heating in TORTUR, a small tokamak; numerical calculations on cold plasma blankets; electron cyclotron resonance heating; and, diagnostic subsystems. The Theoretical Division reports on: magnetohydrodynamics, wave dynamics and transport problems. Finally, the Department of Technology and Engineering reports on subjects as: high-power engineering, electronic control and computer hardware and software.

45776 **Fusion Energy Update: a current awareness journal.** Whitson, M.O. (ed.). *Fusion Energy Update;* No. 85/1, vp(Jan 1985). (PB—85-915301; CFU—85/1).

Available from National Technical Information Service, Springfield, VA 22161 on a subscription basis at $75.00 per volume (calendar) year.

Fusion Energy Update (CFU) provides monthly abstracting and indexing coverage of current scientific and technical reports, journal articles, conference papers and proceedings, books, patents, theses, and monographs for all sources on fusion energy. All information announced in CFU, plus additional backup information, is included in the energy information data base of the Department of Energy's Office of Scientific and Technical Information. The subject matter covered by CFU includes plasma physics, the physics and engineering of blankets, magnet coils and fields, power supplies and circuitry, cooling systems, fuel systems, radiation hazards, power conversion systems, inertial confinement systems, and component development and testing. These subjects are arranged by categories as shown in the table of contents.

7001 Plasma Research

45777 **(AD-A—153980/8/XAB) Millimeter-wave generation by relativistic electron beams. Annual report, 1 October 1983-30 September 1984.** Kuo, S.P.; Cheo, B.R. (Polytechnic Inst. of New York, Farmingdale (USA). Dept. of Electrical Engineering). 1 Dec 1984. 131p. NTIS, PC A07/MF A01.

We are studying various wave-plasma interaction processes towards the understanding of the collective physics of plasmas. The processes include the mechanisms leading to the generation of millimeter waves by relativistic electron beams (electron cyclotron maser instability) and the mechanisms providing channels for anomalous absorption of electromagnetic waves (electron cyclotron resonance heating and parametric instabilities). A single nonlinear equation that describes the temporal evolution of the field amplitude of the electron-cyclotron maser instability was derived self-consistently. Three adiabatic invariants are derived of the electron motion under the electon cyclotron resonance heating by three differently polarized heaters: (1) ordinary mode; (2) extraordinary mode; and (3) electrostatic mode. Wave-plasma interaction leading to various parametric instabilities in the ionosphere was also studied.

45778 **(AD-A—154902/1/XAB) Low-frequency instabilities driven by an ion-temperature anisotropy. Memorandum report, October 1984-October 1985.** Lee, Y.C.; Huba, J.D. (Naval Research Lab., Washington, DC (USA)). 8 May 1985. 42p. (NRL-MR—5552). NTIS, PC A03/MF A01.

A detailed linear analysis is presented of low-frequency instabilities driven by an ion-temperature anisotropy. In particular, the electromagnetic ion-cyclotron instability, the mirror instability, and the firehose instability are investigated. These instabilities require a high-beta plasma, which is typical of an early-time HANE plasma. The electromagnetic ion-cyclotron and mirror instabilities also require ion-temperature anisotrophy, while the firehose instability requires ion-temperature anisotrophy. In general, the early-time-coupling shell is expected to have ion-temperature anisotropy so that the firehose instability is not obviously relevant to HANE situations but is included for the sake of completness. An analysis of the influence of an electron temperature is also included for the sake of completeness. Also included is an analysis of the influence of an electron temperature anisotropy on the magnetohydrodynamics instability. This is an extension and correction of the work of Basu and Coppi (1984). Application of this research to HANE phenomena is discussed.

45779 **(DOE/ET/53088—172) Compressibility effects on ideal and kinetic ballooning modes and elimination of finite Larmor radius stabilization.** Kotschenreuther, M. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jul 1985. Contract FG05-80ET53088. 69p. (IFSR—172). NTIS, PC A04/MF A01; GPO Dep. File Number DE85017162.

The dynamics of ideal and kinetic ballooning modes are considered analytically including parallel ion dynamics, but without electron dissipation. For ideal modes, parallel dynamics predominantly determine the growth rate when β is within ~30% of the ideal threshold, resulting in a substantial reduction in growth rate. Compressibility also eliminates the stabilization effects of finite Larmor radius (FLR); FLR effects (when temperature gradients are neglected) can even increase the growth rate above the MHD value. Temperature gradients accentuate this by adding a new source of free energy independent of the MHD drive, in this region of ballooning coordinate corresponding in MHD to the continuum. Analytic dispersion relations are derived demonstrating the effects above; the formalism emphasizes the similarities between the ideal MHD and kinetic cases.

45780 **(INIS-mf—9746) Linear and nonlinear wave propagation and mode conversion in an inhomogeneous, unmagnetized plasma with a resonance.** Kamp, L.P.J. (Technische Hogeschool Eindhoven (Netherlands)). 8 May 1984. 278p. NTIS (US Sales Only), PC A13/MF A01. File Number DE85781542.

Includes Dutch summary; 197 refs.; 23 figs.

In this thesis some aspects of linear and nonlinear wave propagation and wave conversion in an inhomogeneous, unmagnetized, lossless plasma with a resonance are elucidated. After the general introduction an infinitely long, cylindrical antenna immersed in an inhomogeneous, cold plasma with a resonance is studied. In order to understand better the singular behaviour of the radiated electromagnetic field and its absorption in the resonance layer, a more realistic plasma is considered. A theory is developed of linear mode conversion in a planarly stratified, warm plasma with a resonance that is based on a two-fluid model for the plasma. These results are rediscovered in the limit of low temperatures by means of a kinetic approach to the problem of linear mode conversion. Finally the modification is described of the electron-density profile by a force of nonlinear origin. A new type of modulational instability is analyzed and the propagation of solitons and cavitons in the resonance region is studied.

45781 **(INIS-mf—9747) Investigation of pulsed high density plasmas.** Timmermans, C.J. (Technische Hogeschool Eindhoven (Netherlands)). 25 May 1984. 164p. NTIS (US Sales Only), PC A08/MF A01. File Number DE85781540.

Includes Dutch summary; 164 refs.; 86 refs.; 2 tabs.

In this thesis a wall-stabilized argon cascade arc is studied at values of pulsed pressure up to 14 bar and a pulsed current range up to 2200 A with a time duration of about 2 ms. The basic plasma is a CW cascade arc with a 5 mm diameter plasma column and a length of 90 mm, which operates at a 60 A DC current and at one atmosphere filling pressure. The author starts with an extensive summary of the CW arc investigations. After a brief introduction of the basic transport equations the mass equations of the constituent particles are treated using the extended collisional radiative model. The energy balance equations and the momentum balance are discussed. The electron density is determined from measurements of the continuum radiation. The final chapter contains the experimental results on the electron temperatures and electron densities in the pressure and current pulsed plasma. Attention is given to the deviations from local thermodynamic equilibrium values of the ground level densities of the different argon systems.

45782 **(INIS-mf—9754) Kinetic theory of the one-component plasma.** Cohen, J.S. (Amsterdam Univ. (Netherlands)). 19 Dec 1984. 116p. NTIS (US Sales Only), PC A06/MF A01. File Number DE85781541.

Includes Dutch summary; 58 refs.; 4 figs.; 8 tables.

In this thesis, kinetic theory is applied to transport phenomena of a one-component plasma. Existing kinetic equations, containing both dynamical screening effects and close binary collisions do not suffer from divergencies. Recently an approximation for the pair correlation function has been proposed that is valid for small values of the plasma collision parameter. Upon insertion of this expression into the general form of the collision integral, one obtains another convergent kinetic equation. This thesis shows that both kinetic equations yield the same coefficient of heat conductivity and viscosity; and that for a hot dilute plasma the arbitrary transport coefficient is rather insensitive to the pair correlation function. In the second part, the author studies the diffusion of a tagged particle in an external magnetic field. It is found that the longitudinal self-diffusion coefficient contra-varies monotonically with the magnetic field strength.

45783 **(INIS-mf—9755) Curvature-induced electrostatic drift modes in a toroidal plasma.** Venema, M. (Rijksuniversiteit Utrecht (Netherlands)). 9 Jan 1985. 100p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85781543.

Includes Dutch summary; 51 refs.; 38 figs.

This thesis deals with a number of problems in the theory of linear stability of a hot, fully ionized plasma immersed in a strong magnetic field. The most widely used system to magnetically confine a plasma is the tokamak. This is a toroidal, current carrying device with a strong, externally imposed, magnetic field. The author discusses the linear theory of unstable, low-frequency waves in the gradient region, restricted to electrostatic waves. In that case the resulting radial fluxes of particles and energy are due to electric cross-field drifts. In the presence of magnetic fluctuations and small-scale reconnection phenomena, radial transport could also be predominantly along field lines. At present, it is not clear which of the two mechanisms is the dominant feature of the observed anomalous transport. First, the author introduces the theory of drift waves in toroidal geometry. Next, the electrostratic drift modes in toroidal geometry (weakly collisional regime), the equations for low-frequency waves in the strongly collisional regime and the electrostatic drift modes (strongly collisional regime) are discussed.

45784 **(UCRL—91640) Elimination of electromagnetic radiation in plasma simulation: the Darwin or magnetoinductive approximation.** Hewett, D.W. (Lawrence Livermore National Lab., CA (USA)). 21 Feb 1985. Contract W-7405-ENG-48. 16p. (CONF-850266—7). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016074.

From 2. international school for space simulation; Honolulu, HI, USA (3 Feb 1985).

For many astrophysical and most magnetic fusion applications, the purely electromagnetic modes generated by real as well as simulation "plasma" fluctuations are a source of high frequency radiation that is often irrelevant to the physics of interest. Unfortunately, a numerical CFL stability limit prevents either making c infinite or deltat large while using the usual explicit Maxwell's equations for the fields. A modification of Maxwell's equations, which provides implicitly the field components, circumvents this problem. The solution is to neglect retardation effects so that the electromagnetic propagation speed is effectively infinite. The purely electro-

magnetic modes in this limit evolve "instantly" to a time-asymptotic configuration about the macroscopic plasma configuration at each new time level. The Darwin or magnetoinductive approximation effectively provides infinite propagation speeds for purely electromagnetic modes by converting Maxwell's equations from hyperbolic to elliptic in character. In practice, this is accomplished by neglecting the solenoidal part of the displacement current. The elimination of the CFL time step constraint more than offsets the substantially more complicated field solution that is required. The details of a numerical implementation of this model will be presented. Numerical examples will be given and extentions of the Darwin field solution to other plasma models also will be considered. 9 refs., 3 figs.

45785 **(UCRL—92689) Acceleration of compact torus plasma rings in a coaxial rail-gun.** Hartman, C.W.; Hammer, J.H.; Eddleman, J. (Lawrence Livermore National Lab., CA (USA)). 16 May 1985. Contract W-7405-ENG-48. 5p. (CONF-8505100—18). NTIS, PC A02/MF A01; GPO Dep. File Number DE85016069.

From 7. US symposium on compact toroid research; Santa Fe, NM, USA (21 May 1985).

We discuss here theoretical studies of magnetic acceleration of Compact Torus plasma rings in a coaxial, rail-gun accelerator. The rings are formed using a magnetized coaxial plasma gun and are accelerated by injection of B/sub θ/ flux from an accelerator bank. After acceleration, the rings enter a focusing cone where the ring is decelerated and reduced in radius. As the ring radius decreases, the ring magnetic energy increases until it equals the entering kinetic energy and the ring stagnates. Scaling laws and numerical calculations of acceleration using a O-D numerical code are presented. 2-D, MHD simulations are shown which demonstrate ring formation, acceleration, and focusing. Finally, 3-D calculations are discussed which determine the ideal MHD stability of the accelerated ring.

45786 **Radio frequency heating in the ion-cyclotron range of frequencies.** Swanson, D.G. (Department of Physics, Auburn University, Auburn, Alabama 36849). *Physics of Fluids;* **28**: No. 9, 2645-2677(Sep 1985). Contract AS05-82ER53134.

Both the theory of the absorption process in the ion-cyclotron range of frequencies and some of the experiments which slow the promise and problems with radio frequency plasma heating in this range are discussed. It is shown that mode conversion is invariably involved in the process and so an extensive review of mode conversion theory, expecially as it applies to problems with back-to-back cutoff-resonance pairs, is included. This includes a discussion of the tunneling equation with and without absorption effects and with and without energy conservation. The general theory is applied to various ion-cyclotron harmonics, the two-ion hybrid resonance, and to a case where a wave converts to a Bernstein mode at the plasma edge. The results are given analytically for a variety of cases without absorption, and empirical formulas are given for the second and third harmonics of the ion-cyclotron frequency, which include effects of absorption. Various problem areas in the theory are also discussed with some of the limitations caused by the approximations involved. A number of experiments are also discussed which show effective heating, and some show the features of the mode conversion process, indicating that the general processes of absorption are reasonably well understood. Areas where further work is necessary, both in fundamental theory and in comparing theory with experiment, are also discussed.

45787 **Electron confinement in a bumpy torus without the influence of hot-electron rings: "Ring killer" experiment.** Hillis, D.L.; Wilgen, J.B.; Cobble, J.A.; Davis, W.A.; Hiroe, S.; Rasmussen, D.A.; Richards, R.K.; Uckan, T.; Jaeger, E.F.; Hankins, O.E. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physics of Fluids;* **28**: No. 9, 2848-2856(Sep 1985). Contract AC05-84OR21400.

The ELMO Bumpy Torus (EBT) [Plasma Physics and Controlled Nuclear Fusion (IAEA, Vienna, 1975), Vol. II, p. 141] normally has an energetic electron ring in each of its 24 mirror sectors. The original intention of using this hot-electron population was to provide an average local minimum in the magnetic field (through its diamagnetism) to stabilize the simple interchange and flute modes, which otherwise are theoretically inherent in a closed-field-line bumpy torus. To study the confinement properties of a bumpy torus without the influence of hot-electron rings, a water-cooled stainless steel limiter in each mirror sector was extended into the plasma to the ring location; this eliminated the hot-electron ring population. These limiters were aptly named "ring killers." Electron temperature, density, space potential, and plasma fluctuations have been measured during the ring killer experiment and are compared to standard EBT operation. The results of these experiments indicate that the hot-electron rings in EBT do enhance the core plasma properties of EBT and do, in fact, reduce plasma fluctuations; however, these improvements are not large in magnitude. These measurements and recent theoretical models suggest that simple interchange/flute modes are stabilized, or fluctuation levels reduced, well before that condition is obtained for average minimum-B stabilization.

45788 **Viscous effects in a collisional tokamak plasma with strong rotation.** Stacey W.M. Jr.; Sigmar, D.J. (Georgia Institute of Technology, Atlanta, Georgia 30332). *Physics of Fluids;* **28**: No. 9, 2800-2807(Sep 1985).

The full viscosity tensor for an axisymmetric toroidal plasma in the collisional regime (with strong rotation) is calculated, including gyroviscosity and O(ϵ) poloidal variations over the flux surface. It is shown that the resulting viscous force is of sufficient magnitude to account for the radial transfer of toroidal momentum that must be inferred in order to explain the rotation measurements in tokamak experiments. The consequences of a viscous force of this form and magnitude on particle transport and on the evolution of toroidal and poloidal rotation velocities are discussed.

45789 **Simulations of the single-mode, bump-on-tail instability.** Denavit, J. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Physics of Fluids;* **28**: No. 9, 2773-2777(Sep 1985).

The nonlinear saturation of the single-mode, bump-on-tail instability is studied by numerical solutions of the Vlasov equation. Modes close to marginal stability are found to saturate with a field amplitude EproportionalΔ^{3}, where the small parameter $\Delta = 2(\omega-\omega')/\omega'$ defines the difference between the mode frequency ω and the frequency ω' of the marginally stable mode. This scaling agrees with O'Neil's theory [Phys. Fluids 14, 1204 (1971)] of the two-stream instability, and does not confirm the time asymptotic analysis of Simon and Rosenbluth [Phys. Fluids 19, 1567 (1976)], which predicts larger amplitudes with EproportionalΔ^{1}/sup //^{3}.

45790 **Ponderomotive and sideband coupling effects of ion-cyclotron heating on interchange stability.** Cohen, B.I.; Rognlien, T.D. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Physics of Fluids;* **28**: No. 9, 2793-2799(Sep 1985). Contract W-7405-ENG-48.

Two-fluid theory is used to calculate the nonlinear effect of a finite-amplitude ion-cyclotron wave on the simple interchange stability of a magnetically confined plasma. The ion-cyclotron wave nonlinearly modifies interchange stability through ponderomotive effects and coupling to sidebands of the ion-cyclotron wave. Nonlinear stability criteria for flute modes are derived. The nonuniformity and polarization of the ion-cyclotron wave significantly influence the results. A theoretical explanation for recent experimental observations in axisymmetric mirror and tandem mirror plasmas of reduced levels of magnetohydrodynamic activity in the presence of ion-cyclotron resonant heating remains elusive.

45791 **Ballooning stability boundaries with plasma compression.** Cooper, W.A.; Sigmar, D.J.; Hirshman, S.P. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physics of Fluids;* **28**: No. 9, 2813-2815(Sep 1985). Contract AC05-84OR21400.

Level curves for the resistive compressible ballooning growth rates and the ideal ballooning stability boundaries with incompressibility and perpendicular compressibility are determined in the parameter space of shear-versus-pressure gradient for realistic

tokamak equilibria. The trajectories of these level curves differ from the ideal incompressible stability boundary in this space.

45792 **Quasilinear saturation of the kinetic ion mixing mode.** Migliuolo, S. (Research Laboratory of Electronics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physics of Fluids;* **28**: No. 9, 2778-2785(Sep 1985). Contract AC02-78ET51013.

The linear and quasilinear theories of the ion mixing mode are discussed in the electrostatic limit. The source of free energy for the instability is the ion temperature gradient. The parameter relevant to this calculation is eta/sub i/ = (d ln T/sub i//dr)/(d ln n/dr). Generally, this mode has a phase velocity comparable to the ion thermal velocity and there exist values of eta/sub i/ that yield maximum growth. By using a time-asymptotic formalism, we are able to discuss the quasilinear saturation of this mode. Short wavelength modes saturate at small amplitudes, 'ephi$_i$/T/sub i/'^{2} < or =(eta/sub i/-eta/sub c/)/eta/sub c/, where eta/sub c/ is the value of eta/sub i/ at marginal stability, and the saturated state is stable against further perturbations. Long wavelength modes also saturate, though the saturation is of the "hard" type: the saturated state itself is unstable. When saturation occurs, it is caused by reduced inverse ion Landau damping brought about both by the nonlinear frequency shift and by quasilinear modifications to the ion distribution function.

45793 **Analytical mode conversion calculations for the full wave equations at the ion second harmonics.** Chiu, S.C. (GA Technologies Inc., San Diego, California 92138). *Physics of Fluids;* **28**: No. 9, 2808-2812(Sep 1985). Contract AC03-84ER53158.

The wave equations for the second harmonic ion-cyclotron heating as derived from the Maxwell equations, rather than the model fourth-order equation, are solved analytically. With a better treatment of the wave field near the second harmonic resonance layer, the WKBJ solution can be improved to give results valid over a larger range of tunneling parameters than those derived in a previous work on a similar subject [J. Plasma Phys. 27, 327 (1982)]. Dissipation is also discussed and connection with the Budden model is shown.

45794 **Dissipative trapped particle modes in tandem mirrors.** Berk, H.L.; Rosenbluth, M.N.; Cohen, R.H.; Nevins, W.M. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712). *Physics of Fluids;* **28**: No. 9, 2824-2837(Sep 1985).

Dissipative trapped particle modes are studied in tandem mirrors by including electron collisions and ion Landau damping. A variational approach is used to obtain a collisional response in terms of the collisionless result plus a collisional term. The collisional term is then self-consistently solved in all collision frequency regimes. When $\nu/\omega << 1$ (vequivalentelectron collision frequency) and the dissipationless mode is stable through a positive (negative) charge uncovering mechanism, there are two stable waves with phase velocities in the ion (electron) diamagnetic direction. The higher frequency wave with $\omega \sim \omega$(/sub i/(ω(/sub e/) is destabilized by ion (electron) dissipation while the lower frequency wave is destabilized by electron (ion) dissipation. At high collision frequency ($\nu > \omega$(/sub e/), the only unstable trapped particle wave has $\omega \sim \omega$(/sub e/, with electron collisions being destabilizing.

45795 **Observation of the backward electrostatic ion-cyclotron wave.** Goree, J.; Ono, M.; Wong, K.L. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physics of Fluids;* **28**: No. 9, 2845-2847(Sep 1985). Contract AC02-76CH03073.

The backward branch of the electrostatic ion-cyclotron wave has been observed for the first time. The wave, which was driven by a phased antenna structure inserted in a neon plasma, exists in the parameter ranges 2T/sub i//m/sub i/ << (ω/k/sub parallel/)^2 << 2T/sub e//m/sub e/, nΩ/sub i/ < ω < (n+1)Ω/sub i/, T/sub e/ > or ≃T/sub i/, and ω/sub p/i > Ω/sub i/. Double-tip probe interferometry data agree with the theoretical dispersion relation. The antenna couples into the wave more readily on the side of the antenna where it has its smallest wavenumber.

45796 **Emission of light at half-integer harmonics of the laser frequency.** Berger, R.L.; Powers, L.V. (KMS Fusion, Inc., Ann Arbor, Michigan 48106). *Physics of Fluids;* **28**: No. 9, 2895-2909(Sep 1985). Contract AC08-82DP40152.

Calculations have been made of the spectrum of light emitted at half-integer harmonics of the laser light frequency ω_0. The emitted light results from either the Raman scattering of laser light by Langmuir waves or by the direct conversion of Langmuir waves to light. The Langmuir wave amplitude is calculated from convective instability theory for two-plasmon decay in an inhomogeneous, plane-stratified medium. The Raman scattering process generates harmonics at (n/2) ω_0 where n = 1,3,5 ...; however, only for n = 1 and 3 is the emission level significant. The conversion process produces (1/2) ω_0 light with a comparable efficiency to the Raman scattering process near the two-plasmon instability threshold. Results of the calculation are in agreement with the general features of measured emission spectra.

45797 **Brillouin scattering, two-plasmon decay, and self-focusing in underdense ultraviolet laser-produced plasmas.** Tanaka, K.; Boswell, B.; Craxton, R.S.; Goldman, L.M.; Guglielmi, F.; Seka, W.; Short, R.W.; Soures, J.M. (Laboratory for Laser Energetics, University of Rochester, 250 East River Road, Rochester, New York 14623-1299). *Physics of Fluids;* **28**: No. 9, 2910-2914(Sep 1985). Contract FC08-85DP40200.

Underdense foam targets were irradiated with a single UV laser beam at intensities up to 10^{15} W/cm^2. The incident laser propagated into the foam a distance of 500—1000 μm, depending on the average target density. The backscattered Brillouin and $3\omega_0/2$ radiation were observed to have the same dependence on the incident laser intensity, indicating a strong interrelation of these processes. A possible coupling mechanism is proposed.

45798 **Nonlocal energy deposition in high-intensity laser-plasma interactions.** Wallace, J.M. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **55**: No. 7, 707-710(12 Aug 1985).

Electrons heated by the absorption of laser energy on planar targets generate megagauss magnetic fields which, together with the coproduced electric fields, transport the electrons away from the laser spot. We present a computational model showing that these superthermal electrons deposit their energy into plasma thermal energy in an expanding annular region in the target plane centered at the spot. The model provides a quantitative explanation for some complex and heretofore poorly understood lateral transport phenomenology.

45799 **Ambipolar electric field in stellarators.** Hastings, D.E.; Houlberg, W.A.; Shaing, K.C. (Oak Ridge National Lab., TN (USA)). *Nuclear Fusion;* **25**: No. 4, 445-454(Apr 1985).

In a three-dimensional device like a stellarator, the ambipolar electric field must be determined self-consistently from the ambipolarity constraint and can have a significant effect on transport through the diffusion coefficients. A differential formulation and an algebraic formulation for the electric field are solved, together with the density and temperature equations. The results are compared, and in both cases multiple electric field solutions can exist, with bifurcations occurring between different solutions. It is shown that heating of the electrons encourages bifurcation to the more favourable positive electric field root.

45800 **Plasma confinement and heating in stellarators. Report on the 5. International Workshop - IAEA Technical Committee Meeting held at Schloss Ringberg (near Lake Tegern, Bavaria), Germany, F.R., 24-28 September 1984.** Callen, J.D. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering and Physics). *Nuclear Fusion;* **25**: No. 4, 485-493(Apr 1985).

This report presents the highlights of the Fifth International Workshop on Stellarators (September 1984, Bavaria); The workshop programme was organized into five sections: 1) Overview of experimental results; 2) Topical experimental details (heating, transport, impurities); 3) Theory (equilibrium and stability, transport); 4)

Machines under construction or approved; 5) Configuration and reactor studies. A summary of the latest developments is presented along these lines.

45801 **Numerical study of thermal equilibrium and a catastrophe model for major disruptions in tokamaks.** Yu, G.Y.; Guzdar, P.N.; Lee, Y.C. (Maryland Univ., College Park (USA). Lab. for Plasma and Fusion Energy Studies). *Nuclear Fusion;* **25**: No. 4, 403-417(Apr 1985).

The thermal equilibrium of tokamak plasmas is studied by solving the electron and ion energy balance equations numerically. Three basic types of thermal equilibria, depending on different boundary temperatures, are found. The presence of a fold or cusp catastrophe structure of the equilibrium curves for temperature versus density in the case of low-boundary temperature indicates the existence of a density limit beyond which no equilibrium or only a trivial equilibrium exists. Major disruptions are considered to occur because of the loss of thermal equilibrium of the tokamak plasma. The study shows that major disruptions can be parametrically controlled. Thermal equilibria with higher boundary temperature display a monotonic structure of the temperature versus density curve, indicating good confinement characteristics and hence the absence of disruptions.

45802 **Low-energy beam pumping in TARA reactor design.** Xing-Zhong Li; Kesner, J. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). *Nuclear Fusion;* **25**: No. 4, 425-433(Apr 1985).

The possibility of neutral-beam pumping in a tandem mirror thermal-barrier region is explored. To reduce the necessary neutral-beam pumping power, substituting low- for high-energy neutral beams is investigated. With the help of a two-step square well model and a variational expression for the trapping current, the competition between the trapping process and the drag effect for the deeply trapped particles is illustrated. This competition can lead to a stable equilibrium with reduced pumping power.

45803 **Fokker-Planck calculations for JET ICRF heating scenarios.** Scharer, J. (Wisconsin Univ., Madison (USA)); Jacquinot, J.; Lallia, P.; Sand, F. (Commission of the European Communities, Abingdon (UK). JET Joint Undertaking). *Nuclear Fusion;* **25**: No. 4, 435-444(Apr 1985).

Flux-averaged ICRF heating of the JET tokamak is considered, utilizing an anisotropic, time-dependent Fokker-Planck code. Alternative ICRF heating scenarios are considered, and fundamental minority deuterium and second-harmonic tritium and deuterium cases are selected for detailed analysis of wave accessibility, strong single-pass damping and enhanced ion-tail-produced fusions. It is found that enhanced fusions, resulting from heated minority deuterium ion tails, and second-harmonic deuterium heating, yielding fusion power gains near Q=1, can be achieved near the plasma core with moderate absorbed power levels, pulse widths and energy confinement times. The corresponding case for second-harmonic tritium heating located on the major axis, with the associated fusion power gain, does not appear as attractive.

45804 **Enhancement of the reaction rate by ICRF heating.** Krapchev, V.B. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). *Nuclear Fusion;* **25**: No. 4, 455-461(Apr 1985).

ICRF heating at the second harmonic of deuterium in a D-T plasma produces an anisotropic tail of the deuterium ions in the direction perpendicular to the magnetic field. The non-Maxwellian distribution function leads to a significant enhancement of the reaction rate, corresponding to that of Maxwellian ions at much higher bulk temperature. The auxiliary power in the presence of ICRF is determined self-consistently from the power balance. It is shown that the enhanced reaction rate leads to savings in the peak power requirements.

45805 **Effects of varying wall conditions, minor and major radii on confinement properties in ISX-B.** Wootton, A.J.; Bush, C.E.; Edmonds, P.H.; Howe, H.C.; Lazarus, E.A.; Ma, C.H.; Murakami, M.; Neilson, G.H. (Oak Ridge National Lab., TN (USA)). *Nuclear Fusion;* **25**: No. 4, 479-484(Apr 1985).

Letter-to-the-editor.

The Impurity Study Experiment (ISX-B) data base from which the energy confinement time scaling tausub(E)varies as to Isub(p)sup(3/2) Psub(b)sup(-2/3) was derived for neutral-beam-heated discharges has been enlarged. Results obtained by using a non-gettered vacuum vessel and different minor and major radii are now included. Energy confinement times improve and a density dependence is introduced, if gettering is not employed. There is an associated increase in impurity radiation. A comparison of confinement properties obtained by using two minor radii (approx. 19 cm and the usual approx. 26 cm) has been made. The correlation between radiation level and confinement is always found. No dependence of energy confinement on the minor radius is found. The confinement changes associated with wall conditions and radiation levels can be reproduced by using a gettered vessel and small plasma position displacements. In particular, outward radial displacements toward a limiter at the outer equator improve confinement. In this case, any radiation increase is small.

45806 **Rotation and impurity transport in a tokamak plasma with directed neutral-beam injection.** Stacey, W.M. Jr.; Bailey, A.W. (Georgia Inst. of Tech., Atlanta (USA)); Sigmar, D.J.; Shaing, K.C. (Oak Ridge National Lab., TN (USA)). *Nuclear Fusion;* **25**: No. 4, 463-477(Apr 1985).

The authors have extended their previous collisional-regime theory for rotation and impurity transport in a tokamak plasma with strong, directed NBI and strong rotation (vsub(phi)approx. = vsub(th)) to the plateau regime. The paper gives a summary of a kinetic theory derivation of the parallel viscous force in the strong rotation ordering and a self-consistent formalism for calculating ion and impurity rotation velocities and radial transport fluxes, as well as the radial electric field and the poloidal variation of the impurity density upon which the former strongly depend. Calculations for model problems representative of ISX-B and PLT are presented. The predicted impurity transport exhibits features that are in agreement with experimental observations.

45807 **Hybrid-kinetic simulation of the generation of mass flow due to plasma-wall interaction in reversed-field pinches.** Mondt, J.P. (Los Alamos National Lab., NM (USA)); Hewett, D.W. (Lawrence Livermore National Lab., CA (USA)). *Plasma Physics and Controlled Fusion;* **27**: No. 3, 339-347(Mar 1985).

Flux loop and line density measurements in the reversed-field pinch ZT-40M indicate the existence of poloidally symmetric excitations in the edge that move in the direction anti-parallel to the toroidal current with a velocity of the order of the thermal ion speed. A recently proposed mechanism of momentum transfer between the plasma and the wall explains these observations by showing that plasma flow near the wall can be sustained over magneto-hydrodynamic time scales as a result of unidirectional transfer of momentum during a collision with the wall of an ion with finite gyroradius. The present hybrid-kinetic simulations substantiate the proposed mechanism by showing that within a few to ten microseconds flow of the required direction and order of magnitude results from collisions of ions with a momentum-absorbing wall.

45808 **Hot particle kinetic effects on ballooning in Tokamaks at high mode numbers.** Catto, P.J. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.); Hastie, R.J.; Connor, J.W. (Euratom/UKAEA Fusion Association, Abingdon (UK). Culham Lab.). *Plasma Physics and Controlled Fusion;* **27**: No. 3, 307-319(Mar 1985).

The equations describing short wavelength ballooning modes in a Tokamak are derived by retaining hot species finite Larmor radius effects and permitting the response of the hot populations to be evaluated for frequencies on the order of and below the hot particle magnetic drift frequency. The derivation relies on the high beta Tokamak ordering of a general system of equations that has been derived to investigate the role of the hot species in tandem mirrors and bumpy tori. Bounce averaging of the background ion species is shown to be unnecessary.

45809 **Ion-acoustic solitons in a multi component plasma: comparison of different theoretical models.** Raychaudhuri, S. (Iowa Univ., Iowa City (USA). Dept. of Electrical and Computer Engineering; Saha Inst. of Nuclear Physics, Calcutta (India)); Gabl, E.F. (Iowa Univ., Iowa City (USA). Dept. of Electrical and Computer Engineering; KMS Fusion, Inc., Ann Arbor, MI (USA)); Das, K.P. (Calcutta Univ. (India). Centre of Advanced Study in Applied Mathematics); Sengupta, S.N. (Saha Inst. of Nuclear Physics, Calcutta (India)). *Plasma Physics and Controlled Fusion;* **27**: No. 3, 299-306(Mar 1985).

Conditions for the existence of ion-acoustic solitons have been derived and studied for a warm multi-ion component plasma with two electron temperatures. The models: (a) Reductive perturbation method (using KdV equation), (b) Warm ion fluid theory and (c) Kinetic theory approach have been compared.

45810 **Effects of positive potential in the catastrophe theory study of the point model for bumpy tori.** Punjabi, A.; Vahala, G. (College of William and Mary, Williamsburg, VA (USA). Dept. of Physics). *Journal of Plasma Physics;* **33**: 119-149(Feb 1985).

With positive ambipolar potential, ion non-resonant neoclassical transport leads to increased particle confinement times. In certain regimes of filling pressure, microwave powers (ECRH and ICRH) and positive potential, new folds can now emerge from previously degenerate equilibrium surfaces allowing for distinct C, T, and M modes of operation. A comparison in the equilibrium fold structure is also made between (i) equal particle and energy confinement times, and (ii) particle confinement times enhanced over the energy confinement time. The nonlinear time evolution of these point model equations is considered and confirms the delay convention occurrences at the fold edges. It is clearly seen that the time-asymptotic equilibrium state is very sensitive, not only to the values of the control parameters (neutral density, ambipolar electrostatic potential, electron and ion cyclotron power densities) but also to the initial conditions on the plasma density, and electron and ion temperatures.

45811 **Collective effects in spin polarized plasmas.** Coppi, B. (Princeton Univ., NJ (USA). Plasma Physics Lab.; Massachusetts Inst. of Tech., Cambridge (USA)); Cowley, S.; Kulsrud, R. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Detragiache, P.; Pegoraro, F. (Scuola Normale Superiore, Pisa (Italy)). *Comments on Plasma Physics and Controlled Fusion;* **9**: No. 2, 49-62(Jan 1985).

A fusing plasma with coherently polarized spin nuclei can be subject to instabilities due to the anisotropy of the reaction products distribution in velocity space that is a result of their polarization. The characteristics of these instabilities depend strongly on the plasma spatial inhomogeneities and a significant rate of spin depolarization can be produced by them if adequate fluctuation amplitudes are reached. The results of the relevant analysis are, in addition, of interest for plasma heating processes with frequencies in the range of the cyclotron frequencies of the considered nuclei.

45812 **Excitation of the space charge waves in the laser beat wave accelerator.** Tang, C.M.; Sprangle, P. (Naval Research Lab., Washington, DC). pp 99-103 of Lasers '83. Proceedings of the international conference. Powell, R.C. McLean, VA; STS Press (1985). (CONF-831265—). Contract AI05-83ER40117.

From 6. international conference on lasers and applications; San Francisco, CA, USA (12 Dec 1983).

The excitation of plasma waves by two laser beams, whose frequency difference is approximately the plasma frequency, is analyzed. The nonlinear analysis is fully relativistic and includes mismatching of the laser beat frequency to the plasma frequency, time dependent laser amplitudes, and an applied transverse magnetic field (surfatron). For a given beat frequency, laser power, and plasma density, the peak accelerating electric field and its phase velocity has been found. The transverse magnetic field is found to increase the effective plasma frequency, but has little effect on the plasma dynamics. 9 references.

45813 **Plasma-fiber laser accelerator.** Tajima, T. (Texas Univ., Austin). pp 104-107 of Lasers '83. Proceedings of the international conference. Powell, R.C. McLean, VA; STS Press (1985). (CONF-831265—). Contract FG05-80ET53088.

From 6. international conference on lasers and applications; San Francisco, CA, USA (12 Dec 1983).

Under the conditions presently elucidated, a laser electromagnetic wave trapped in a plasma fiber is noted to be capable of exciting a beat plasma wave possessing a flat phase front which propagates either at the speed of light, or any desired lower speed. In the unique case where the fiber defines a vacuum, it remains possible to generate a wave whose phase velocity is nearly that of light in the direction of particle propagation, in the case of a plasma slow wave structure, or in curved geometry. While the laser field parallel component is used to impart acceleration, the perpendicular component is either cancelled by the imposed static magnetic field force or directly employed in particle containment. 8 references.

45814 **Plasma physics of the beam plasma discharge.** Papadopoulos, K. (Science Applications, Inc., McLean, VA (USA); Maryland Univ., College Park (USA)). *Comments on Plasma Physics and Controlled Fusion;* **9**: No. 1, 11-21(Nov 1984).

The scaling for the ignition of beam plasma discharge (BPD) observed in many laboratory experiments is consistent with the requirement for triggering an absolute instability near the plasma frequency (ωsub(e)). The transition in the scaling with pressure can be attributed to transition from Bohm to classical diffusion losses.

45815 **Axial energy loss of a moving ion ring in a plasma.** Sudan, R.N.; Lyster, P.M. (Cornell Univ., Ithaca, NY (USA). Lab. of Plasma Studies). *Comments on Plasma Physics and Controlled Fusion;* **9**: No. 1, 35-44(Nov 1984).

The axial drag on a moving ion ring in a plasma due to the generation of magnetohydrodynamic waves is calculated for large magnetic Reynolds number. The predicted stopping length checks reasonably with particle simulation computations.

45816 **Injection and trapping of energetic ions in compact torus configurations.** Sudan, R.N.; Lyster, P.M. (Cornell Univ., Ithaca, NY (USA). Lab. of Plasma Studies). *Comments on Plasma Physics and Controlled Fusion;* **9**: No. 1, 23-34(Nov 1984).

It is shown that energetic ions can be injected and trapped in CT configuration through collective effects. Once trapped, the injected ions may be accelerated by the CT flux decay or they may transfer energy to the CT plasma depending upon the CT/ring hybrid parameters.

45817 **X-ray spectroscopy from variable Z laser-produced plasmas.** Kauffman, R.L.; Lee, R.W.; Matthews, D.L. (Lawrence Livermore National Lab., CA (USA)); Kilkenny, J.D. (Imperial Coll. of Science and Technology, London (UK). Blackett Lab.). *Journal of Quantitative Spectroscopy and Radiative Transfer;* **32**: No. 4, 335-342(Oct 1984).

We have investigated the sensitivity of X-ray line intensities as a laser-plasma diagnostic by seeding Si in CH and PbO plasmas. The Si K X-ray spectrum is measured using both time-integrating and time resolving spectrographs to investigate the effect of time averaging on the line intensities. The measured intensities are compared with theoretical estimates for an isothermal, isodensity plasma. Si line intensities vary with the Z of the plasma, as expected from simple scaling models, indicating the Si lines can be a good plasma diagnostic. The line intensities do not predict a unique temperature and density, but, instead, the inferred temperature and density vary, depending on the line ratio used. These variations are attributed to large spatial gradients of temperature and density in the plasmas. Problems in interpretation are discussed, as well as possible directions for future experiments.

45818 Nonlinear waves in the pellet fusion process. Ervin, V.J.; Ames, W.F. (School of Mathematics, Georgia Institute of Technology, Atlanta (USA)); Adams, E. (Institut fuer Angewandte Mathematik, Karlsruhe Univ. (Germany, F.R.)). pp 199-210 of Wave phenomena: modern theory and applications. Papers presented at an international meeting held at the University of Toronto, June 20-24, 1983. Rogers, C. (Waterloo Univ., Ontario (Canada)); Moodie, T.B. (Alberta Univ., Edmonton (Canada)) (eds.). Amsterdam, Netherlands; North-Holland (1984). (CONF-8306143—).

From Wave phenomena conference; Toronto, Canada (20 Jun 1983).

A gas dynamic model of the pellet fusion process having a time-invariant source term is studied by means of group analysis. Some exact solutions of this nonlinear system are constructed for specific (physical) values of parameters. The development of multiple shock waves is demonstrated in several cases analytically. Additional numerical results illustrate the evolution of singularities.

45819 Cold plasma waves. Booker, H.G. Dordrecht, Netherlands; Martinus Nijhoff (1984). 364p.

Includes bibliographical references and subject index.

The book aims to present current knowledge concerning the propagation of electromagnetic waves in a homogeneous magnetoplasma for which temperature effects are unimportant. It places roughly equal emphasis on the radio and the hydromagnetic parts of the electromagnetic spectrum. The dispersion properties of a magnetoplasma are treated as a function both of wave frequency (assumed real) and of ionization density. The effect of collisions is included only in so far as this can be done with simplicity. The book describes how pulses are radiated from both small and large antennas embedded in a homogeneous magnetoplasma. The power density radiated from a type of dipole antenna is studied as a function of direction of radiation in all bands of wave frequency. Input reactance is not treated, but the dependence of radiation resistance on wave frequency is described for the entire electromagnetic spectrum. Also described is the relation between beaming and guidance for Alfven waves.

45820 (PPPL-TRANS—132) Dynamics of disruptive instability growth in a tokamak. Ivanov, N.V. (Princeton Univ., NJ (USA). Plasma Physics Lab.; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). May 1979. Contract AC02-76CH03073. Translation source information not available . 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85017026.

This paper presents considerations concerning possible formation dynamics of voltage pulses in a discharge during disruptive instability in a tokamak, based on a model of relaxation oscillations of pulse current radial distribution profile. Increments of instability growth needed to explain the predisruptions and disruptions observed in experiments are evaluated. The results of assessments are compared with the values predicted by the theory for instabilities of various physical natures.

45821 (PPPL-TRANS—131) "Mode locking" of plasma helical instability in a tokamak. Ivanov, N.V. (Princeton Univ., NJ (USA). Plasma Physics Lab.; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). May 1979. Contract AC02-76CH03073. Translation source information not available . 13p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85017020.

Considerations are presented concerning a possible mechanism of "mode locking" of plasma helical instability in a tokamak by an external alternating magnetic field. Frequency dependence of "locking" threshold, phase and amplitudes of "locked" mode are calculated for a model of a driven wave with a mixed amplitude.

45822 (PPPL-TRANS—130) Modeling of plasma heating with neutral beam injection in T-11 machine. Dnestrovskii, Yu.N.; Kostomarov, D.P.; Lysenko, S.T. (Princeton Univ., NJ (USA). Plasma Physics Lab.; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). Apr 1979. Contract AC02-76CH03073. Translation of IAE-2978, 1978. 34p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85017016.

Computations of energy balance are presented for a tokamak with hot atom beam injection. Atom ionization, trapping of generated ions and energy transfer to plasma are examined. Energy loss in charge exchange is considered. Relationships are presented between the temperature and the injection power, the plasma density and other parameters. Possibilities are discussed for obtaining a collisionless ion regime.

45823 (PPPL-TRANS—128) Ion-cyclotron heating with low dissipation in T-10 tokamak. Alikaev, V.V.; Vdovin, V.L.; Lisenko, S.E.; Chesnokov, A.V.; Shapotkovskii, N.V. (Princeton Univ., NJ (USA). Plasma Physics Lab.; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). Feb 1979. Contract AC02-76CH03073. Translation source information not available . 33p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85017018.

This paper examines the problem of plasma heating in the T-10 tokamak using the second harmonic of ion-cyclotron frequency $\omega = 2\omega$/sub Bi/. There are several promising methods for heating in this frequency range, for example ion-ion hybrid resonance. We will, however, concentrate our attention in this paper on the study of fast wave heating methods under conditions of low dissipation using resonance pumping. Multi-mode character of plasma resonator is a characteristic feature of such a large machine with a dense plasma. It will be shown, therefore, that a comparatively small absorption spans over a majority of modes; this simplifies considerably the matching of the excitation device to the generator under the conditions of changing electron density. An important consequence of mode spanning at low dissipation is the localization of electromagnetic energy under the exciter.

45824 (CONF-830795—10) Determination of the global recombination rate coefficient for the ISX-B Tokamak. Langley, R.A.; Howe, H.C. (Oak Ridge National Lab., TN (USA)). 1983. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016362.

From Symposium on energy removal and particle control and toroidal fusion devices; Princeton, NJ, USA (26 Jul 1983).

The global recombination rate coefficient for hydrogen has been measured for the ISX-B tokamak vacuum vessel for various surface conditions. The measurements were performed by observing the rate of decrease of gas pressure in the vessel during a glow discharge. The parameters of the glow discharge and the complete experimental method are described. Previously published analytic and numerical models are used for data analysis. The effects of surface contamination on the results are described. For "unclean" wall conditions σk/sub r/ = 1.8 x 10^{-38} cm^4/atom.s at 296 K and increases to σk/sub r/ = 4.4 x 10^{-38} cm^4/atoms.s for "clean" conditions and remains constant until subsequent exposure to air.

45825 (CONF-840614—106) Configuration review of TFCX design options. Brown, T.G. (Oak Ridge National Lab., TN (USA)). 1984. Contract AC05-84OR21400. 6p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016381.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

As part of the preconceptual design effort of the Tokamak Fusion Core Experiment (TFCX), several candidate design options have been explored in order to identify a preferred option that will be developed in further detail during the conceptual design phase

of the TFCX program. The development of the TFCX concepts has been a collaborative effort between the Princeton Plasma Physics Laboratory (PPPL) and the Fusion Engineering Design Center (FEDC) with broad community input. The design options being considered include an all-superconducting design, a superconducting/copper toroidal field (TF) hybrid design, and several different all-copper configurations.

45826 **(CONF-850610—37) Compact DT fusion spherical tori at modest fields.** Peng, Y.K.M. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016415.

From Annual meeting of the American Nuclear Society; Boston, MA, USA (9 Jun 1985).

A spherical torus is obtained by retaining only the indispensable components on the inboard side of a tokamak plasma, such as a cooled, normal conductor that carries current to produce a toroidal magnetic field. The resulting device features an exceptionally small aspect ratio (typically 2-to-1 elongation), and ramp-up and maintenance of the plasma current primarily by noninductive means. The tokamak plasma takes on the spherical shape with a modest hole through the center, suggesting the name of spherical torus. This paper reviews the initial assessments of near-term DT fusion devices based on the spherical torus concept.

45827 **(CONF-850610—41) Fusion materials activation characteristics as related to waste disposal requirements.** Conn, R.W.; Wiffen, F.W. (California Univ., Los Angeles (USA). School of Engineering and Applied Science; Oak Ridge National Lab., TN (USA)). 2 Jan 1985. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016411.

From Annual meeting of the American Nuclear Society; Boston, MA, USA (9 Jun 1985).

Lower activation materials for fusion reactors are technically possible, may be important to the public acceptance of fusion energy, and are a main goal of fusion energy development. Actual levels of radioactivation in a fusion reactor will depend on the material itself and on its alloying constituents and impurity content. The equilibrium activation level and post-shutdown decay rates affect three primary areas: long term waste material disposal; reactor maintainability, specifically, the prospects for limited hands-on or contact maintenance; and reactor safety. Goals relating to each of these three areas are proposed and used to develop four particular categories which classify both reactors and materials.

45828 **(CONF-850708—2) Simple procedure for establishing ignition conditions in tokamaks. Draft.** Uckan, N.A.; Sheffield, J. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85016149.

From Workshop on tokamak start-up - problems and scenarios related to the transient phases of long-burn operations; Erice, Italy (14 Jul 1985).

Handwritten manuscript.

A method of establishing ignition conditions and plasma operating regimes over large regions of parameters space (R_0/a, b/a, aB_0^2/q, etc.) under various physics assumptions (chi/sub e/, chi/sub i/, q/sub psi/, β/sub crit/, n/sub crit/, etc.) with a simple systematic global model is presented. Contour plots of ignition, supplementary power, and plasma heating and operating windows are generated. These are then used to analyze the potential physics design space, operating regimes, and plasma performance characteristics of small ($R_0 \sim 1$ to 2 m), high field ($B_0 \sim 8$ to 13 T) ignition experiments that are currently being considered by the US Tokamak Ignition Design Studies.

45829 **(CONF-850813—1) Elastic and inelastic surface effects on ion penetration and the resulting sputtering and backscattering.** Hassanein, A.M.; Smith, D.L. (Argonne National Lab., IL (USA)). 1985. Contract W-31-109-ENG-38. 16p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016604.

From 11. international conference on atomic collisions in solids; Washington, DC, USA (4 Aug 1985).

The computer code ITMC (Ion Transport in Materials and Compounds) has been developed to study in detail the transport of charged particles in solid materials and surface related phenomena such as sputtered atoms and backscattered ions. The code is based on Monte Carlo methods to follow the path and the damage produced by the charged particles in three dimension as they slow down in target materials. Single-element targets as well as alloys with possible different surface and bulk compositions or with layered structures of different materials can be used. Various models developed to calculate the inelastic energy losses with target electrons can be used in the code. Most known interatomic potentials can also be used to calculate the elastic energy losses. The major advantages of the code are its ability and flexibility to use and compare various models of elastic and inelastic energy losses in any target with different compounds and different surface and bulk composition.

45830 **(CONF-8505175—3) Modular tokamak reactor configuration.** Thomson, S.L.; Bussell, G.T.; Brown, T.G. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016399.

From TPSS meeting; Atlanta, GA, USA (15 May 1985).

The viewgraphs presented at this meeting on modular tokamaks are given. (MOW)

45831 **(CONF-8505175—4) Economy of scale.** Thomson, S.L.; Keeton, D.C. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016396.

From TPSS meeting; Atlanta, GA, USA (15 May 1985).

Viewgraphs are given relating the cost of electricity of coal, nuclear, and fusion power plants. (MOW)

45832 (DOE/ER—0113/4, pp 2-10) **Property studies of solid tritium breeding materials.** Johnson, C.E.; Fischer, A.K.; Tam, S.W.; Leibowitz, L.; Liu, Y.Y. (Argonne National Lab., IL). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this work is to evaluate the potential of lithium containing ceramic materials to serve as tritium breeding materials for D-T fusion reactors. This activity focuses on the collection and assessment of thermodynamic transport and thermophysical properties data on the candidate materials Li_2O, $LiAlO_2$, Li_4SiO_4, and Li_2ZrO_3. Studies include determining phase relationship, assessing transport behavior, measuring heats of adsorption/desorption, and determining chemical and thermal stability.

45833 (DOE/ER—0113/4, pp 11-15) **TRIO experiment.** Clemmer, R.G.; Scandora, A.E.; Finn, P.A.; Misra, B.; Billone, M.C.; Fischer, A.K.; Tam, S.W.; Johnson, C.E. (Argonne National Lab., IL). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this work is to test in-situ tritium recovery and heat transfer performance of a miniaturized solid breeder blanket. The TRIO experiment involves the irradiation of γ-$LiAlO_2$ under well defined conditions of temperature, neutron flux, sweep gas flow, and solid configuration. Tritium in its various chemical forms is moved by a sweep gas to an analytical train that measures and identifies the composition of the effluent. The predominant form of tritium observed in the sweep gas was the non-condensible, or HT form. At the completion of the experiment less than 0.1 wppm tritium was found in the solid.

45834 (DOE/ER—0113/4, pp 16-20) **FUBR-1A experimental results.** Hollenberg, G.W.; Baldwin, D.E. (Westinghouse Hanford Co., Richland, WA). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this effort was to obtain data on the performance of lithium ceramic materials during fast neutron irradia-

tion in support of solid breeder blanket designs. Irradiation results on Li_2O, $LiAlO_2$, Li_4SiO_4 and Li_2ZrO_3 have been obtained after irradiation in the fast neutron flux of EBR-II. Pellets of these materials were characterized by neutron radiography, mensuration, burnup measurement, helium retention measurement, and tritium retention measurement. The wide variations in retained helium, retained tritium and swelling measured in this experiment establishes the differences to be expected in these materials when used in solid breeder blankets.

45835 (DOE/ER—0113/4, pp 26-28) **Microstructural damage in neutron-irradiated spinel.** Tucker, D.S.; Zocco, T.; Parker, C.A.; Hobbs, L.W.; Russell, K.C. (Los Alamos National Lab., NM). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this work was to evaluate the damage microstructure of two forms of polycrystalline spinel, and relate the results to observations of strength changes in these ceramics and in a single-crystal form of this material. Two types of polycrystalline $MgAl_2O_4$ were irradiated to 2 x 10^{26} n/m^2, E > 0.1 MeV at 680 and 815 K. TEM examination revealed dense arrays of dislocation loops and denuded grain boundaries. These results are correlated with previously obtained strength data.

45836 (DOE/ER—0113/4, pp 29-32) **Facility for measuring microwave properties of radiation - damaged ceramics for RF windows and other fusion applications.** Frost, H.M. (Los Alamos National Lab., NM). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this work was to apply state-of-the-art hardware to measuring, both within waveguide and in free space, the dielectric constants and loss tangents at millimeter-wave frequencies of ceramics and other materials, especially those with low loss before and after fast-neutron irradiation. In response to materials needs connected with electron cyclotron resonance heating (ECRH) in magnetic fusion reactors, the facility at Los Alamos for electrical and dielectric properties measurements on materials is being upgraded to include a capability in the millimeter-wave region. Three chief-candidate hardware systems accordingly have been identified for measuring dielectric constants and loss tangents over at least a 10 GHz portion of the W-band (75-110 GHz). All three can process microwaves transmitted through materials, with loss tangents in the range of 0.001 to 0.0001. This includes the least accurate of the three systems, as confirmed by preliminary data on an unirradiated BeO matchstick specimen inserted within a WR-10 waveguide section in that system. Specimens of both alumina and beryllia have been irradiated in the EBR-II reactor to a fluence of 1 x 10^{26} n/m^2 (E > 0.1 MeV) at 385°C and are now available for testing.

45837 (DOE/ER—0113/4, pp 38-39) **Mechanical properties of candidate insulators for fusion reactors.** Tucker, D.S. (Los Alamos National Lab., NM). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this study was to determine the effects of neutron irradiation at 4.2 K on epoxy and polyimide insulators, and to compare these effects with those from gamma-irradiations at the same temperatures and in the same materials. Several epoxy- and polyimide-based materials were neutron-irradiated to a total dose of 2.6 x 10^{21} n/m^2 En > 0.1 MeV at 4.2 K in IPNS-II. Mechanical strength data revealed that only G-10CR exhibited significant degradation when tested at 77 K.

45838 (DOE/ER—0113/4, pp 40-44) **Strengths of unirradiated thin sheet organic laminate insulators loaded perpendicular to the laminations.** Becker, H.; Marston, P.G.; Montgomery, D.B.; Schmunk, R.J.; Tognarelli, D. (Massachusetts Institute of Technology, Cambridge). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this study was to determine the strengths of irradiated organic insulators and to construct a loading device for inpile strength determination. Thin disks of polyimide/S2 glass (PS2) laminate were irradiated to high neutron/gamma doses and were compressed perpendicular to the surface at room temperature. Two titanium loaders were transmitted to ORNL for initial measurements of radioactivity and gamma heating. Dose levels were high enough to reveal fall-off in fatigue life.

45839 (DOE/ER—0113/4, pp 46-50) **Progress on the establishment of a national low-temperature neutron irradiation facility (NLTNIF).** Coltman, R.R. Jr.; Klabunde, C.E.; Young, F.W. Jr. (Oak Ridge National Lab., TN). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this study was to assist in the design, construction, and operation of a National Low-Temperature Neutron Irradiation Facility (NLTNIF) for use in basic research and fusion magnet materials development. In May, 1983 the Division of Materials Sciences, Office of Basic Energy Sciences of the Department of Energy authorized the establishment of a National Low-Temperature Neutron Irradiation Facility (NLTNIF) at ORNL's Bulk Shielding Reactor (BSR). The NLTNIF, which will be available for qualified experiments at no cost to users, will provide a combination of high radiation intensities and special environmental and testing conditions that have not been previously available in the US. Since the DOE authorization, work has proceeded on the design and construction of the new facility without interruption. The present status of the development of NLTNIF is described and, for the information of new candidate users, a recounting of the major specifications and capabilities is also given.

45840 (DOE/ER—0113/4, pp 51-57) **Materials and test methods.** Kase, M.B. (National Bureau of Standards, Washington, DC). May 1985. NTIS, PC A04/MF A01. File Number DE85013529.

In Seventh annual progress report on special purpose materials for magnetically confined fusion reactors.

The objective of this study was to provide, in cooperation with ORNL and LANL, specimens required for studies to develop organic insulators having the cryogenic neutron irradiation resistance required for MFE systems utilizing superconducting magnetic confinement. To develop test methods and analytical procedures for assessing radiation damage. To stimulate and participate in international cooperation directed toward accomplishing these objectives. The system for producing uniaxially reinforced, 3-4 mm (0.125 in) diameter rod specimens has been refined and validated by production of excellent quality specimens using liquid-mix epoxy resin systems. The methodology is undergoing further modification to permit use of hot-melt epoxy and polyimide resin systems as will be required for the experimental program to be conducted in the NLTNIF reactor at ORNL. Preliminary studies indicate that short beam and torsional shear test methods will be useful in evaluating radiation degradation. Development of these and other applicable test methods are continuing. A cooperative program established with laboratories in Japan and in England has resulted in the production and testing of specimens having an identical configuration.

45841 (DOE/ET/52040—T22) **CTR plasma engineering studies. Annual progress report, 1 December 1984-30 November 1985.** Miley, G.H. (Illinois Univ., Urbana (USA). Fusion Studies Lab.). 1985. Contract AC02-76ET52040. 166p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE85016582.

Work under this project is focused on plasma engineering developments in support of fusion reactor studies. The work described in this annual progress report covers a variety of topics ranging from plasma transport modelling for compact tori to radiation heating of the first wall in a fusion device. Sections 2 and 3 decribe computer codes developed for use with field-reversed configurations such as spheromaks and field-reversed mirrors. Section 4 presents an evaluation of the feasibility of heating a RFP-type reactor to ignition with ohmic current input alone. Sections 5 and 6 describe new work that has been initiated on optimal control theory for fusion reactors. Sections 7 to 9 discuss recent results on alpha-

particle transport, instabilities, and diagnostics. In the final section, methods for analysis of the poloidal variation in the thermal wall loading of a tokamak reactor are discussed and some typical results are presented.

45842 **(ECN—162) FURNACE; a toroidal geometry neutronic program system method description and users manual.** Verschuur, K.A. (Netherlands Energy Research Foundation, Petten). Dec 1984. 92p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85702040.

Work partially supported by the European Communities.

The FURNACE program system performs neutronic and photonic calculations in 3D toroidal geometry for application to fusion reactors. The geometry description is quite general, allowing any torus cross section and any neutron source density distribution for the plasma, as well as simple parametric representations of circular, elliptic and D-shaped tori and plasmas. The numerical method is based on an approximate transport model that produces results with sufficient accuracy for reactor-design purposes, at acceptable calculational costs. A short description is given of the numerical method, and a user manual for the programs of the system: FURNACE, ANISN-PT, LIBRA, TAPEMA and DRAWER is presented.

45843 (INIS-mf—9306, pp L23) **Muon-catalyzed fusion with high-density d-t gas mixtures.** Caffrey, A.J.; Anderson, A.N.; Jones, S.E.; Walter, J.B.; Watts, K.D. (Idaho National Engineering Lab., Idaho Falls (USA)); Bradbury, J.N.; Gram, P.A.M.; Leon, M.; Maltrud, H.R.; Paciotti, M.A. (Los Alamos National Lab., NM (USA)). 1984. 45846 **(INIS-mf—9749) Surface generation of negative hydrogen ion beams.** Bommel, P.J.M. van. (Amsterdam Univ. (Netherlands)). 6 Jun 1984. 184p. NTIS (US Sales Only), PC A09/MF A01. File Number DE85781544.

Includes Dutch summary; 180 refs.; 52 figs.; 4 tabs.

This thesis describes investigations on negative hydrogen ion sources at the ampere level. Formation of H^- ions occurs when positive hydrogen ions capture two electrons at metal surfaces. The negative ionization probability of hydrogen at metal surfaces increases strongly with decreasing work function of the surface. The converters used in this study are covered with cesium. Usually there are 'surface plasma sources' in which the hydrogen source plasma interacts with a converter. In this thesis the author concentrates upon investigating a new concept that has converters outside the plasma. In this approach a positive hydrogen ion beam is extracted from the plasma and is subsequently reflected from a low work function converter surface.

45847 **(IPP—2/273) Thermomechanical layout of the NET first wall assembly.** Mukherjee, S.B. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Jan 1985. 101p. NTIS (US Sales Only), PC A06/MF A01. File Number DE85751879.

With 62 figs.

The 2D-finite element (FE) method is applied for the NET first wall structure to compute the quasi-harmonic steady-state temperature distribution within the wall and to determine the nonlinear elastic stresses under thermomechanical loads. 26 different cases (as proposed) have been investigated for the structure containing plane wall, grooved wall and thin wall concepts, respectively. The wall's support condition and the nonlinear material and thermal parameters are varied. The computations are carried out once with water coolant and then with high pressure helium coolant. The results are documented in this final report.

45848 **(IPP—6-245) Analytical approximation formulae for hydrogen diffusion in a metal slab.** Pohl, F.; Bohdansky, J. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Dec 1984. 92p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85752082.

This report treats hydrogen diffusion in the first wall of a fusion machine (INTOR, reactor, etc.), taking the thermal load into account. Analytical approximation formulae are given for the concentration and flux density of hydrogen diffusing through a plane metal slab. The re-emission flux, particularly during the dwell time(s) of machine operation, is also described with analytical formulae. The analytical formulae are compared with numerical calculations for steel as first wall material.

45849 **(KFK—3834) Safety aspects of an inertial confinement fusion reactor.** Kessler, G.; Schlechtendahl, E.G. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorentwicklung). Jan 1985. 44p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751900.

Releases into the environment of radioactive materials contained in heavy ion fusion (HIF) reactor plants must be prevented by similar safety design concepts as they are applied to present fission converter (e.g. LWR's) and breeder reactors (LMFBR's). This study is intended to identify significant safety aspects of inertial confinement fusion power plant concepts and to relate them to the more familliar basis of knowledge about the safety and the hazards of other advanced nuclear power reactor systems such as the LMFBR. Needs for safety related research and development specifically for inertial confinement fusion are pointed out.

45850 **(LA-UR—85-2077) Design and performance of large area monolithic electron guns for the Aurora KrF laser system.** Kang, M.; Rosocha, L.A.; Romero, V.O.; Van Haaften, F.W.; Brucker, J.P. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 14p. (CONF-850616—68). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014112.

From 5. IEEE pulsed power conference; Washington, DC, USA (10 Jun 1985).

Aurora is an inertial confinement fusion laser system using optical angular multiplexing and a chain of four cold cathode electron beam driven KrF laser amplifiers to produce 10 to 20 kJ of optical energy.

45851 **(LA-UR—85-2245) Aurora project: optical design for a kilojoule class KrF laser.** Hanlon, J.; McLeod, J.; Sollid, J.E.; Horn, W. III; Carmichael, R.; Kortegaard, B.; Woodfin, G.; Rosocha, L.. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 7p. (CONF-850345—26). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014078.

From Southwest conference on optics; Albuquerque, NM, USA (4 Mar 1985).

Aurora is a 248-nm, 10-kilojoule laser system being built at Los Alamos National Laboratory to demonstrate the feasibility of

large KrF laser systems for laser fusion. It was designed as a test bed to demonstrate: (1) efficiet energy extraction at 248 nm; (2) an angularly multiplexed optical system that is scaleable to large system designs; (3) the control of parasitics and ASE (amplified spontaneous emission); (4) long path pulse propagation at uv wavelengths; (5) alignment systems for multibeam systems; and (6) new or novel approaches to optical hardware that can lead to cost reduction on large systems. In this paper only issues pertinent to the optical system are addressed. First, a description of the entire system is given. The design constraints on the optical system are explained, concurrent with a discussion of the final design. This is followed by a very brief discussion of coatings; in particular, the use of sol-gels for antireflection coatings is presented.

45852 **(LA-UR—85-2351) Installation alignment of a multi-beam ICF target illumination system.** Bauke, W.; Stahl, D.B. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 8p. (CONF-850345—30). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015677.

From Southwest conference on optics; Albuquerque, NM, USA (4 Mar 1985).

Target illumination systems for inertial confinement fusion (ICF) experiments require precise alignment of a multitude of mirrors, usually spherically arranged around the ICF target. The mechanical support structure for these mirrors generally consists of a large space frame with many voids. This makes direct alignment or boresighting impossible, since alignment instruments and references cannot be placed at the coordinate centers representing the mirror arrays or focal points. Nevertheless, the structural members must be accurately aligned during the assembly phase, to provide the focusing precision required by the completed illumination system. This paper describes the techniques used to assemble and align the Antares Laser space frame where a total of 48 mirrors fold and focus 24 laser beams onto the ICF target, within a 7.3 meter space frame. The alignment procedures described use optical tooling and test techniques supplemented by surveying instruments and auxiliary devices, as required by the unique geometry of the space frame.

45853 **(LA-UR—85-2485) Measurement of Faraday rotation in twisted optical fiber using rotating polarization and analog phase detection.** Chandler, G.I.; Forman, P.R.; Jahoda, F.C. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 10p. (CONF-850887—17). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015704.

From SPIE international technical symposium on optical and electro-optical engineers; San Diego, CA, USA (18 Aug 1985).

We demonstrated phase modulation of rotating linearly polarized light by current-induced Faraday rotation in a single mode optical fiber and used the technique to measure the current in ZT-40M, a Reversed-Field Pinch. We have also demonstrated the practicality of using twisted sensing fiber to overcome the problems associated with linear birefringence.

45854 **(LBL—19501) Heavy ion fusion half year report, October 1, 1984-March 30, 1985.** (Lawrence Berkeley Lab., CA (USA)). Jun 1985. Contract AC03-76SF00098. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85017257.

Summaries of research are given for each of the following experiments: (1) MBE-4: a four-beam induction linac experiment, (2) performance of the MBE-4 injector, (3) design procedure for acceleration and bunching in an induction linac, (4) longitudinal dynamics of MBE-4, (5) transverse beam dynamics, (6) envelope functions of high-current beam, (7) electrostatic energy analyzer, (8) longitudinal beam control, (9) a capacitive beam-charge monitor for SBTE, (10) materials R and D, (11) simulations of Robertson's lens, and (12) SBTE high σ_0 high-current stability limits. (MOW)

45855 **(LBL—19529) LBL neutralized beam focusing experiment.** Krafft, G.A.; Kim, C.H.; Smith, L. (Lawrence Berkeley Lab., CA (USA)). May 1985. Contract AC03-76SF00098. 6p. (CONF-850504—240). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016564.

From Particle accelerator conference; Vancouver, Canada (13 May 1985).

An intense neutralized Cs^{+1} beam has been focused by an electrostatic polarization field induced by a solenoidal magnetic field of 10-25 gauss. This report describes the experiment and compares the results with the predictions of an analytic linearized fluid model and a particle-in-cell simulation which treats the motion of the warm electrons in detail.

45856 **(LBL—19647) Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel.** Tiefenback, M.G.; Keefe, D. (Lawrence Berkeley Lab., CA (USA)). May 1985. Contract AC03-76SF00098. 6p. (CONF-850504—241). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016636.

From Particle accelerator conference; Vancouver, Canada (13 May 1985).

The Single Beam Transport Experiment at LBL consists of 82 electrostatic quadrupole lenses arranged in a FODO lattice. Five further lenses provide a matched beam from a high-current high-brightness cesium source for injection into the FODO channel. We call the transport conditions stable if both the emittance and current remain unchanged between the beginning and end of the channel, and unstable if either the emittance grows or the current decreases because of collective effects. We have explored the range of single-particle betatron phase advance per period from $\sigma_0 = 45^0$ to 150^0 to determine the stability limits for the space-charge depressed phase advance, σ. No lower limit for σ (down to 7^0) has been found at $\sigma_0 = 60^0$, whereas limits have clearly been identified and mapped in the region of σ_0 above 90^0.

45857 **(PPPL—2224) Confinement studies in TFTR.** Murakami, M.; Arunasalam, V.; Bell, J.D.; Bell, M.G.; Bitter, M.; Blanchard, W.R.; Boody, F.; Boyd, D.; Bretz, N.; Bush, C.E. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1985. Contract AC02-76CH03073. 9p. (CONF-850310—116). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015305.

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The paper describes the present (end of February 1985) status of the plasma confinement studies in the TFTR tokamak with emphasis on those with neutral beam injection (NBI). Recent improvements in the device capabilities have substantially extended operating parameters: B/sub T/ increased to 4.0 T, I/sub p/ to 2.0 MA, injection power (P/sub b/) to 5 MW with H^0 or D^0 beams anti n/sub e/ to 5 x 10^{19} m^{-3}, and Z/sub eff/ reduced to 1.4. With ohmic heating (OH) alone, the previously established scaling for gross energy confinement time (tau/sub E/ = anti n/sub e/q) has been confirmed at higher I/sub p/ and B/sub T/, and the maximum tau/sub E/ of 0.4 sec has been achieved. With NBI at P/sub b/ substantially (by factor >2) higher than P/sub OH/, excellent power and particle accountability have been established. This suggests that the less-than-expected increase in stored energy with NBI is not due to problems of power delivery, but due to problems of confinement deterioration. tau/sub E/ is observed to scale approximately as I/sub p/ P/sub b//sup -0.5/ (independent of anti n/sub e/), consistent with previous L-mode scalings. With NBI we have achieved the maximum tau/sub E/ of 0.2 sec and the maximum T/sub i/(o) of 4.4 keV in the normal operating regime, and even higher T/sub i/(o) in the energetic-ion regime with low-n/sub e/ and low-I/sub p/ operation.

45858 **(UCID—20166-Vol.5) Special topics reports for the reference tandem mirror fusion breeder. Volume 5. Neutronic issues and optimization.** Lee, J.D.; Bandini, B.R. (Lawrence Livermore National Lab., CA (USA)). 29 Mar 1985. Contract W-7405-ENG-48. 43p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85017149.

More rigorous nuclear analysis, including the treatment of resonance self-shielding effects coupled with an optimization procedure, has resulted in improved performance of the Be/Li/Th blanket. Net U-233 breeding ratio has increased 36% (to 0.84) while at a U/Th ratio of 0.25 a/o energy multiplication has increased 12% (to 2.1) compared with earlier results.

45859 **(UCID—20274-Vol.1) Summary of TMX-U results, 1984. Volume 1.** Simonen, T.C. (ed.). (Lawrence Livermore National Lab., CA (USA)). 14 Dec 1984. Contract W-7405-ENG-48. 522p. NTIS, PC A22/MF A01; 1; GPO Dep. File Number DE85017286.

This progress report describes results from the upgraded Tandem Mirror Experiment (TMX-U), which began in May 1982, following the completion and checkout of modifications to the TMX facility. These modifications allowed us to carry out proof-of-principle experiments on the thermal-barrier method of tandem mirror end-plugging. As defined in the TMX-U proposal, the physics objectives of TMX-U were to: (1) Investigate a complete tandem-mirror thermal-barrier system: (a) demonstrate end-plug microstability, (b) investigate magnetohydromic MHD stability, (c) develop electron-cyclotron resonance heating (ECRH), create mirror-confined end-cell electrons, and generate end-plug plasma potentials, and (d) demonstrate the electron temperature gradient across the thermal barrier; and (2) Improve TMX performance.

45860 **(UCRL—15700-Vol.1) Mirror Fusion Test Facility-B (MFTF-B) axicell configuration: NbTi magnet system. Design and analysis summary. Volume 1.** Heathman, J.H.; Wohlwend, J.W. (General Dynamics Corp., San Diego, CA (USA). Convair Div.). May 1985. Contract W-7405-ENG-48. 408p. NTIS, PC A18/MF A01; 1; GPO Dep. File Number DE85017283.

This report summarizes the designs and analyses produced by General Dynamics Convair for the four Axicell magnets (A1 and A20, east and west), the four Transition magnets (T1 and T2, east and west), and the twelve Solenoid magnets (S1 through S6, east and west). Over four million drawings and specifications, in addition to detailed stress analysis, thermal analysis, electrical, instrumentation, and verification test reports were produced as part of the MFTF-B design effort. Significant aspects of the designs, as well as key analysis results, are summarized in this report. In addition, drawing trees and lists off detailed analysis and test reports included in this report define the locations of the detailed design and analysis data.

45861 **(UCRL—92087) Thin-thick quadrature frequency conversion.** Eimerl, D. (Lawrence Livermore National Lab., CA (USA)). 7 Feb 1985. Contract W-7405-ENG-48. 4p. (CONF-850174—2). NTIS, PC A02. File Number DE85012977.

From Lasers '84; San Francisco, CA, USA (15 Jan 1985).

The quadrature conversion scheme is a method of generating the second harmonic. The scheme, which uses two crystals in series, has several advantages over single-crystal or other two crystal schemes. The most important is that it is capable of high conversion efficiency over a large dynamic range of drive intensity and detuning angle.

45862 **Novette facility: activation and experimental results.** Manes, K.R.; Barr, O.C.; Bliss, E.S. (Lawrence Livermore National Lab., CA (USA)). *Laser and Particle Beams;* **3**: 173-188(May 1985).

From the neodymium glass laser system Novette with two beams of 74 cm diameter and 18 kJ energy per pulse output in the nanosecond range, the design, the steps of the construction, and results of the system are reported. The two beams are synchronized to 5 psec and conversion to green light up to 78% has been realized. Conversion to four times the laser frequency is measured with more than 25% conversion. Simulation and measurement of laser beam properties at several locations permit an analysis to define the final Nova configuration. About half of Novette's experiments were to study short wave length laser-plasma interactions for the then better coupling by inverse bremsstrahlung mechanisms for inertial confinement fusion with laser intensities up to 10^{17}W/cm^2. Experiments were divided between high density implosion research and non-local thermodynamic equilibrium plasma conditions.

45863 **Ponderomotive and thermal filamentation of laser light.** Kruer, W.L. (Lawrence Livermore National Lab., CA (USA)). *Comments on Plasma Physics and Controlled Fusion;* **9**: No. 2, 63-72(Jan 1985).

Ponderomotive and thermal filamentation of laser light are potentially important processes in targets with large regions of underdense plasma. These processes are compared, threshold intensities are estimated, and some possible consequences are discussed.

45864 **Observation of enhanced particle removal rates in pump limiter simulation experiments.** Goebel, D.M.; Conn, R.W. (California Univ., Los Angeles (USA). School of Engineering and Applied Science; California Univ., Los Angeles (USA). Center for Plasma Physics and Fusion Engineering). *Journal of Nuclear Materials;* **128/129**: 249-252(Dec 1984). (CONF-840520—). Contract AA03-76SF00034;AT03-84ER52104.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The performance of particle removal schemes for density and impurity control in tokamaks and mirror machines depends strongly on the plasma parameters and local recycling near the plasma neutralizer plates and gas pumping ducts. The relationship between plasma density, electron temperature, ion energy and gas flow and particle removal rate through a pumping duct located near a plasma neutralizer plate has been experimentally investigated in the steady state plasma device PISCES. Results indicate that initially the particle removal by pumps at the end of the duct is proportional to the plasma flux to the plate. A nonlinear increase in the pumping rate occurs when the ionization mean free path for neutrals from the plate becomes less than the plasma radius. The transition from a transparent to an opaque plasma due to local ionization of the neutrals produced at the neutralizer plate greatly enhances the particle removal rate by recycling of the neutral gas as it flows away from the neutralizer plate or out of the pumping ducts. Parameters were varied to determine the importance of 'ballistic scattering' of higher energy ions from the plate, but no effects were found in these experiments.

45865 **Time-resolved erosion measurements at a reference limiter in ISX-B using laser-induced fluorescence.** Cook, T.B.; King, P.W.; Roberto, J.B.; Stewart, K.A.; Yokoyama, K.E. (Oak Ridge National Lab., TN (USA)). *Journal of Nuclear Materials;* **128/129**: 253-256(Dec 1984). (CONF-840520—). Contract AC05-84OR21400.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Laser-induced fluorescence has been used to measure the density and ionization length of neutral metal atoms released from a reference limiter during plasma discharges in the Impurity Study Experiment (ISX-B) tokamak. A tunable, pulsed laser beam is introduced into the tokamak at the midplane along a major radius and passes in front of a stainless steel reference limiter positioned between the wall and the main limiter radius. Neutral iron atoms released from the limiter are detected by saturation pumping of the ground-state transition at 302 nm, followed by off resonance detection of the resulting fluorescence radiation. The sampling rate is 15 Hz; additional time resolution is provided by overlaying similar discharges with different time synchronization. In ohmic discharges in ISX-B, a nearly constant impurity release rate of 8×10^{14} cm^{-2} s^{-1} occurs during the steady-state part of the discharge, with substantial peaks during the breakdown, rampup, and termination of the shot. Measured ionization lengths are suggestive of particle velocities typical of sputtering. These results are presented with similar data from neutral-beam-heated shots.

45866 **Ergodic magnetic limiter experiments on TEXT with a 7/3 resonance.** DeGrassie, J.S.; Ohyabu, N.; Brooks, N.H. (GA Technologies, Inc., San Diego, CA (USA)); Gentle, K.W.; Bengston, R.; Bravenec, R.; Hodge, W.; Kochanski, T.; Nelin, K.; Phillips, P. *Journal of Nuclear Materials;* **128/129**: 266-270(Dec 1984). (CONF-840520—). Contract AC03-84ER51044.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The ergodic magnetic limiter coils on TEXT have been reconfigured to produce the primary helical perturbation resonance at $m = 7/n = 3$. The experiments continue to demonstrate that the weak resonant perturbations modify the edge conditions in keeping with model predictions. We observe a reduction in the intrinsic impurity levels accompanying the helical current pulse, presumably the result of a reduction in the electron temperature in the edge.

Heat follows the perturbed field lines to the limiter, generating heat load patterns which reflect the geometry of a magnetic island-limiter intersection. A strong spatial modulation of the electron density in the scrape-off-layer also reflects the helical mode structure.

45867 **Means of varying conditions in the expanded boundary divertor without affecting energy confinement.** Burrell, K.H.; Ohyabu, N.; Chase, R.; Kahn, C.; Petrie, T. (GA Technologies, Inc., San Diego, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 275-279(Dec 1984). (CONF-840520—). Contract AC03-84ER51044.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Expanded boundary divertor discharges in Doublet III have shown a significant enhancement in confinement-relative to limiter discharges with similar plasma density, current, toroidal field and neutral beam heating power. This improvement is insensitive to divertor density, recycling rate and power radiated from the divertor. Accordingly, it may be possible to exploit the improved divertor confinement in a fusion reactor while independently adjusting conditions in the divertor to satisfy reactor engineering constraints.

45868 **Plasma-materials interactions during RF experiments in tokamaks.** Cohen, S.A.; Bernabei, S.; Budny, R.; Chu, T.K.; Colestock, P.; Hinnov, E.; Hooke, W.; Hosea, J.; Hwang, D.; Jobes, F. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **128/129**: 280-291(Dec 1984). (CONF-840520—). Contract AC02-76CH03073.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Plasma-materials interactions studied in recent ICRF heating and lower hybrid current drive experiments are reviewed. The microscopic processes responsible for impurity generation are discussed. In ICRF experiments, improvements in machine operation and in antenna and feedthrough design have allowed efficient plasma heating at RF powers up to 3 MW. No significant loss of energy from the plasma core due to impurity radiation occurs. Lower hybrid current drive results in the generation and maintenance of hundreds of kiloamperes of plasma current carried by suprathermal electrons. The loss of these electrons and their role in impurity generation are assessed. Methods to avoid this problem are evaluated.

45869 **Design and analysis of a low-edge-temperature divertor for INTOR.** Brooks, J.N.; Mattas, R.F.; Hassanein, A.M. (Argonne National Lab., IL (USA). Fusion Power Program); Baskes, M.I. (Sandia National Labs., Livermore, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 400-406(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

A low edge temperature regime has been proposed for the INTOR divertor in order to minimize erosion on the collector plate. We have examined the design and lifetime issues of a divertor plate operating in such a regime. These issues include the choice of materials, erosion due to sputtering and disruptions, thermal response, and tritium permeation. We have concluded that a tungsten-coated, copper substrate plate offers the possibility of low erosion coupled with good thermal properties. However, there are many unresolved issues with this and other plate configurations. These issues include the transfer of first wall sputtered material to the plate, tritium permeation into the coolant, and mechanical problems such as radiation swelling and embrittlement.

45870 **Tokamak pump limiters.** Conn, R.W. (California Univ., Los Angeles (USA). School of Engineering and Applied Science; California Univ., Los Angeles (USA). Center for Plasma Physics and Fusion Engineering). *Journal of Nuclear Materials;* **128/129**: 407-417(Dec 1984). (CONF-840520—). Contract AA03-76SF00034;AS03-80ER52062.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Recent experiments with a scoop limiter without active internal pumping have been carried out in the PDX tokamak with up to 6 MW of auxiliary neutral beam heating. Experiments have also been performed with a rotating head pump limiter in the PLT tokamak in conjunction with RF plasma heating. Extensive experiments have been done in the ISX-B tokamak and first experiments have been completed with the ALT-I limiter in TEXTOR. The pump limiter modules in these latter two machines have internal getter pumping. Experiments in ISX-B are with ohmic and auxiliary neutral beam heating. The results in ISX-B and TEXTOR show that active density control and particle removal is achieved with pump limiters. In ISX-B, the boundary layer (or scrape-off layer) plasma partially screens the core plasma from gas injection. In both ISX-B and TEXTOR, the pressure internal to the module scales linearly with plasma density but in ISX-B, with neutral beam injection, a nonlinear increase is observed at the highest densities studied. Plasma plugging is the suspected cause. Results from PDX suggest that a regime may exist in which core plasma energy confinement improves using a pump limiter during neutral beam injection. Asymmetric radial profiles and an increased edge electron temperature are observed in discharges with improved confinement. The injection of small amounts of neon into ISX-B has more clearly shown an improved electron core energy confinement during neutral beam injection. While carried out with a regular limiter, this 'Z-mode' of operation is ideal for use with pump limiters and should be a way to achieve energy confinement times similar to values for H-mode tokamak plasmas. The implication of all these results for the design of a reactor pump limiter is described.

45871 **ISX-JET beryllium limiter experiment.** Edmonds, P.H.; Mioduszewski, P.K.; Roberto, J.B. (Oak Ridge National Lab., TN (USA)); Watson, R.D.; Smith, M.F. (Sandia National Labs., Albuquerque, NM (USA)). *Journal of Nuclear Materials;* **128/129**: 422-424(Dec 1984). (CONF-840520—). Contract AC05-84OR21400;AC04-76DP00789.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

A description is given of an experiment that has been designed for the ISX-B tokamak at the Oak Ridge National Laboratory using beryllium as the primary plasma limiter.

45872 **High energy and particle confinement times in PDX scoop discharges.** Budny, R.; Bol, K.; Fonck, R.; Goldston, R.; Grek, B.; Heidbrink, W.; Heifetz, D.; Johnson, D.; Kaita, R.; Kaye, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **128/129**: 425-429(Dec 1984). (CONF-840520—). Contract AC02-76CH03073.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Scoop limited discharges in PDX with neutral beam heating achieved energy and particle confinement times higher than those inferred from similar poloidal rail limiter discharges. We present transport simulations using TRANSP and BALDUR and neutral simulations using DEGAS. Large neutral densities and ionization rates localized near the scoop are inferred. Thermal neutral ionization increases the edge electron density substantially, resulting in a flattened density profile. Fueling from the scoop limiter is deeper than from simple limiters.

45873 **PLT rotating pumped limiter.** Cohen, S.A.; Budny, R.V.; Corso, V.; Boychuck, J.; Grisham, L.; Heifetz, D.; Hosea, J.; Luyber, S.; Loprest, P.; Manos, D. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **128/129**: 430-433(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

A limiter with a specially contoured front face and the ability to rotate during tokamak discharges has been installed in a PLT pump duct. These features have been selected to handle the unique particle removal and heat load requirements of ICRF heating and lower-hybrid current-drive experiments. The limiter has been conditioned and commissioned in an ion-beam test stand by irradiation with 1 MW power, 200 ms duration beams of 40 keV hydrogen ions. Operation in PLT during ohmic discharges has proven the ability of the limiter to reduce localized heating caused by energetic electron bombardment and to remove about 2% of the ions lost to the PLT walls and limiters.

45874 Initial ALT-I pump limiter studies on TEXTOR. Pontau, A.E.; Guthrie, S.E.; Malinowski, M.E.; Ver Berkmoes, A.A.; Whitley, J.B.; McDonald, J.M.; Watson, R.D.; Gauster, W.B. (Sandia National Labs., Livermore, CA (USA); Sandia National Labs., Albuquerque, NM (USA)); Campbell, G.A. *Journal of Nuclear Materials;* **128/129**: 434-439(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The ALT-I pump limiter has been used to control the fueling and recycling characteristics of TEXTOR during stable, reproducible tokamak discharges. The module has been operated in three modes: (1) normal limiter, with no particle collection, (2) particle scoop, with a maximum proportional 2 x 10^{-3} Torr pressure rise in the 700 l unpumped collection chamber, and (3) pump limiter, with up to proportional 10 000 l/s pumping speed and particle removal rates of up to 6 x 10^{20}/s. In a comparison of operation in modes (1) and (3) using identical gas fueling programs, the total core electron number decreased by as much as 50%. The effective TEXTOR particle confinement time, tausub(p)sup(*) = tausub(p)/(1-R), was decreased by a similar ratio. Within the throat region, during typical operation, electron densities and temperatures were 6 x 10^{11}-2 x 10^{13}/cm^3 and 15-30 eV. These conditions are representative of an operating regime in which there is high reionization of neutrals, but no change in incoming plasma parameters in the throat region. Energetic particles near the deflector plate were observed. During a gradual insertion of TiC-coated ALT-I beyond the stainless steel TEXTOR main limiters, the density of Ti in the plasma increased to a level similar to those of Cr and Fe. The gas injection fueling efficiency while puffing hydrogen directly into the plasma at the pump limiter tangency point was measured to be >0.9. These results are discussed in conjunction with measurements of particle flow within ALT-I and other plasma diagnostics to characterize pump limiter operation on TEXTOR.

45875 Monte Carlo simulation of the ISX pumped limiter. Evans, K. Jr. (Argonne National Lab., IL (USA). Fusion Power Program); Heifetz, D.; Post, D. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Mioduszewski, P.K. (Oak Ridge National Lab., TN (USA)). *Journal of Nuclear Materials;* **128/129**: 452-457(Dec 1984). (CONF-840520—). Contract AC02-76CH03073.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

This paper presents the results of Monte Carlo simulations of the neutral particle transport inside the pumped limiters installed on the ISX Tokamak. An overview is given of both the experiment and the computer code, DEGAS, used for the calculations. Two configurations of the limiters are treated in both the pumped and the unpumped modes. A variety of scrape-off densities and temperatures typical of those observed experimentally are considered. A number of quantities of interest are calculated including the fate of the neutralized particles, the particle confinement time in the chamber, and the recycling at the neutralizer plate as well as the neutral densities, temperatures, and pressures. The calculated pressures are found to be somewhat larger than those measured. The discrepancy is most probably due to uncertainty in the current of ions to the neutralizer plate. The calculations are limited by the inability to include the changes in the plasma parameters due to the neutral processes and by the 2D nature of the code compared with the definitely 3D nature of the limiters. The results and their significance in the understanding of the limiter behavior are discussed.

45876 Big Dee divertor and pump limiter capabilities. Mahdavi, M.A.; Eames, D.; Brown, B.; Davis, L.; Helton, F.J.; Luxon, J.; McKelvey, T.; Stambaugh, R.; Steeger, E.; Taylor, T. (GA Technologies, Inc., San Diego, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 466-469(Dec 1984). (CONF-840520—). Contract AC03-84ER51044.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The Big Dee device will be the first major tokamak to incorporate both divertor and pump limiter particle control techniques. The Big Dee is an upgrade of the Doublet III facility designed to reach reactor grade plasma parameters. The device, presently under construction, is designed to operate at plasma current of Isub(p) <= 5 MA (3.5 MA if diverted), input power of 20 MW, and pulse duration of several seconds with either divertor or pump limiters. The diverted plasmas have a nominal major radius of 167 cm, minor radius of 55 cm, and elongation of 2. The pump limiters have a radial stroke of 50 cm and are compatible with a variety of plasma cross-sections from full size highly elongated dee-shaped plasmas (R_o = 167 cm, a = 67 cm, K = 2) to circular plasmas of reduced minor and major radii.

45877 Surface microanalysis of C+SiC coating on limiter/armor exposed in Doublet III. Hirohata, Y.; Mohri, M.; Yamashina, T. (Hokkaido Univ., Sapporo (Japan). Dept. of Nuclear Engineering); Trester, P.W.; Hopkins, G.R.; Hino, T. (GA Technologies, Inc., San Diego, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 477-480(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Limiter/armor tiles coated with a new C+SiC alloy have been tested in Doublet III. Sections of an exposed tile have been examined with surface microanalysis for compositional changes and impurity concentrations. The major impurity elements observed were Ti, O, Ni, Cr, Al, and Fe, with minor amounts of Cl, Ca, and S. Arc track regions showed low Ti, Ni, and Fe, otherwise the distribution was fairly uniform. Depth profiling of impurities showed impurity diffusion into the coating up to depths ranging from 1000 to 5000 nm.

45878 Effect of a single blade limiter on energetic neutral beam particles in Doublet III. Petrie, T.W.; Armentrout, C.; Burrell, K.H.; Hino, T.; Kahn, C.; Kim, J.; Lohr, J.; Rottler, L.; Schissel, D.; St John, H. (GA Technologies, Inc., San Diego, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 487-492(Dec 1984). (CONF-840520—). Contract AC03-84ER51044.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Energetic beam ion collisions with the main limiter can be a significant power loss process under certain operating conditions in Doublet III. Futhermore, these collisions may cause measurable damage to the limiter itself. Under low current and low toroidal field conditions (e.g., Isub(p) = 290 kA and Bsub(T) = 6.3 kG), 20-38% of the inferred absorbed beam power may be deposited directly on the ion drift side of the limiter by the beam ions. However, for higher plasma current and toroidal fields (e.g., Isub(p) = 480 kA and Bsub(t) = 15 kG), the fraction of inferred absorbed beam power deposited on the limiter is reduced to <10%. Monte Carlo code simulations show that this loss of beam power is primarily a result of the large poloidal and toroidal gyro-orbits of the energetic beam ions. Other factors which may enhance beam ion losses to the limiter are (1) large separation distances between the primary limiter and the (outboard) vacuum vessel wall, and (2) plasma density buildup near the plasma edge during high gas puff operation. In addition, our data suggests enhanced plasma density and recycling near the limiter. This localized density can cause appreciable premature ionizations of the incoming beam neutrals and thus reduce the effective plasma heating of the beamline which is immediately upcurrent of the limiter. The prematurely-ionized beam particles from this adjacent beamline are responsible for much of the damage to the ion drift side of the limiter. We have found that under certain operating conditions (1) the direct beam heating of the limiter is 50% greater and (2) the stored plasma energy is 10% less when the beamline immediately upcurrent of the limiter heats the plasma. Thus, the relative positions of the limiters to the beamlines are important in designing future tokamaks.

45879 Graphite limiter damage due to runaway electrons and abrupt Isub(p) termination in Doublet III. Nishikawa, M. (Mitsubishi Atomic Power Industries, Inc., Tokyo (Japan)); Yokomizo, H.; Kitsunezaki, A. (Japan Atomic Energy Research Inst., Tokai, Ibaraki); McKelvey, T.E.; Taylor, T.S.; Doll, D.; Brook, N.; Seraydarian, R. (GA Technologies, Inc., San Diego, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 493-499(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Two kinds of plasma-related damage, spotty damage and wide area damage, have been photographically recognized on the TiC-coated surface of the new graphite primary limiter in Doublet III. TV and infrared-camera observations revealed the relationship of these damages to the plasma operations. The spotty damage was generated by a single runaway discharge. The runaway electron energy was deposited not only on the surface but also penetrated into the bulk graphite. Thermal analysis showed that runaway electron of 5-6 MeV penetrates into the limiter to approximately 1.5-2.0 cm. Wide area damage was caused by one or more successive discharges which exhibited rapid termination of the plasma current. In this case, the electron energy was deposited only on the limiter surface.

45880 Evaluation of limiter configurations in ZT-40M. Downing, J.N.; Buchenauer, C.J.; Ingraham, J.C.; Krakowski, R.A.; Phillips, J.A.; Watt, R.G. (Los Alamos National Lab., NM (USA)). *Journal of Nuclear Materials;* **128/129**: 517-523(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Three limiter configurations were evaluated in the reversed-field pinch, ZT-40M. A bare graphite mushroom-shaped probe located in a pump port measured changes in the energy flux profiles resulting from three different limiter configurations. The first configuration was a graphite segmented poloidal ring limiter located 90° toroidally upstream from the mushroom probe, and it protruded into the plasma chamber proportional 0.95 cm beyond the bellows. The second configuration consisted of three graphite tiles which were positioned in the bottom of the convolution section immediately upstream from the mushroom probe. These tiles were electrically floating with respect to the metal liner and protruded radially inwards proportional 1.27 cm beyond the bellows. For the third configuration four graphite tiles were placed on each side of the pump port section where the mushroom probe was located. These tiles extended 25 cm in both toroidal directions from the pump port section and protruded proportional 0.95 cm into the plasma region. These tiles were also electrically floating. The introduction of the poloidal ring limiter resulted in the mushroom probe absorbing 28% less energy at the major radial position where the tip of the mushroom was even with the shadow of the liner bellows. The tile limiters produced an additional, but small, reduction in the energy absorbed at this location. The tiles produced an increase in the plasma resistance and radiation late in the discharge. Significant amounts of arcing occurred between the tiles and the liner.

45881 High power ohmic heating experiments with graphite wall protection in OHTE. Jackson, G.; Carlstrom, T.; Curwen, B.; Goforth, R.; Graumann, D.; La Haye, R.; Register, D.; Schaffer, M.; Tamano, T.; Taylor, P. (GA Technologies, Inc., San Diego, CA (USA); Phillips Petroleum Co., San Diego, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 531-533(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

High power ohmically heated toroidal pinch experiments have been performed in the OHTE device. With graphite wall protection, plasma currents of up to 500 kA and high β plasmas with ntau proportional 10^{11} cm^{-3} s have been achieved. In this paper we will describe problems associated with wall heating for high power ohmically heated plasmas, protection of the OHTE metal vacuum liner, and the results of plasma operation with graphite covering one-third of the wall area.

45882 Influence of impurities on the high-temperature sputtering yield of graphite. Roth, J.; Bohdansky, J. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)); Roberto, J.B. (Oak Ridge National Lab., TN (USA)). *Journal of Nuclear Materials;* **128/129**: 534-539(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The influence of near-surface impurities on the enhanced sputtering of graphite near 600°C and above 1000°C has been investigated under various doping conditions. The chemical sputtering yield of methane molecules for 2 keV D^+ ions on graphite at 600°C has been determined for several coverages of Si, Fe, Ni, Ti, Mo, and Au. Graphite samples were pre-deposited with proportional 500 A of a given impurity, and weight loss was monitored in-situ using a vacuum balance while sputtering through the deposited layer. Small amounts of impurities remaining on the surface after prolonged sputtering reduced chemical erosion by 30-50%. The radiation-enhanced sublimation of graphite observed for energetic ion bombardment above 1000°C was investigated during 50 keV Ar sputtering and simultaneous Ti evaporation. For very low surface concentrations of Ti, graphite sputtering increased while for concentrations above 10 at% the yields were significantly reduced. A graphite sample containing 4 at% bulk Si was also investigated and showed greatly reduced chemical erosion at 600°C but no reduction in radiation-enhanced sublimation at 1500°C due to surface enrichment and depletion of Si for the low- and high-temperature irradiation, respectively.

45883 Calculation of molybdenum sputtering from the limiter in Alcator C. Lipschultz, B.; La Bombard, B.; Marmar, E.S.; Pickrell, M.M.; Rice, J. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). *Journal of Nuclear Materials;* **128/129**: 555-558(Dec 1984). (CONF-840520—). Contract AC02-78ET51013.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

A simple one-dimensional model for sputtering from the surface of a molybdenum limiter has been developed. Sources of sputtering included in this model are due to thermal ions and the subsequent self-sputtering that follows. The resultant molybdenum source rates match those calculated based on molybdenum line emission data from the main plasma coupled with an anomalous impurity diffusion coefficient. A review of the source rate dependence on plasma parameters is also included.

45884 Sputtering properties of copper-lithium alloys at reactor-level temperatures and surface erosion rates. Krauss, A.R.; Gruen, D.M.; Lam, N.Q. (Argonne National Lab., IL (USA). Materials Science Div.); De Wald, A.B. (Georgia Inst. of Tech., Atlanta (USA)). *Journal of Nuclear Materials;* **128/129**: 570-576(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Previous experiments on copper-lithium alloys at temperatures up to 250°C and with erosion rates of 0.01-0.1 monolayer/s for 3 keV Ar^+ bombardment have shown that in the electric and magnetic field environment of a magnetic-confinement fusion reactor, it is possible to maintain a lithium overlayer which will significantly reduce the copper erosion rate. We have extended these experiments to the reactor-relevant regime of 350-400°C, with erosion rates approaching one monolayer/s (1.5 keV Ar^+ bombardment at 2.1 x 10^{14}/cm^2 s., normal incidence). By comparison with the lower-flux experiments, it is found that radiation damage effects start to dominate both the surface concentration and depth profile of the lithium. The subsurface region of enhanced lithium concentration is broadened, while the surface concentration is not depleted as rapidly per incident ion as in the low-flux case. The time-dependent lithium depth profile is calculated using a computer code developed at Argonne which includes both Gibbsian segregation and radiation-induced effects. The experimental results are compared with these calculations. It is found that the sputtering behavior of the copper-lithium alloys is highly dependent on the mass and energy spectrum of the incident particles, the sample temperature, subsurface structure, and the partial sputtering yields of the alloy components.

45885 Unipolar arc model. Schwirzke, F. (Naval Postgraduate School, Monterey, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 609-612(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Unipolar arcing occurs when a plasma of sufficiently high electron temperature interacts with a surface. Without any external voltage applied, many electrical micro-arcs burn between the surface and the plasma driven by local variations of the sheath potential with the wall acting as both the cathode and anode. Unipolar arcing represents the most damaging and non-uniform plasma-surface interaction process since the energy available in the plasma

concentrates towards the cathode spots. This causes cratering of the surface. The modified unipolar arc model takes into account the increase of plasma density due to ionization of neutrals released from the cathode spot. The local increase of the plasma pressure above the cathode spot leads to an electric field configuration which drives the arc current and also facilitates the electron return current flow to the surface. The return current area surrounding the arc is by orders of magnitude smaller than previously estimated. The sheath potential in this area approaches zero and the electron return current is given by the electron saturation current. The model also explains the retrograde arc motion observed in Tokamaks.

45886 **Hydrogen trapping, diffusion and recombination in austenitic stainless steels.** Langley, R.A. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.). *Journal of Nuclear Materials;* **128/129**: 622-628(Dec 1984). (CONF-840520—). Contract AC05-84OR21400.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Trapping, diffusion, and recombination of hydrogen in austenitic stainless steels are reviewed. It is suggested that since all of these processes are strongly interdependent and since the measured recombination rates are found to vary four orders of magnitude at any temperature, the data analysis techniques used to date are insufficient. At wo-region diffusion model with surface recombination is proposed in which the surface layer is characterized by a smaller diffusion coefficient than the bulk.

45887 **Low-Z C+SiC alloy coating material for plasma interface applications.** Hopkins, G.R.; Trester, P.W.; Kaae, J.L. (GA Technologies, Inc., San Diego, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 802-811(Dec 1984). (CONF-840520—). Contract AC03-84ER53158.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

A new C + SiC alloy material has been developed for fusion in-vessel components. Limiter/armor tiles coated with this material have been tested for over 16000 plasma shots during routine operation of Doublet III. The performance has been excellent. Simulation tests have shown this C + SiC alloy to be highly resistant to chemical sputtering below 1000°C and to be resistant to damage from thermal shocks. The low Z characteristic is advantageous in reducing plasma energy loss from impurities.

45888 **Correlation of experimental and theoretical results for vaporization by simulated disruption.** Croessmann, C.D.; Kulcinski, G.L. (Wisconsin Univ., Madison (USA). Fusion Engineering Program); Whitley, J.B. (Sandia National Labs., Albuquerque, NM (USA)). *Journal of Nuclear Materials;* **128/129**: 816-821(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Samples of Al, 1100 Al, SS 304, Ni, Mo, and TZM were subjected to a simulated plasma disruption produced by a 25 kV electron beam for times of 100 to 500 ms with an energy flux of 0.5 to 7.0 kJ/cm^2. The net vaporized thickness was measured as a function of absorbed energy density for experimental results and predicted by theoretical models. Agreement was found for the threshold energy density for vaporization and the functional dependence of vaporization on energy density over a wide range of parameters. The usefulness of electron beam experiments to verify and guide the development of vaporization models for high heat flux component design was shown.

45889 **Characterization of impurities deposited on the PDX graphite rail limiter.** Doyle, B.L.; Wampler, W.R. (Sandia National Labs., Albuquerque, NM (USA)); Dylla, H.F.; Owens, D.K.; Ulrickson, M.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **128/129**: 955-959(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The surface contamination of a graphite rail limiter recently removed from the PDX tokamak has been characterized using ion-beam, electron-beam and X-ray analyses. The major impurities detected were Ti and Fe, with the Ti present in the form of a carbide. The distribution of these elements indicate that the erosion and deposition processes balance at a distance one cm from the apex of this limiter (the point of contact with the plasma) for Ti and at about two cm for Fe. The importance of TiC formation on the conditioning process is discussed.

45890 **Tritium inventory and permeation in TFTR.** Baskes, M.I.; Wilson, K.L. (Sandia National Labs., Livermore, CA (USA)); Brice, D.K.; Doyle, B.L.; Wampler, W.R. (Sandia National Labs., Albuquerque, NM (USA)); Heifetz, D.B.; Dylla, H.F.; Cecchi, J.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **128/129**: 629-635(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The control of tritium in TFTR has both important safety and environmental implications. Current modelling techniques allow realistic predictions of the tritium inventory in and permeation through in-torus components. The source of the tritium was computed using a three-dimensional description of the neutral particle flux on the TFTR vacuum vessel wall from the neutral transport code DEGAS, under plasma conditions modelled with the one-dimensional transport code BALDUR. The movable limiter (graphite) was modelled using an extension of the Local Mixing Model for hydrogen retention and isotope exchange. In particular, the calculations consider the inventory and recycling for the movable limiters (which are expected to experience transient temperatures up to 2000°C) as well as the bumper limiters and protective plates which will remain somewhat cooler. Transient effects in the bulk graphite limiter and in the stainless steel wall were modelled using the DIFFUSE code with materials parameters taken from the most recent literature. It appears that for the expected material properties, specifically the hydrogen recombination constant measured in a clean TFTR environment, and operating scenario, there will be essentially no tritium permeation through the stainless steel walls or bellows and less than 0.1 kCi of tritium inventory in the stainless steel first wall. The limiters may contain as much as 5 kCi of tritium.

45891 **Dynamical calculation of low energy hydrogen reflection.** Baskes, M.I. (Sandia National Labs., Livermore, CA (USA)). *Journal of Nuclear Materials;* **128/129**: 676-680(Dec 1984). (CONF-840520—).

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

A current critical question in plasma/first wall interactions is that of low energy (<100 eV) hydrogen reflection. Experiments in this energy regime are extremely difficult. Previous to this work, calculations have not been performed with an interaction potential of sufficient quality to simulate the chemical interactions which may dominate reflection at low energies. The Embedded Atom Method (EAM) has recently been developed to simulate such chemical interactions with a free surface. Using EAM the reflection coefficient for hydrogen on a clean (100) nickel surface has been calculated as a function of incident energy from 0.1 to 100 eV. At the high end of the range the reflection coefficient is similar to that predicted by TRIM, a binary collision model, but below 3 eV, EAM predicts considerably lower reflection than does TRIM. Additional calculations have been performed to investigate the effects of crystal orientation and angle of incidence. These results will have a significant effect on the predictions made by neutral gas codes such as DEGAS on the modelling of pump limiters and divertor ducts.

45892 **Effective penetration shield design for ICF reactors.** Sawan, M.E.; Vogelsang, W.F.; Sze, D.K. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). pp 675-684 of Proceedings of the sixth international conference on radiation shielding, 2. Tokai, Japan; Japan Atomic Energy Research Inst. (1983). (CONF-830538—Pt.2).

From 6. international conference on radiation shielding; Tokyo, Japan (16 May 1983).

A shield design in which the inner surface is tapered along the direct line-of-sight from the ICF target is presented. This shield design was found to reduce the radiation effects in the final focusing magnets of HIBALL by three orders of magnitude compared to

the traditional untapered shield design. This design results also in reducing radiation streaming into the periodic transport system of HIBALL.

45893 **Multiframe holographic shadowgraphy and interferometry of laser target plasmas.** Busch, G.E.; Charatis, G. (KMS Fusion Inc., Ann Arbor, MI). *Proceedings of the Society of Photo-Optical Instrumentation Engineers;* **348**: 650-657(1983). Contract AC08-82DP40152.

For purposes of characterizing and studying the formation and evolution of laser driven plasmas in fusion research, a method has been developed to optically probe the plasmas and produce a sequence of four or more holographic time resolved image frames at equivalent rates to 20 billion/sec. The plasma uv probe operates at 0.26 μm either in a shadowgraphic or interferometric mode. Electron density contours between $\sim 10^{19}$ and 10^{21} cm^{-3} are obtained from the interferograms. 6 references, 8 figures.

45894 **(PPPL-TRANS—127) Stability of tokamak magnetic configuration with a poloidal divertor.** Bazaeva, A.V.; Bykov, V.E.; Georgievskii, A.V.; Kaminskii, A.O.; Peletminskaya, V.G.; Pyatov, V.H. (Princeton Univ., NJ (USA). Plasma Physics Lab.; AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). Feb 1979. Contract AC02-76CH03073. Translation of KhFTI 77-32, 1977. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85017019.

This paper investigates instabilities in the preseparatrix region of a tokamak magnetic configuration with a poloidal divertor with respect to perturbations produced by various irregularities in the manufacturing of tokamak magnetic systems. A computer solution, a system of differential equations describing the behavior of a force line, showed that small perturbation amplitudes may be the cause of the stochastic instability of force lines in the preseparatrix region. This instability is responsible for a number of demands on the accuracy in the manufacturing of tokamak magnetic systems. In particular, the misalignment in the divertor ring must not be larger than 0.5°, its displacement must be less than $\Delta/R = 10^{-3}$ ($\Delta/R << 10^{-2}$). This study can be used in the design of large thermonuclear installations.

99 GENERAL AND MISCELLANEOUS

45895 **(DOE/MI—0006) Resource guide for Small Minority-Owned Energy Businesses. Volume 1. The resource guide.** (Argonne National Lab., IL (USA)). Aug 1985. Contract W-31-109-ENG-38. 130p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE85017005.

This resource guide has been developed to provide minority business entrepreneurs with a comprehensive framework which will assist them in evaluating the feasibility and viability of specific energy-oriented business options for both current and emerging technologies in the energy industry. It includes information which is applicable to situations within the residential, commercial, industrial, and transportation sectors of the energy industry and attempts to indicate specific levels of government participation, needed financial initiatives, and necessary regulatory adjustments within the dynamic energy environment.

45896 **(DOE/MI—0006-Vol.2) Resource guide for small minority-owned energy businesses. Volume 2. Appendixes.** (Argonne National Lab., IL (USA)). Aug 1985. Contract W-31-109-ENG-38. 117p. NTIS, PC A06/MF A01; GPO Dep. File Number DE85017006.

The 18 appendices are: Business Incubators, State and Technical Assistance Centers and Federal Technical Information Centers Available to US Businesses, 1985, America's 50 High-Tech Highways, Regional Libraries in the Federal Depository Library Program, Publications of the Energy Information Administration, Field Offices of the Small Business Administration, Minority-Owned Banks and Savings & Loan Associations, Publications That Help the Minority Entrepreneur Sell to the Government, Office of Small and Disadvantaged Business Utilization, Small Business/Disadvantaged Business Contacts at DOE Headquarters and Government-Owned Contractor-Operated Facilities, Program Management Centers of the Department of Transportation, Business Service Centers of the General Services Administration, State Offices That Administer the Weatherization Assistance Program, State Energy Offices, State Energy Extension Services, Minority Business Development Centers, Organizations of Interest to Minority-Owned Energy Businesses, and Energy Directories.

45897 **(LA-UR—85-2740) Communicating across barriers at home and abroad.** McDonald, J.W. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 8p. (CONF-850864—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015729.

From Forum 85; Helsingor, Denmark (26 Aug 1985).

This paper intends to catalyze the exchange of experience among technical communicators in meeting the challenge of communicating across a multitude of barriers: linguistic, disciplinary, cultural, political, intellectual, and emotional.

45898 **(SAND—84-0887) Generation of target line-of-sight angles for hardware-in-the-loop simulation of a terminally guided vehicle.** Greene, R.W. (Sandia National Labs., Albuquerque, NM (USA)). Jul 1985. Contract AC04-76DP00789. 16p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016789.

Hardware-in-the-loop simulation of terminal guidance systems requires that the kinematic relationships between the target and the vehicle-mounted target sensor be reproduced accurately. To do this with the vehicle hardware mounted on a gimballed, fixed-base platform, either the platform must be oriented in response to the simulated target encounter geometry or the target must be movable. This report documents several alternate techniques for reproducing the desired line-of-sight angles that locate the target within the field of view of the target sensor.

45899 **Current Energy Patents: a current awareness journal.** Kinser, W.H. (ed.). *Current Energy Patents;* No. 85/1, vp(Jan 1985). (PB—85-902801; CEP—85/1).

Available from National Technical Information Service, Springfield, VA 22161 on a subscription basis at $75.00 per volume (calendar) year.

This monthly current awareness journal provides abstracting and indexing coverage of the international patent literature, including patent applications, that concerns any aspect of energy production, conservation, and utilization. The journal includes all patents entered into the Energy Data Base. The literature is arranged by subject category and abstracts are provided. Indexes are included for the assignee, inventor, subject, and patent number. (WHK)

9901 Management

45900 **(CONF-8506147—1) Highway Construction Inspection Management using a microcomputer.** Chin, S.M. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014311.

From National conference on microcomputers in urban transportation; San Diego, CA, USA (17 Jun 1985).

This paper describes the operation of the Highway Construction Inspection Management Program (HCIMP). HCIMP is a microcomputer based data base management program which enables engineers to store, maintain, and update the quantities and progress of each contract pay item which has been incorporated into the construction project over the contract period. The user can retrieve or review desirable information easily and quickly. In addition, the program can generate a daily inspector report summary, cumulative contract item summary, costs overrun summary, costs underrun summary, and monthly summary expeditously and effortlessly.

45901 (DOE/PE/70267—T41) Energy, foresight, and strategy. Sargent, T.J. (Resources for the Future, Inc., Washington, DC (USA)). Jan 1983. Contract AC01-80PE70267. 19p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016755.

Energy and National Security Series.

This introductory essay establishes the background for a series of seven separate essays which use dynamic economic theory to study aspects of the processes by which energy sources are discovered, priced and stored. (GHT)

45902 (DPSTQA—83-4-2-Rev.2) Savannah River Laboratory quality assurance manual. Revision 2. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.). Feb 1985. Contract AC09-76SR00001. 163p. NTIS, PC A08/MF A01; GPO Dep. File Number DE85017041.

The SRL quality assurance program is a management activity that verifies that the results of our research and development are adequate for their intended use and that our facilities function properly. The program is based on Savannah River Quality Assurance Plan (DPW-82-111-2, Rev 0) as applied through Quality Assurance Procedures and Divisional Plans (following section). The AED policy states that "all activities shall be conducted to achieve a high quality of product and performance..." The policy contains 18 considerations to be applied "proportional to needs, based on the technical and professional judgment of responsible Du Pont employees." Quality is the responsibility of each individual and his line organization, as is safety. To ensure that quality is being considered for all SRL activities, all research programs are reviewed, and all facilities are assessed. These assessments and reviews are the nucleus of the Quality Assurance program.

9902 Mathematics And Computers

REFER ALSO TO CITATION(S) 43754, 44086, 44484, 44754, 44866, 44871, 44949, 44991, 45725

45903 (AD-A—154377/6/XAB) Parallelized-point successive over-relaxation method on a multiple instruction multiple data stream computer. Memorandum report. Patel, N.R.; Sturek, W.B.; Jordan, H.F. (Army Armament Research and Development Command, Aberdeen Proving Ground, MD (USA). Ballistics Research Lab.). Nov 1984. 39p. (BRL-MR—3411). NTIS, PC A03/MF A01.

A parallelized-point rowwise successive over-relaxation (SOR) iterative algorithm is developed for the heterogeneous element processor (HEP) multiple-instruction-stream computer. The classical point SOR method is not easily vectorizable with rowwise ordering of the grid points, but it can be effectively parallelized on a multiple instruction stream machine without suffering in convergence rate. The details of the implementation, including restructuring of a serial FORTRAN program and techniques needed to exploit the parallel-processing architectural concept of the HEP, are presented. The parallelized algorithm is analyzed in detail. The lessons learned in this study are documented to provide guidelines for similar future coding since new approaches and restructuring techniques are required for programming a multiple-instruction machine, which are totally different than those required for programming an algorithm on a vector processor. To assess the capabilities of the parallelized algorithm, it was used to solve Laplace's equation on a rectangular field with Dirichlet boundary conditions. Computer run times are presented that indicate significant speed gain over a scalar version of the code. For a moderate-to-large-size problem, seventeen or more processes are required to make efficient use of the parallel-processing hardware.

45904 (AD-A—154507/8/XAB) Representation of knowledge in image understanding. Annual scientific report, 1 May 1983-30 April 1984. Spinelli, D.N. (Massachusetts Univ., Amherst (USA). Dept. of Computer and Information Science). Mar 1985. 20p. NTIS, PC A02/MF A01.

The author believes that understanding adaptation and knowledge representation is fundamental to make progress in image understanding by animal brains. He has been studying the anatomical structures and the temporal requirements that lead to adaptation. This report makes a brief excursion into some experiments that have been demonstrated in the past. Also discussed is the enormous complexity of the problem at hand, and it is concluded that only a method that allows the reading out of recognizable visual memories has any chance to make progress in this complex endeavor. Determined were some of the parameters that produce powerful adaptation and have methods that allow memory read-outs. A preliminary conclusion is that image understanding requires a learning principle that takes into account the nature of the information and not just temporal and/or spatial relationships. Animal brains possess extremely effective vision systems. Architectural and functional principles gained by studying them will certainly lead to new ideas for new computer architectures especially in the fields of machine vision, adaptation, and parallel computation.

45905 (ANL—84-51-Rev.1) Use of monitors in FORTRAN: a tutorial on the barrier, self-scheduling DO-loop, and askfor monitors. Revision 1. Lusk, E.L.; Overbeek, R.A. (Argonne National Lab., IL (USA)). Jun 1985. Contract W-31-109-ENG-38. 56p. NTIS, PC A04/MF A01; GPO Dep. File Number DE85017051.

A set of macro libraries has been developed that allows programmers to write portable FORTRAN code for multiprocessors. This document presents, in tutorial form, the macros used to implement three common synchronization patterns: self-scheduling DO-loops, barrier synchronization, and the askfor monitor.

45906 (ANL—84-84) Tutorial on the Warren abstract machine for computational logic. Gabriel, J.; Lindholm, T.; Lusk, E.L.; Overbeek, R.A. (Argonne National Lab., IL (USA)). Jun 1985. Contract W-31-109-ENG-38. 56p. NTIS, PC A04/MF A01; GPO Dep. File Number DE85016925.

Computational logic can roughly be defined as that branch of artifical intelligence that is based on logic. It includes logic programming, theorem-proving, rewrite-rule systems, and production-rule systems. Such fields are going through a truly interesting transition. It now is becoming apparent that performance improvements for computational logic systems could be as high as 3 to 5 orders or magnitude during the next 5 to 7 years. These improvements will come from three distinct sources: (1) The processors used in the commonly available computing systems will improve by a factor of 5 to 10. That is, commonly available, cheap processors will increase substantially in speed. (2) Multiprocessors featuring up to 1024 nodes will become widely available. Each node may contain 4 to 16 tightly coupled processors (on a shared memory). (3) Substantial speedups will occur due to improvements in the implementation of the basic algorithms. The last point is the focus of this document.

45907 (CONF-851042—1) Providing personal desktop computing recommendations. Coultis, D.W.; Gallo, M.A. (Argonne National Lab., IL (USA)). 1985. Contract W-31-109-ENG-38. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85007988.

From Association for Computing Machinery conference - the range of computing: mid-80's perspective; Denver, CO, USA (14 Oct 1985).

The increasing number of personal desktop computer users, coupled with rapidly changing personal desktop computer technology, has increased the demand for computing services. However, for many computing centers, budgets have not increased as rapidly as the demand for services. Providing personel desktop computing recommendations and encouraging users to follow them are effective means of meeting demands for computing services, even while operating within a constant or slowly growing budget. Providing personal desktop computing recommendations reduces evaluation costs, shifts the burden of evaluation, eases acquisition, encourages expertise, and expedites the repair of personal desktop computers. In this paper, we discuss issues associated with managing personal desktop computers, present the benefits of providing personal desktop computing recommendations, propose a process and suggestions for making these recommendations, and discuss our experiences with personal desktop computing recommendations at Argonne National Laboratory.

45908 **(CONF-8509140—1) Managing personal desktop computing at Argonne National Laboratory.** Coultis, D.W.; Gallo, M.A. (Argonne National Lab., IL (USA)). 1985. Contract W-31-109-ENG-38. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85014976.

From Conference of the ACM SIGUCCS user services "Pulling It All Together"; Toledo, OH, USA (30 Sep 1985).

The increasing number of personal desktop computer users, coupled with rapidly changing personal desktop computer technology, has increased the demand for computing services at many computing centers. However, for many computing centers, budgets have not increased as rapidly as the demand for services. These centers can use several methods to help balance increasing demands and fixed resources. Providing personal desktop computing recommendations and encouraging users to follow them are effective means of meeting demands for computing services, even while operating within a constant or slowly growing budget. Providing personal desktop computing recommendations reduces evaluation costs, shifts the burden of evaluating personal desktop computing products, and encourages expertise. Making the acquisition of personal desktop computer hardware and software easier benefits the user as well as the computing center. Users receive evaluated products for which they can obtain assistance from the computing center, while computing centers encourage the use of recommended products. Computing centers can also encourage and nurture personal desktop computing users groups. These users groups identify areas of need, participate in the evaluation process, and help reduce the demand for computing center resources. This paper discusses issues associated with managing personal desktop computing, proposes guidelines for instituting a management program, and discusses our experiences with managing personal desktop computing at Argonne National Laboratory.

45909 **(DOE/ER—0240) Summaries of the FY 1984 and FY 1985 Applied Mathematical Sciences research program.** (USDOE Office of Energy Research, Washington, DC. Scientific Computing Staff). Jul 1985. 54p. NTIS, PC A04/MF A01; GPO Dep. File Number DE85016240.

The purpose of this report is to provide a convenient compilation of summaries of the individual research projects that constitute the Applied Mathematical Science research subprogram managed by the Director, Scientific Computing Staff, Office of the Director of Energy Research, Department of Energy. This new office, organized in 1984, consists of the applied mathematical sciences research activity formerly under the Division of Engineering, Mathematical Geosciences, Office of Basic Energy Science, Office of Energy Research, and the management of the expanded National Magnetic Fusion Energy Computer Network formerly under the Office of Magnetic Fusion Energy.

45910 **(DOE/ER/10822—3) Short report and proposal for three-month extension on design, evaluation, and use of high performance computer systems.** Kuck, D.J.; Lawrie, D. (Illinois Univ., Urbana (USA). Dept. of Computer Science). 4 Nov 1983. Contract AC02-81ER10822. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016730.

In the last year, the authors studied many problems regarding design, evaluation, and use of high-performance computer systems: (1) The authors carried out extensive analysis of benchmarks as well as complete programs on our Parafrase system. (2) The authors studied problems of supercomputer design including memory hierarchies, interconnection networks, synchronization problems, control mechanisms, models of computation, organization and access of complicated data structures, and designing high-performance systems with off-the-shelf components. (3) The authors worked on the definition and design of simulators and compilers for high-performance machines. (4) Realizing that automatic vectorization and restructuring of sequential programs does not always produce maximum speedup, the authors developed new algorithms that are used infrequently in well-known programs. These algorithms achieve significant speedups and are numerically stable at the same time.

45911 **(ECN—161) Determination of calibration equations by means of the generalized least squares method.** Zijp, W.L. (Netherlands Energy Research Foundation, Petten). Dec 1984. 29p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85702039.

For the determination of two-dimensional calibration curves (e.g. in tank calibration procedures) or of three dimensional calibration equations (e.g. for the calibration of NDA equipment for enrichment measurements) one performs measurements under well chosen conditions, where all observables of interest (inclusive the values of the standard material) are subject to measurement uncertainties. Moreover correlations in several measurements may occur. This document describes the mathematical-statistical approach to determine the values of the model parameters and their covariance matrix, which fit best to the mathematical model for the calibration equation. The formulae are based on the method of generalized least squares where the term generalized implies that non-linear equations in the unknown parameters and also covariance matrices of the measurement data of the calibration can be taken into account. In the general case an iteration procedure is required. No iteration is required when the model is linear in the parameters and the covariance matrices for the measurements of co-ordinates of the calibration points are proportional to each other.

45912 **(FNAL-TM—1323) Isolated data acquisition system for high voltage applications.** Waitz, A.; Donaldson, A. (Fermi National Accelerator Lab., Batavia, IL (USA); Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jun 1985. Contract AC02-76CH03000. 4p. (CONF-850504—247). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016984.

From Particle accelerator conference; Vancouver, Canada (13 May 1985).

This report describes the design and operation of a microcomputer controlled system for acquisition of both analog and binary data within the high voltage stages of a linac modulator. The system is comprised of a microprocessor Controller which communicates with the remote data Acquisition circuits via an optical bus. The bus, which uses a 1 MHz Manchester II format, is configured as a loop, starting at the Controller, daisy-chaining the remote cards and terminating back at the Controller. Upon receiving a linac timing pulse, the Controller sends addressed commands to the individual remote cards and receives data back. It then passes this data to the linac control system through a Multibus connection. Each remote circuit can return 16 binary sense and 7 (12 bit) analog parameters within 270 us. This speed is possible because of a pipelined design where one word is transmitted while another is being converted. A data conversion cycle is initiated when a remote data acquisition card receives the proper command and address from the controller.

45913 **(IPP—6/236) Computing complex eigenvalues of large non-hermitian matrices.** Kerner, W.; Lerbinger, K.; Steuerwald, J. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Dec 1984. 33p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751878.

The generalized eigenvalue problem Ax = lambdaBx with a non-symmetric matrix A is solved by means of inverse vector iteration. The algorithm makes use of the band structure of the matrices thus allowing quite large dimensions (d <= 3742). In the application all complex eigenvalues for the resistive Alfven modes are successively computed.

45914 **(KFK—3860) FORTRAN-77 version of the Karlsruhe program system KAPROS.** Moritz, N. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Schneller Brueter). Feb 1985. 309p. (In German). NTIS (US Sales Only), PC A14/MF A01. File Number DE85751905.

The FORTRAN-77 KAPROS-kernel includes some major changes compared with the version, which is described in the KfK-report 2254. The changes are documented in this report from the point of view of the system-programmer. This report is meant to be a supplement to the KfK-report 2254, assuming that the reader of

this report is familiar with the KfK-report 2254. He also should be familiar with the IBM operating system MVS SP1.3.2 and the usual terms of data processing.

45915 **(LA-UR—85-2409) Learning styles and embedded training: a case study.** Stoddard, M.L. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 14p. (CONF-860209—1). NTIS, PC A02. File Number DE85015398.

From 27. conference of the Association for Development of Computer Based Instructional Systems; New Orleans, LA, USA (3 Feb 1986).

The purpose of this paper is to describe user behavior with fixed-format and context-sensitive help that has been implemented on a personnel information system at Los Alamos National Laboratory and to suggest that user learning style is a key determinant for the design of embedded training.

45916 **(LA-UR—85-2479) Three-dimensional free Lagrangian hydrodynamics.** Trease, H.E. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 14p. (CONF-8504150—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015707.

From International conference on fluid dynamics; Reading, England (1 Apr 1985).

The purpose of the discussion is to describe the development of a 3-D free Lagrangian hyrodynamics algorithm. The 3-D algorithm is an outgrowth of an earlier 2-D free Lagrange model. Only the more pertinent issues of the free Lagrange algorithm are presented. A complete production code is being developed to support the free Lagrange algorithm described. 4 refs.

45917 **(LBL—16993-Rev.) Lectures on probability and statistics. Revision.** Yost, G.P. (Lawrence Berkeley Lab., CA (USA)). Jun 1985. Contract AC03-76SF00098. 151p. NTIS, PC A08/MF A01; GPO Dep. File Number DE85016571.

These notes are based on a set of statistics lectures delivered at Imperial College to the first-year postgraduate students in High Energy Physics. They are designed for the professional experimental scientist. They begin with the fundamentals of probability theory, in which one makes statements about the set of possible outcomes of an experiment, based upon a complete a priori understanding of the experiment. For example, in a roll of a set of (fair) dice, one understands a priori that any given side of each die is equally likely to turn up. From that, we can calculate the probabilty of any specified outcome. They finish with the inverse problem, statistics. Here, one begins with a set of actual data (e.g., the outcomes of a number of rolls of the dice), and attempts to make inferences about the state of nature which gave those data (e.g., the likelihood of seeing any given side of any given die turn up). This is a much more difficult problem, of course, and one's solutions often turn out to be unsatisfactory in one respect or another. Hopefully, the reader will come away from these notes with a feel for some of the problems and uncertainties involved. Although there are standard approaches, most of the time there is no cut and dried "best" solution - "best" according to every criterion.

45918 **(LBL—19230) Data model and the design of a scientific database management system.** Chan, P.S. (Lawrence Berkeley Lab., CA (USA)). Feb 1985. Contract AC03-76SF00098. 20p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85016486.

A data model consisting of two levels is discussed in this paper. The logical level integrates the n-dimensional concept with the graph concept into a single data structure. To satisfy the requirement of time variation of data definitions, the idea of effectivity is incorporated. At the physical level, the data model partitions the n-dimensional data space into subspaces which can be accessed randomly and processed in parallel. 17 refs., 4 figs.

45919 **(LBL-PUB—3052) Software tools programmer's manual.** Breckon, T.; Jacobson, V.; Leres, C.; Paxson, V.; Travis, N. (Lawrence Berkeley Lab., CA (USA)). Apr 1985. Contract AC03-76SF00098. 777p. NTIS, PC A99/MF A01; 1; GPO Dep. File Number DE85016421.

This manual covers programming tools available at the Lawrence Berkeley Laboratory. (GHT)

45920 **(ORNL/TM—9656) Navy aircraft support data systems study: ECAMS/NALCOMIS integration feasibility and procedure.** Carr, K.R. (Oak Ridge National Lab., TN (USA)). Aug 1985. Contract AC05-84OR21400. 78p. NTIS, PC A05/MF A01; GPO Dep. File Number DE85016977.

A study was done to identify and evaluate options for providing major improvements, extensions, and integration of essential automatic data processing equipment. This work is part of a long-term (several years duration) project in which Oak Ridge National Laboratory (ORNL) is establishing a "center of excellence" in support of the Department of the Navy in the Shipboard Nontactical Automated Data Processing Program. The program involves Honeywell DPS-6 minicomputers, Digital Equipment Corporation PDP-11 minicomputers, Zenith personal computers, and magnetic tape readers for surface processing of in-flight recorded data. The central issue addressed in this report is hardware and software options for interfacing the tape readers to the Honeywell equipment. (Even though the tape readers may eventually be replaced, the interface is needed at least for a few years transition period and probably would be used by the replacement system). Three leading candidate methods for providing the required interface were identified and analyzed. Variations of one method were also analyzed. A system-by-system comparison of the options is given in seven key areas: data transfer speed, data transmission distance capabilities, adaptability for processing classified data, flexibility and/or expandability, space required, logistics, and cost.

45921 **(UCID—20467) GRAFL-II: user oriented science graphics.** McNamara, B.; Willmann, P.A. (Lawrence Livermore National Lab., CA (USA)). 18 Jun 1985. Contract W-7405-ENG-48. 34p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85017147.

GRAFL-II is a small set of plotting routines able to produce 95% of the 2-dimensional figures and plots in the scientific literature from your Fortran code. The routines and their arguments have been designed to give extensive control over this type of picture with the minimum of fuss. We offer these 28 routines as a standard for the FORTRAN-based front end to any graphics library. The routines have been implemented on the MFECC computers to run the GRAFLIB and TV80LIB systems developed at Livermore. Although some of the coding uses low-level GRAFCORE routines it is sufficiently well commented to be easily modified or rewritten to drive other graphics libraries and enable codes to be transported more easily. A partial translation to drive the CERN graphics system has been made for use at the International Centre for Theoretical Physics, Trieste.

45922 **(UCRL—89640) Parallel P-code for Parallel Pascal and other high level languages.** Bruner, J.D.; Reeves, A.P. (Lawrence Livermore National Lab., CA (USA); Cornell Univ., Ithaca, NY (USA). School of Electrical Engineering). 21 Jul 1983. Contract W-7405-ENG-48. 6p. (CONF-8308190—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85016097.

From 12. IEEE international conference on parallel processing; Bellaire, MI, USA (21 Aug 1983).

Parallel P-code is an intermediate compiler language for parallel processors. It was originally designed as part of a Parallel Pascal compiler for NASA's Massively Parallel Processor (MPP). However, it should also be suitable for a wide variety of high level languages and parallel architectures. Parallel P-code is based on a P-code language for serial processors; this paper describes the extensions which were necessary for the parallel environment.

45923 **Cross-validation of regression models.** Picard, R.R.; Cook, R.D. (Los Alamos National Lab., NM). *Journal of the American Statistical Association;* 79: No. 387, 575-583(Sep 1984).

A methodology for assessment of the predictive ability of regression models is presented. Attention is given to models obtained via subset selection procedures, which are extremely difficult to evaluate by standard techniques. Cross-validatory assessments of

predictive ability are obtained and their use illustrated in examples. 28 references.

45924 **Piecewise data flow architecture: architectural concepts.** Requa, J.E.; Mcgraw, J.R. (Lawrence Livermore National Lab., CA). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Computers;* 5: 425-438(May 1983).

This paper presents the design and a brief analysis of the piecewise data flow computer (PDF), an architecture proposed for very high-performance computing. PDE is a heterogeneous multiprocessor system having both SIMD and MIMD characteristics. Each computation is translated into a control flow graph in which each node contains a basic block of instructions. Concurrency can be exploited in three different ways: simultaneous execution of independent basic blocks, simultaneous execution of independent instructions within a basic block, and intrinsic array operations. This program representation is amenable to traditional languages (e.g., FORTRAN) because almost all optimizing compilers use basic blocks as their internal representation. New functional languages should be able to exploit this architecture even more easily. The most significant aspects of the PDF architecture concern scheduling basic blocks for execution, allocating registers to intermediate results, and assigning instructions to processors. 22 references.

45925 **(DOE/NBM—5017027) EPIC/JANUS user's guide.** (USDOE Energy Information Administration, Washington, DC). Aug 1985. 221p. NTIS, PC A10/MF A01; 1 - GPO; GPO Dep. File Number DE85017027.

EPIC/JANUS, the Energy Information Administration's (EIA) Publication and Interactive Composition System, is a software system that allows text, tables, and graphics to be combined interactively in a single document. It automates the entire process of composition and production of camera-ready copy. EPIC is a machine-independent document management and translation system developed by EIA. JANUS is an interactive document composition system which actually formats and typesets a document.

45926 (EGG/10282—1057, pp 18.1-18.24) **Data representation: a historical perspective.** Smith, D.B. (EG and G Energy Measurements Inc., Las Vegas, NV). Jan 1985. NTIS, PC A19/MF A01. File Number DE85010212. (CONF-830286—).

From Symposium on remote sensing technology; Las Vegas, NV, USA (23 Feb 1983).

The evolution of data presentation methods within the Aerial Measurements Operations is traced through the history of that organization. Data described is primarily three-dimensional, with some reference to one-, two-, and other multidimensional representations. Throughput and ease of implementation for the various and popular methods of representing data in the near future are discussed.

45927 **(K/CSD/INF—85-6) Modeling network data structures in relational-like data base management systems.** Scott, G.W. (Oak Ridge Gaseous Diffusion Plant, TN (USA)). 1985. Contract AC05-84OT21400. 15p. (CONF-8509135—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015803.

From 1022/1032 users conference; Boston, MA, USA (22 Sep 1985).

This paper describes the implementation of a database within the System 1022 environment that successfully models a network data structure. Issues and problems relative to the representation of "many-to-many" relationships among data types in "relational-like" structures are discussed along with alternative solutions. Analysis procedures are described which led to the employment of a "special" System 1022 file that simulates the role of "junction" records in networks. A System 1022 database to assist in the management of CAD/CAM system resources has been developed at Martin Marietta Energy Systems utilizing this concept and is used as a practical example of this approach to data representation.

45928 **(LA-UR—85-2329) Logical and physical database design within a full-text environment.** Michelsen, C.D.; Shafer, D.F. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 11p. (CONF-850295—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015683.

From 2. IEEE international conference on data engineering; Los Angeles, CA, USA (4 Feb 1985).

This paper describes the problems and solutions encountered in the design of logical and physical data bases within a full-text environment. A full-text environment can be defined as data bases that store both citation information as well as actual document text. The problems/solutions encountered were a result of the necessity to integrate distinct physical data bases into a single logical data base without the assistance of a Data Base Management System that is capable of physical data base integration.

45929 **(SAND—84-7154) SABIRS: user reference and system documentation.** Flaming, R.M.; Bemesderfer, J. (Sandia National Labs., Albuquerque, NM (USA)). Jul 1985. Contract AC04-76DP00789. 45p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85016801.

SABIRS is an acronym for Sandia Abbreviated Bibliographic Information Retrieval System. This document is both a reference for users and system documentation which would permit a simple installation in a small or medium sized library on virtually any computer system.

45930 **Nuclear Fuel Cycle: a current awareness bulletin.** McLaren, L.H. (ed.). *Nuclear Fuel Cycle;* No. 85/1, vp(15 Jan 1985). (PB—85-913401; DOE/NFC—85/1).

Available from National Technical Information Service, Springfield, VA 22161 on a subscription basis at $40.00 per volume (calendar) year.

Nuclear Fuel Cycle announces on a semimonthly basis the current worldwide information available on all aspects of fuel cycle except in-reactor properties and fuel performance and the management of radioactive wastes.

45931 **Radioactive Waste Management: a current awareness bulletin.** McLaren, L.H. (ed.). *Radioactive Waste Management (Oak Ridge, Tennessee);* No. 85/1, vp(15 Jan 1985). (PB—85-902901; DOE/RWM—85/1).

Available from National Technical Information Service, Springfield, VA 22161 on a subscription basis at $40.00 per volume (calendar) year.

Radioactive Waste Management announces on a semi-monthly basis the current worldwide information available on radioactive waste processing and disposal, spent fuel storage, and transport of spent fuels and radioactive wastes.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Relativistic rotation of spin and asymptotic behaviour of the form factor of the composite system, 10:45589 (R;SU)
Study of form factors of elastic and inelastic electron scattering by ^{20}Ne, 10:45611 (R;SU)
Three-body approach to the d(N, 2N)N reaction, 10:45588 (R;SU;In Russian)

Applied Decision Analysis, Inc., Menlo Park, CA (USA)
Utility fuel inventory model: Version 1.0, 10:44503 (R;US)

Arawak Consulting Corp., New York (USA)
1982 HHS/LIHEAP funds used for weatherization. An analysis of data from twenty states: Task A. Final report, 10:44539 (R;US)
Analytic methodologies for program evaluation for the Department of Energy Low Income Weatherization Assistance Program, task B. Final report, 10:44538 (R;US)

Procurement practices in state and local agencies within the Department of Energy low income weatherization assistance program. Final report. Task C, 10:44536 (R;US)
Revised grantee and subgrantee weatherization monitoring instruments and pre-tests. Final report. Tasks D and E, 10:44540 (R;US)
Transferable methods identified during the monitoring of the DOE Chicago Operations Office Weatherization Assistance Program. Final report. Task F, 10:44537 (R;US)

Arbeitsgemeinschaft der Grossforschungseinrichtungen (AGF), Bonn (Germany, F.R.)
Activities in biological radiation research at the AGF, 10:45230 (R;DE;In German)

ARCO Comfort Products Co., Hutchins, TX (USA)
Development of solar assisted heat pumps for the heating and cooling of buildings. Volume II. Final technical report, February 1, 1978-June 30, 1980, 10:44060 (R;US)

Argonne National Lab., Idaho Falls, ID (USA)
Combination of artificial intelligence and procedural language programs in a computer application system supporting nuclear reactor operations, 10:44310 (R;US)
Performance assessment of OTEC power systems and thermal power plants. Final report. Volume II. Users' manual for PACC-OTECs, 10:44026 (R;US)

Argonne National Lab., IL (USA)
Analysis and characterization of chemically modified coal macerals using density gradient centrifugation, 10:43649 (R;US)
Avoiding leakage flow-induced vibration by a tube-in-tube slip joint, 10:44255 (R;US)
Characterization and reactivity of hydroxyls and ethers in coal macerals, 10:43647 (R;US)
^{13}C-NMR tracer to probe coalification, 10:43648 (R;US)
Conceptual design basis and temperature predictions in a simulated instrumented LMFBR blanket subassembly, 10:44256 (R;US)
Critique of methods to measure dry deposition workshop summary, 10:45110 (R;US)
Elastic and inelastic surface effects on ion penetration and the resulting sputtering and backscattering, 10:45829 (R;US)
Electron spin resonance of isolated coal macerals, 10:43650 (R;US)
Evaluation of solar heating systems with seasonal storage in New England. Systems using duct storage in rock and heat pump, 10:44032 (R;US)
Far-field model of the regional influence of effluent plumes from ocean thermal energy conversion (OTEC) plants, 10:44024 (R;US)
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
Heat exchanger vibration analysis (HXVA) for prediction of tube bundle instabilities, 10:44893 (R;US)
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)
Light-water-reactor safety research program. Quarterly progress report, January-March 1980, 10:44384 (R;US)
Managing personal desktop computing at Argonne National Laboratory, 10:45908 (R;US)
Meso- and synoptic-scale pollutant transport. Review of episode formation and transport meteorology, methods of analysis, and anatomy, 10:45072 (R;US)
Nuclear Technology Programs. Quarterly progress report, October-December 1984, 10:43887 (R;US)
Numerical simulation of heat exchanger, 10:44257 (R;US)
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)
Phenomenological model for stress corrosion cracking of Types 316NG and 316 stainless steel, 10:44184 (R;US)
Postirradiation analysis of experimental uranium-silicide dispersion fuel plates, 10:44185 (R;US)
Providing personal desktop computing recommendations, 10:45907 (R;US)
Real-time LMFBR steam generator analyzer, 10:44254 (R;US)
Resource guide for Small Minority-Owned Energy Businesses. Volume 1. The resource guide, 10:45895 (R;US)
Resource guide for small minority-owned energy businesses. Volume 2. Appendixes, 10:45896 (R;US)
Review of effects of long-term aging on the mechanical properties and microstructures of Types 304 and 316 stainless steel, 10:44253 (R;US)
Role of hydrogen embrittlement in intergranular stress corrosion cracking of sensitized Type 304 stainless steel, 10:44595 (R;US)
Role of iron sulfides stoichiometry in the direct liquefaction of coal, 10:43620 (R;US)
State of the Middle Great Lakes: results of the 1983 water quality survey of Lakes Erie, Huron, and Michigan, 10:45185 (R;US)
Technique of analysis and error detection for thermo-hydraulic system data, 10:44341 (R;US)
Tutorial on the Warren abstract machine for computational logic, 10:45906 (R;US)
Use of monitors in FORTRAN: a tutorial on the barrier, self-scheduling DO-loop, and askfor monitors. Revision 1, 10:45905 (R;US)

Arinc Research Corp., Annapolis, MD (USA)
Reliability, availability, and maintainability audit of the Cool Water Plant Units 3 and 4, Southern California Edison Company. Final report, 10:44159 (R;US)

Arizona State Univ., Tempe (USA). Coll. of Engineering and Applied Sciences
Performance characteristics of open-flow liquid desiccant solar collector/regenerator for solar cooling applications. Part I: two dimensional analysis of heat and mass transfer for open flow over rough inclined surfaces, 10:44065 (R;US)

Arizona State Univ., Tempe (USA). Dept. of Mechanical and Aerospace Engineering
Evaluation of anelastic evidence for interstitial solute binding in bcc metals, 10:44636 (R;US)

Arizona Univ., Tucson (USA). Dept. of Hydrology and Water Resources
Field and theoretical investigations of fractured crystalline rock near Oracle, Arizona, 10:45290 (R;US)

Army Armament Research and Development Command, Aberdeen Proving Ground, MD (USA). Ballistics Research Lab.
D-region physical chemistry, 10:45060 (R;US)
Investigation of several low-lying levels of X doublet pi state of NCO using argon laser excited fluorescence. Final technical report, 10:44822 (R;US)
Parallelized-point successive over-relaxation method on a multiple instruction multiple data stream computer. Memorandum report, 10:45903 (R;US)

Army Military Personnel Center, Alexandria, VA (USA)
Linear-programming-based coal preparation and blending technique. Final report, 10:43614 (R;US)

Army Nuclear Effects Lab., Edgewood Arsenal, MD (USA)
Initial gamma data from nuclear-weapon tests 1948 through 1962, 10:45063 (R;US)

Atomic Energy Control Board, Ottawa, Ontario (Canada)
Automated methods for thorium determination in liquids, solids and aerosols, 10:44742 (R;CA)
Canadian approach to nuclear power safety, 10:44358 (R;CA)
Correlation analysis of first phase monitoring results for uranium mill workers, 10:45229 (R;CA)
Origin and subsurface migration of radionuclides from waste rock at an abandoned uranium mine near Bancroft, Ontario, 10:45176 (R;CA)
Practical reference - radiation standards in Canada, 10:45740 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Scope determination, 10:43914 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. GASPROB code documentation, 10:43915 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Consequence assessments, 10:43916 (R;CA)
Review of existing instrumentation and evaluation of possibilities for research and development of instrumentation to determine future levels of radon at a proposed building site, 10:45147 (R;CA)
Seismic qualification of equipment. A summary of findings, 10:44357 (R;CA)
Testing and evaluation of existing techniques for identifying uptakes and measuring retention of uranium in mill workers, 10:45228 (R;CA)
Uranium tailings in Canada. Regulation and management, 10:43860 (R;CA)

Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.

Absorption factor tables for x-ray and neutron scattering in cylindrical samples, 10:45718 (R;CA)
AECL research programs in systems chemistry, 10:44242 (R;CA)
Assessing reliability and useful life of containers for disposal of irradiated fuel waste, 10:43826 (R;CA)
Brief review of tube fretting-wear in heat exchangers, 10:44891 (R;CA)
Characteristics of a thermal neutron source based on an intermediate energy proton accelerator, 10:44927 (R;CA)
Collisions of neutrons and of gamma rays in $Bi_4Ge_3O_{12}$ (BGO) and NaI(Tl) scintillation detectors, 10:45006 (R;CA)
Computer-aided tube fretting-wear predictions, 10:44892 (R;CA)
Design and performance evaluation of the ultrasonic random coil identity-integrity element for underwater safeguards seals, 10:43900 (R;CA)
Design of a multivariable controller for a CANDU 600 MWe nuclear power plant using the INA method, 10:44308 (R;CA)
Detailed neutron activation measurements in lattices with 31-element PuOsub(2)-UOsub(2) clusters of simulated burned-up natural uranium fuel in heavy water moderator, 10:44245 (R;CA)
Determination of hafnium in zirconium metal and alloys by inductively coupled plasma using an algorithm for background correction, 10:44736 (R;CA)
Dynamic response degradation of platinum self-powered detectors with low insulation resistance, 10:44336 (R;CA)
Eddy current inspection of mildly ferromagnetic tubing, 10:44898 (R;CA)
Experiments performed in ZED-2 in support of the irradiation of $(Th,Pu)O_2$ fuel (BDL-422) in NRU, 10:44246 (R;CA)
Improved radiochemical method for the isolation of uranium from other actinides in urine, 10:44839 (R;CA)
Introduction to first order optics. Two lectures given to Scanditronix staff, May 1982, 10:44936 (R;CA)
Investigations of crack initiation during environmentally induced cracking of the Zircaloys, 10:44335 (R;CA)
Isotope enrichment in zirconium with a plasma centrifuge. Final report on contract CR31-3946, 10:43913 (R;CA)
Large-signal, dynamic simulation of the SLOWPOKE-3 nuclear heating reactor, 10:44272 (R;CA)
Measurement of natural uranium in urine by fluorometry, 10:44735 (R;CA)
Mechanical development for reliable reactor components, 10:44247 (R;CA)
Method of predicting pressure profiles in horizontal 37-element clusters, 10:44888 (R;CA)
Microbial mediation of radionuclide transport -significance for the nuclear fuel waste management program, 10:43827 (R;CA)
Migration of radionuclides in porous media. Analysis of experimental data, 10:45141 (R;CA)
Moving boundaries in heat conduction and mass diffusion problems, 10:44889 (R;CA)
Plutonium and U-233 mines, 10:43814 (R;CA)
Predicted and measured velocity distribution in a model heat exchanger, 10:44890 (R;CA)
Purification of zirconium by electrotransport, 10:44580 (R;CA)
Purposely defected UO_2-Zircaloy fuel elements irradiated in pressurized light water at linear powers of 55 kW/m, 10:44333 (R;CA)
Reassessment of the control system of the NRX research reactor, 10:44309 (R;CA)
Release of short-lived fission products from operating UO_2 fuel under oxidizing conditions, 10:44302 (R;CA)
Self-powered flux detectors. A bibliography with summaries, 10:45007 (R;CA)
Steam generator tube performance. Experience with water-cooled nuclear power reactors during 1981, 10:44181 (R;CA)
Subsurface contaminant transport from the liquid disposal area, CRNL. Hydrogeology and tritium contamination near the chemical pit, 10:45174 (R;CA)
Summary of methods for conditioning and immobilizing ion-exchange resins, 10:43825 (R;CA)
TASCC - the next five years, 10:44962 (R;CA)
Thermal neutron source study, 10:45717 (R;CA)
Thorium fuel cycles in CANDU reactors. A review, 10:44248 (R;CA)
Transient fission product release within operating UO_2 fuel elements during power cycles, 10:44301 (R;CA)

Atomic Energy of Canada Ltd., Pinawa, Manitoba. Whiteshell Nuclear Research Establishment

Assessment of the thermodynamic behaviour of neptunium in water and model groundwaters from 25 to 150 degrees C, 10:44838 (R;CA)
Ballooning of thin-walled tubes with an azimuthal temperature gradient, 10:44287 (R;CA)
Canadian nuclear fuel waste management program, 10:43823 (R;CA)
Effect of oxygen on the failure of reactor fuel sheaths during a postulated loss-of-coolant accident, 10:44334 (R;CA)
Effect on localized waste-container failure on radionuclide transport from an underground nuclear waste vault, 10:43824 (R;CA)
Kinetics of iodine and cesium reactions in the CANDU reactor primary heat transport system under accident conditions, 10:44244 (R;CA)
Methods for analysing substitution experiments in thermal reactors, 10:44241 (R;CA)
Modification of thermal sensitivity of Chinese hamster cells by exposure to solutions of monovalent and divalent cationic salts, 10:45256 (R;CA)
MONTEC, an interactive FORTRAN program to simulate radiation dose and dose-rate responses of populations, 10:45215 (R;CA)
Study of the effect of circumferential temperature variations on fuel-sheath strain in an inert atmosphere, 10:44300 (R;CA)
Study of the health of the employees of Atomic Energy of Canada Limited. II. Implementing the study, 10:45216 (R;CA)

Comparative laboratory evaluation of resin-grouted roof bolt elements. Report of Investigations/1985, 10:43684 (R;US)
Comparison of rotary and in-hole motor techniques for drilling horizontal boreholes in coal. Report of Investigations/1985, 10:43709 (R;US)

Bureau of Mines, Spokane, WA (USA). Spokane Research Center
Safety aspects of pneumatic transport. Information Circular/1985, 10:43686 (R;US)

Bureau of Mines, Twin Cities, MN (USA). Twin Cities Research Center
Device for in-situ measurement of coal-cutting forces. Report of Investigations/1985, 10:43687 (R;US)

Bureau of Reclamation, Boise, ID (USA). Pacific Northwest Region
Fish passage improvements at Three Mile Falls Diversion Dam, Umatilla River, Oregon. Final completion report, 10:45190 (R;US)

Bureau of Reclamation, Denver, CO (USA). Engineering and Research Center
Southwest region solar pond study for three sites: Tularosa Basin, Malaga Bend, and Canadian River, 10:44019 (R;US)

C

California Inst. of Tech., Pasadena (USA). Arthur A. Noyes Lab. of Chemical Physics
Application of electron-transfer theory to several systems of biological interest, 10:43979 (R;US)

California Univ., Berkeley (USA). Dept. of Chemistry
Vibrational predissociation spectroscopy of hydrogen cluster ions, 10:45397 (R;US)

California Univ., Berkeley (USA). Dept. of Mechanical Engineering
Numerical simulation of buoyant turbulent flow. Final report, 10:44021 (R;US)

California Univ., Los Angeles (USA). School of Engineering and Applied Science
Fusion materials activation characteristics as related to waste disposal requirements, 10:45827 (R;US)

California Univ., Riverside (USA). Statewide Air Pollution Research Center
Field air-exclusion system for measuring the effects of air pollutants on crops. Final report, 10:45271 (R;US)

California Univ., Santa Barbara (USA). Dept. of Mechanical and Environmental Engineering
Direct radiant heating of particle suspensions for the production of fuels and chemicals using concentrated sunlight, 10:44092 (R;US)

California Univ., Santa Cruz (USA). Lick Observatory
Theoretical models for Type I and Type II supernova, 10:45335 (R;US)

Canadian Nuclear Association, Toronto, Ontario
Decontamination of nuclear facilities. Keynote addresses, 10:43889 (R;CA)

Case Western Reserve Univ., Cleveland, OH (USA). Dept. of Radiology
Electron reactions in model and biological systems, 10:45261 (R;US)

Catholic Univ. of America, Washington, DC. Dept. of Mechanical Engineering
Measurement and control of electrostatic charges on solids in a gaseous suspension. Technical progress report No. 4, 10:43691 (R;US)

CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)
Coulometric determination of americium and curium for the preparation of reference solutions, 10:44737 (R;FR)
Experimental study on the adiabatic shear bands, 10:44587 (R;FR;In French)
Quality factor in earth crust by analysis and modelling of Lg waves, 10:45298 (R;FR;In French)

CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)
Elastic-plastic waves in UV 0.2 Uranium alloy, 10:44584 (R;FR)
Half-space problem for a transport equation issue from a radiative transfer problem, 10:45720 (R;FR;In French)
Performances of a picosecond streak camera used in conjunction with a photodiode array measuring system, 10:45042 (R;FR)
Radiative transfer equation accretiveness, 10:45719 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)
Gamma radiolysis of glucose and relative compounds: a spin-trapping study, 10:44831 (R;FR;In France)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France)
Determination of hydrazoic acid in the solutions of the Purex process, 10:43817 (R;FR;In French)
Fluorescence emission by molecular impurities in irradiated and non-irradiated silica, 10:44701 (R;FR)
Gas adsorption during storage of plutonium dioxide powders, 10:44662 (R;FR)
Lanthanides and trivalent actinides complexation by tripyridyl triazine, applications to liquid-liquid extraction, 10:43818 (R;FR;In French)

Method for the evaluation of radiologic consequence of the dumping of low- and medium-level radioactive wastes on the deep sea bed, 10:43895 (R;FR;In French)
Order and disorder in transition metal carbides and nitrides: experimental and theoretical aspects, 10:44661 (R;FR)
Quick evaluation of the neutron dose following a criticality accident by measurement of sodium 24 activity, 10:45737 (R;FR;In French)
Radiation damage in boron carbide: swelling and microcracking, 10:44660 (R;FR;In French)
Radiation damage in SmS, SmSsub(1-x)Psub(x) and SmB_6, 10:44698 (R;FR)
Zirconium fabrication and junction between zirconium or titanium and stainless steel, 10:44585 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France)
Development of vertical axis wind turbines Darrieus type, 5m diameter, at Grenoble (France), 10:44138 (R;FR)
Influence of different irradiation facilities on the response of radioprotection devices, 10:45011 (R;FR;In French)
Ion mixing and radiation induced segregation in the Fe, Ni, Si system, 10:44581 (R;FR)
Principles of μSR technics, 10:45742 (R;FR;In French)
Reduction of energy consumption in horticulture: solar greenhouse and utilization of tepid waters, 10:44564 (R;FR;In French)
μSR-studies of magnetic properties of metallic rare earth compounds, 10:44583 (R;FR)
Stability of void fraction waves and bubble-slug transition, 10:44894 (R;FR;In French)
Study of crystalline and amorphous DyAg by muon spin relaxation, 10:44582 (R;FR)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)
Absolute and intrinsic response probabilities of scintillators presenting straight truncated cylindrical geometries to photons imitted by sources of the same shape, 10:45012 (R;FR;In French)
A-dependence of deep inelastic lepton-nuclear scattering from 6-quark clustering, 10:45466 (R;FR)
Analysis of β, X, and γ emitting nuclides in radioactive mixtures; results of interlaboratory tests R15, R16, R17 and R18, 10:45736 (R;FR;In French)
Cerebral haemodynamic and metabolic changes in carotid artery occlusion: a PET study, 10:45200 (R;FR)
Constructive approach to the ground-state energy of a hard-core square-well fermion system, 10:45467 (R;FR)
Energy transfer in covalently linked and face to face bisporphyrins, 10:43980 (R;FR;In French and English)
Experimental evidence for the decay W → tau nu/sub tau/ of the charged intermediate vector boson at the CERN pantip collider, 10:45415 (R;CH)
Free electron laser on the ACO storage ring, 10:44928 (R;FR;In French)
Laser isotopic separation. Performance estimation, 10:43808 (R;FR;In French)
Micro-temporal and spectral structure of storage ring free electron lasers, 10:44995 (R;FR;In French and English)
Modelisation of soluble aerosols behaviour in the atmosphere of a PWR nuclear reactor in case of accident, 10:44216 (R;FR;In French)
Molecular dynamic study of defects created by irradiation in vitreous silica, 10:44702 (R;FR;In French)
Phase stability under irradiation, 10:44586 (R;FR)
Reaction of two amino-acids: alanine and threonine with UF_6 in anhydrous HF, 10:44840 (R;FR;In French)
Some clues for the iron origin in galaxy clusters, 10:45324 (R;FR)
Some modelisation aspects of the instrumental transformation of neutron kinetic energy into electrical impulse amplitude, 10:45722 (R;FR;In French)
Space and energy dependence of uranium 238 resonance capture rate in a heterogeneous lattice, 10:44283 (R;FR;In French)
Study of crystalline and amorphous DyAg by muon spin relaxation, 10:44582 (R;FR)
Study of lead and cadmium cryptate reduction by pulsed radiolysis, 10:44832 (R;FR;In French)
Study of particle production at 90 degrees in proton-antiproton interactions at the CERN SPS collider, 10:45414 (R;FR;In French)
Study of structured mixtures water-dextran by radiolysis and photolysis. Case of electron transfer between zinc porphyrin and methylviologen, 10:44833 (R;FR;In French)
Transport equation solving methods, 10:45721 (R;FR;In French)
Use of sulfur as working fluid for topping cycles, 10:44155 (R;FR)
Zirconium fabrication and junction between zirconium or titanium and stainless steel, 10:44585 (R;FR;In French)

CEA Etablissement de la Vallee du Rhone, 30 - Bagnols-sur-Ceze (France)
Advanced immobilization processes for fuel hulls and dissolver residues, 10:43830 (R;FR)
Application of ultramicrotome section technique to the characterization of nuclear glass durability, 10:44700 (R;FR;In French)
Influence of the leaching mode on the durability of a glass for fission product containment, 10:44699 (R;FR;In French)
Vitrification experience and projects in France, 10:43829 (R;FR)

CEA, 75 - Paris (France)
New directions in liquid wastes treatment, 10:43828 (R;FR)

Center for Strategic and International Studies, Washington, DC (USA)
Role of the private sector in energy emergencies. Executive summary, 10:44475 (R;US)

Central Electricity Generating Board, Berkeley (UK). Berkeley Nuclear Labs.
Experimental study of the time dependence of uptake from soil of ^{137}Cs, ^{106}Ru, ^{144}Ce and ^{99}Tc into green vegetables, wheat and potatoes, 10:45142 (R;GB)

Central Electricity Generating Board, London (UK). Translations Section
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)
Corrosion of heat exchanger tubes by flue gases containing HCl produced during the incineration of refuse, 10:44918 (TJ;GB)
Current state of knowledge on fire-side boiler fouling, 10:44922 (TJ;GB)
District heating from Beznau Nuclear Power Station: first extention for Refuna in operation, 10:44469 (TJ;GB)
New fire barrier systems for cables and pipes, 10:44876 (TJ;GB)

Central Washington Univ., Ellensburg (USA). Dept. of Computer Science
Combination of artificial intelligence and procedural language programs in a computer application system supporting nuclear reactor operations, 10:44310 (R;US)

Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique
Are gauge symmetries symmetries, 10:45528 (R;FR)
Non-Abelian Bohm-Aharonov effect in geometric quantization, 10:45753 (R;FR)
Phase in the Aharonov-Bohm experiment, 10:45347 (R;FR)
Relation between the (N) and (N-1) electrons atomic ground state, 10:45346 (R;FR)
Remark on the cluster theorem, 10:45547 (R;FR)
Survival of grand unified monopoles, 10:45529 (R;FR)

Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro
Diffractive dissociation in $pp \rightarrow \Delta^{++} \pi^- p$. 2. Slope-mass-partial wave correlation, 10:45465 (R;BR)

Centro Tecnico Aeroespacial, Sao Jose dos Campos (Brazil). Inst. de Estudos Avancados
Benchmarks with diffusion theory and transport theory, 10:45724 (R;BR;In Portuguese)
Preliminary study of the thermo-hydraulic behaviour of the binary breeder reactor, 10:44258 (R;BR;In Portuguese)

CeramPhysics, Inc., Westerville, OH (USA)
Capacitive energy storage at cryogenic temperatures. Final report, 1 September 1984-28 February 1985 on Phase 1, 10:44442 (R;US)

Ceskoslovenska Komise pro Atomovou Energii, Prague
Seismic effects on technological equipment and systems of nuclear power plants, 10:44359 (R;CS;In Czech)

Charbonnages de France, 75 - Paris
1982 progress report for Charbonnages de France, 10:43705 (R;FR;In French)
Houilleres de France Annual statistics 1983, 10:43681 (R;FR;In French)

Chicago Univ., IL (USA)
Limits of thermochemical and photochemical syntheses of gaseous fuels: a finite-time thermodynamic analysis. Annual report, September 1983-February, 1985, 10:43932 (R;US)
[Topics in theoretical physics]. Progress report, 10:45551 (R;US)

Chicago Univ., IL (USA). Dept. of Chemistry
Analysis and characterization of chemically modified coal macerals using density gradient centrifugation, 10:43649 (R;US)
Chicago Univ., IL (USA). Dept. of Geophysical Sciences
Meso- and synoptic-scale pollutant transport. Review of episode formation and transport meteorology, methods of analysis, and anatomy, 10:45072 (R;US)
Cincinnati Univ., OH (USA). Dept. of Chemistry
Noble gas-carbon dioxide thermal diffusion factors: anomalous behavior for Ar/CO_2, 10:44782 (R;US)
Cincinnati Univ., OH (USA). Dept. of Physics
First-principles calculation of the magnetic properties of paramagnetic fcc iron, 10:44594 (R;US)
Cobble (James W.), La Jolla, CA (USA)
Theory on trace arsenic in geothermal fluids. Final report, 10:44136 (R;US)
Cold Regions Research and Engineering Lab., Hanover, NH (USA)
Catalog of Corps of Engineers structure inventories suitable for the acid precipitation-structure materials study. Special report, 10:44697 (R;US)
Measuring thermal performance of building envelopes: nine case studies, 10:44522 (R;US)
College de France, 75 - Paris. Lab. de Physique Corpusculaire
Classical mechanics and confinement, 10:45760 (R;FR;In French)
Processes related to photon-photon collisions, 10:45511 (R;FR)
Colorado State Univ., Fort Collins (USA). Dept. of Electrical Engineering
Finite element modeling of pulsed eddy current NDT phenomena, 10:44418 (R;US)
Colorado Univ., Boulder (USA)
Studies of metal/carbon surface chemistry. Reporting period: March 1, 1985-May 31, 1985, 10:43628 (R;US)
Columbia Univ., New York (USA). Dept. of Chemistry
Energy partitioning in elementary gas phase reactions. Progress report, April 1, 1983-August 31, 1985, 10:44773 (R;US)
Comision Nacional de Energia Atomica, Buenos Aires (Argentina)
Identification of radioactive minerals by means of X-rays, 10:44841 (R;AR;In Spanish)
Commission of the European Communities, Karlsruhe (Germany, F.R.). European Inst. for Transuranium Elements
Radiation effects in actinide host phases, 10:43867 (R;US)
Commission of the European Communities, Luxembourg
1983 Annual status report. Operation of the high flux reactor, 10:44327 (R;FR)
Coal gasification in the molten-iron reactor. Performance of coal-gasification trials in a 60-t industrial converter of Eisenwerk-Gesellschaft Maximilianshuette MBH, 10:43632 (R;XE;GE)
Data/evaluation for operator-inspector differences for a specific NDA instrument, 10:44753 (R;XE)
EC (energy conversion) medium-term energy-demand model: present state and recent results, 10:44471 (R;XE)
Exchange of information concerning atmospheric pollution by certain sulfur compounds and suspended particulates in the European Community. Annual report for January to December 1978, 10:45093 (R;FR)
Heating of a laboratory hall by means of a soil heat pump combined with unshielded solar absorbers, 10:44563 (R;FR)
Improved boiler control in food factories. Final report, 10:44567 (R;XE)
Mechanism of photosynthetic oxygen evolution: a study of the primary photoreactions and of electron carriers, 10:44004 (R;XE)
Photochemical dissociation of water in colloidal clay suspensions, 10:44826 (R;XE)
Photosynthetic water oxidation by green plants: on the role of protons, 10:44005 (R;XE)
Physical model of the dispersion of a radioactive contaminant in the atmosphere above a heat island, 10:45124 (R;XE)
Study of heat storage in non-saturated soils: construction of a column for simulation tests of the behavior of a non saturated strata used as storage zone, 10:44101 (R;XE;In French)
Commission of the European Communities, Luxembourg. Directorate-General for Information, Market and Innovation
Biomass gasification project AVSA, 10:43929 (R;XE;In French)
Development and optimisation of cost effective thermal energy storage systems for solar space heating by means of a microprocessor controlled test facility, 10:44102 (R;XE)
European modelling group, 10:44086 (R;XE)
Finite-element formulation of a variational procedure of wind-field adjustment over complex terrain, 10:45075 (R;XE)
Fundamental study of recombination in solar cells with highly doped substrates, 10:43999 (R;XE)
Irish solar pilot test facility, 10:44085 (R;XE)
Italian solar pilot test facility, 10:44084 (R;XE)
Local scale atmospheric diffusion at a coastal site in the presence of breeze effect. (Phase III: Data elaboration and model development). Vol. 1, 10:45074 (R;XE)
Modelling of thermal storage for solar heating systems. Final report. Vol. 2, 10:44066 (R;XE)
Solar space heating systems and domestic hot water, 10:44067 (R;XE)
Temporary thermal insulation in the passive solar utilisation. June 24, 1983, 10:44543 (R;XE;In German)
Wind energy evaluation for the European Communities, 10:44148 (R;XE)
Compagnie Generale des Matieres Nucleaires (COGEMA), Centre de la Hague, 50 - Cherbourg (France)
Elemental analysis of sediments and organisms from the Cape Verde abyssal plain (CV 1 and CV 2 sites), 10:44738 (R;FR;In French)
Confederated Salish and Kootenai Tribes, Pablo, MT (USA)
Impacts of water levels on breeding Canada geese and the methodology for mitigation and enhancement in the Flathead drainage. Annual report, 1984, 10:43966 (R;US)
Conference of Radiation Control Program Directors, Inc., Frankfort, KY (USA)
Suggested state requirements and criteria for a low-level radioactive waste disposal site regulatory program, 10:43862 (R;US)
Connecticut Univ., Storrs (USA). Dept. of Chemical Engineering
Oxygen enrichment of air using semipermeable membranes in a magnetic field. Final report, January 15, 1983-January 14, 1985, 10:44741 (R;US)
Consumers Power Co., Jackson, MI (USA)
Extended Burnup Demonstration Reactor Fuels Program. Annual progress report, April 1983-March 1984, 10:44187 (R;US)
Cornell Univ., Ithaca, NY (USA). Dept. of Agricultural Engineering
Methods to improve the operating coefficient of performance of heat pump water heaters, 10:44524 (R;US)
Cornell Univ., Ithaca, NY (USA). Dept. of Materials Science and Engineering
Diffraction and microscopy studies of the structure of grain boundaries in Fe, Fe-base alloys and ceramic materials. Final technical report, 10:44598 (R;US)
Hydrogen attack in Cr-Mo steels at elevated temperatures. Final technical report, September 1, 1980-August 31, 1983, 10:44600 (R;US)
Cornell Univ., Ithaca, NY (USA). School of Electrical Engineering
Parallel P-code for Parallel Pascal and other high level languages, 10:45922 (R;US)
Council for Mineral Technology, Randburg (South Africa)
Computer programmes for the control and data manipulation of a sequential x-ray-fluorescence spectrometer, 10:45022 (R;ZA)
Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre
Annual report June 1983. [Control system of the NAC accelerator], 10:44989 (R;ZA)
Council for Scientific and Industrial Research, Pretoria (South Africa). National Physical Research Lab.
Proceedings of the symposium on surface science and its industrial implications, incorporating colloquim on Auger electron spectroscopy in South Africa, 10:44577 (R;ZA)
Creare Products, Inc., Lebanon, NH (USA)
Development of a remote coal dust deposition rate monitor. Open file report, 15 September 1978-31 August 1983, 10:43668 (R;US)

D

Dames and Moore, Bethesda, MD (USA)
Methodology for assessing solid waste disposal alternatives for future conversions to coal, 10:43657 (R;US)

Danmarks Tekniske Hoejskole, Lyngby. Afdelingen for Baerende Konstruktioner
Fatigue testing of adhesive bonding between steel and glass-fiber reinforced polyester. Report until December 1982, 10:44601 (R;DK;In Danish)
Fatigue testing of glassfiber-reinforced polyester, 10:44690 (R;DK;In Danish)
Fatigue tests of wing root section for Nibe Windmill B, 10:44143 (R;DK;In Danish)

Danmarks Tekniske Hoejskole, Lyngby. Afdelingen for Fluid Mekanik
Calculation of trajectories and throw-lengths for torn-off windmill blades, 10:44145 (R;DK;In Danish)
CBEAM4. Calculation of eigen oscillations etc. for centrifugally loaded beams, 10:44144 (R;DK;In Danish)

Danmarks Tekniske Hoejskole, Lyngby. Lab. for Varmeisolering
Heat exchange in small solar heating systems, 10:44064 (R;DK;In Danish)
Heat storage by means of chemical heat pumping with aqueous salt solution as absorbent, 10:44444 (R;DK;In Danish)
Insulated shutters, 10:44542 (R;DK)

Decision Focus, Inc., Los Altos, CA (USA)
Utility fuel inventory model: Version 1.0, 10:44503 (R;US)
Value of competitive model testing in the bid evaluation process for hydroelectric turbomachinery. Final report, 10:44505 (R;US)

Defence Research Establishment, Ottawa, Ontario (Canada)
Observations of the use of the Setapoint detector. Technical note, 10:45039 (R;CA;FR)

Delaware Univ., Newark (USA). Inst. of Energy Conversion
Development of stable high efficiency polycrystalline thin-film solar cells based on CuInSe$_2$. Final report, 16 March 1983-15 March 1984, 10:44012 (R;US)

Delegation Generale a la Recherche Scientifique et Technique (DGRST), 75 - Paris (France)
Absorption heat pump using the zeolite/water couple, 10:44532 (R;FR;In French)
Atmospheric pressure fluidized bed coal combustion test, 10:43695 (R;FR;In French)
Development of an air solar collector. Compared balances of air and water systems, 10:44081 (R;FR;In French)
Optimization of a supersonic turbine set through an ammoniac cycle, 10:44156 (R;FR;In French)
"SEVESEM" systems: heat pumps with incorporated energy storage systems, 10:44533 (R;FR;In French)
Study and achievement of a demonstration model of a liquid/liquid plate heat exchanger with a new configuration and corrosion resistant plastic plates, 10:44132 (R;FR;In French)

Delian Corp., San Jose, CA (USA)
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)

Denver Univ., CO (USA). Coll. of Business Administration
Research support for the Residential Conservation Service (RCS) program and other DOE conservation programs. Final report, 10:44534 (R;US)

Denver Univ., CO (USA). Dept. of Engineering
Damage progression in fiber composites during repeated loading. Final report, 10:44688 (R;US)

Department of Energy, Mines and Resources, Ottawa, Ontario (Canada)
Analysis directory of Canadian commercial coals - supplement No. 5, 10:43646 (R;CA)

Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)

[Charge separation in photoredox reactions]. Informal annual technical progress report, October 1, 1982-August 1, 1983, 10:44799 (R;US)

Howard Univ., Washington, DC (USA)
Raman spectroscopy of shocked water, 10:45410 (R;US)

Hughes Research Labs., Malibu, CA (USA)
Optical characterization of nonlinear crystals. Final report, January 15, 1984-September 30, 1984, 10:44720 (R;US)

Hughes Supply, Inc., Orlando, FL (USA)
Polysil structures. Final report, 10:44706 (R;US)

Hydrocarbon Research, Inc., Lawrenceville, NJ (USA)
New technology concept for two-stage liquefaction of coal, 10:43626 (R;US)

I

Idaho Dept. of Water Resources, Boise (USA)
Water information bulletin No. 30, part 13: geothermal investigations in Idaho. Preliminary geologic reconnaissance of the geothermal occurrences of the Wood River Drainage Area, 10:44109 (R;US)

Idaho Univ., Moscow (USA). Cooperative Fishery Research Unit
Effects of handling and crowding on the stress response and viability of chinook salmon parr and smolts. Completion report, 1984, 10:45160 (R;US)

Illinois Inst. of Tech., Chicago (USA)
Mechanism of oil bank formation, coalescence in porous media and emulsion stability. Final report, 10:43717 (R;US)
Zinc/ferricyanide battery development. Phase IV. Final report, 9 May 1983-15 February 1985, 10:44449 (R;US)

Illinois Univ., Urbana (USA)
Grain boundary structure in alumina, 10:44666 (R;US)

Illinois Univ., Urbana (USA). Dept. of Chemistry
Transport and relaxation processes in supercritical fluids. Technical progress report, April 1, 1985-June 30, 1985, 10:43625 (R;US)

Illinois Univ., Urbana (USA). Dept. of Computer Science
Short report and proposal for three-month extension on design, evaluation, and use of high performance computer systems, 10:45910 (R;US)

Illinois Univ., Urbana (USA). Fusion Studies Lab.
CTR plasma engineering studies. Annual progress report, 1 December 1984-30 November 1985, 10:45841 (R;US)

Illinois Univ., Urbana (USA). Graduate Coll.
Spray pyrolysis processing and properties of thin film photovoltaic materials, 10:43996 (R;US)

Impell Corp., Walnut Creek, CA (USA)
Radionuclide correlations in low-level radwaste. Final report, 10:43858 (R;US)

Imperial Coll. of Science and Technology, London (UK). Blackett Lab.
Harmonic generation of ion waves due to Brillouin backscattering, 10:45412 (R;US)

Institute of Gas Technology, Chicago, IL (USA)
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1984, 10:44516 (R;US)

Institute of Nuclear Physics, Krakow (Poland)
Problem of the additional quantum number ω in the decomposition U(3) x U(3) → U(3), 10:45536 (R;PL)

Institute of Nuclear Research, Warsaw (Poland)
Proceedings of the 4. Warsaw symposium on elementary particle physics. Kazimierz, Poland, 24-31 May 1981, 10:45535 (R;PL)

Institute of Paper Chemistry, Appleton, WI (USA)
Development of a cold corrugating process. Final report, 10:44562 (R;US)

Institut Francais du Petrole (IFP), 92 - Rueil-Malmaison
Studies of hydrogen transfer reactions from hydrocarbon transformation in catalytic cracking, 10:44800 (R;FR;In French)

Three phase fluidized bed reactors: hydrodynamic characteristics and mixing of particles, 10:44775 (R;FR;In French)

Institut National Polytechnique, 38 - Grenoble (France)
Influence of different irradiation facilities on the response of radioprotection devices, 10:45011 (R;FR;In French)
Multiline digital radiographic imager study with synchronization to detector gas ion drift, 10:45016 (R;FR;In French)
Properties of amorphous carbon thin films deposited by magnetron pulverization. Application to selective surface for in-vacuum absorbers, 10:44090 (R;FR;In French)
Study of liquid silicium coating by a molten salt. Application to photovoltaic silicium ingot fabrication, 10:44002 (R;FR;In French)

Institut National Polytechnique, 54 - Nancy (France)
Dynamics of latent heat storage in a fixed bed: application to the paraffin impregnated activated carbon, 10:44106 (R;FR;In French)

Institut National Polytechnique, 31 - Toulouse (France)
Contribution to the study of chemical heat pumps: the $CaCl_2$-NH_3-heptanol system, 10:44544 (R;FR;In French)
Lowering storage losses of volatile hydrocarbons by adsorption, 10:43743 (R;FR;In French)

Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)
Modification in the CITATION computer code: change of microscopic cross section by zone, 10:44284 (R;BR;In Portuguese)
Neutron radiography on the research reactor IEA-R1, 10:44328 (R;BR;In Portuguese)
Spectrographic analysis of stainless steels, 10:44746 (R;BR;In Portuguese)
Spectrographic determination of dysprosium in doped crystals of calcium sulfate used for dosimetric material, 10:44747 (R;BR;In Portuguese)

Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)
Competition between collective and single particle excitations in nuclear structure description, 10:45623 (R;RO;In Romanian)
Contributions to the phenomenological study of the rotational bands of even-even and even-odd nuclei, 10:45702 (R;RO;In Romanian)
Contributions to the study of nuclear reactions mechanism induced by heavy ions on intermediate mass nuclei, 10:45625 (R;RO;In Romanian)
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
Moessbauer methods and spectrometers specialized in qualitative and quantitative determinations, 10:44744 (R;RO;In Romanian)
Study of the cumulative effect in meson and nucleonic system production, 10:45632 (R;RO;In Romanian)
Theory of nuclear reactions, with applications to heavy ion scattering reactions, 10:45703 (R;RO)

Institutul Politehnic, Bucharest (Romania)
Correlation between the possibility of laser action and the oscillator strength of the fluorescent transition: pyrylium salts, 10:44885 (TJ;US)

Intellicorp, Menlo Park, CA (USA)
Functional specifications for AI software tools for electric power applications. Final report, 10:44180 (R;US)

International Atomic Energy Agency, Vienna (Austria)
Surficial uranium deposits. Report of the Working Group on Uranium Geology organized by the IAEA, 10:43793 (R;AT)
Uranium biogeochemistry: A bibliography and report on the state of the art. Report prepared by the Biogeochemical Prospecting for Uranium Working Group, a subgroup of the Joint NEA/IAEA Group of Experts in R and D in uranium exploration techniques, 10:43794 (R;XA)
Waste management research abstracts No. 15, 10:43859 (R;XA)
Work within the coordinated programme on studying the physical and isotopic behaviour of soil moisture in the zone of aeration. Final report for the period 1 April 1981-31 October 1984, 10:45133 (R;XA;In French)

International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee
Progress in fission product nuclear data. Information about activities in the field of measurements and compilations/evaluations of fission product nuclear data (FPND), 10:45572 (R;XA)

International Atomic Energy Agency, Vienna (Austria). International Working Group on Fast Reactors
Specialist meeting on mechanical properties of structural materials including environmental effects, Chester, England, 10-14 October 1983, 10:44633 (R;AT)

International Centre for Theoretical Physics, Trieste (Italy)
Ground state energy of two-dimensional electrons in strong magnetic fields: small clusters in fractional occupation, 10:45754 (R;XA)
Special function on nonselfdual cones, 10:45771 (R;XA)

International Labour Organization, Geneva (Switzerland)
Safety in the use of asbestos: an ILO (International Labour Office) code of practice, 10:45107 (R;CY)

International Trade Administration, Washington, DC (USA)
Potential for US steam-coal imports, 10:43707 (R;US)

Intersol Power Corp., Lakewood, CO (USA)
Development and fabrication of photovoltaic concentrator modules for a point-focus Fresnel lens array, 10:44008 (R;US)
Installation of a modular building block photovoltaic concentrator array field, 10:44007 (R;US)

Iowa State Univ. of Science and Technology, Ames (USA)
Laser excited atomic fluorescence spectrometry as a tool for chemical analysis, 10:44769 (D;US)
New examples of clusters, extended metal-metal bonding and interstitial derivatives, 10:44778 (R;US)
Study of charm production in proton-proton interactions at $\sqrt{s}$ = 62 GeV with a forward K-trigger, 10:45463 (D;US)
Theoretical study of parton fragmentation and evolution into hadrons, 10:45527 (D;US)
Upper limit for the methane-oxygen initiation reaction in the presence of iodine-131 behind reflected shock waves, 10:44794 (D;US)

Iowa State Univ. of Science and Technology, Ames (USA). Dept. of Engineering Science and Mechanics
Application of scanning electron microscopy and automated image analysis for characterization of mineral matter in coal, 10:43653 (R;US)

Israel Chemical Society, Tel-Aviv
50. Anniversary meeting. Program and abstracts, 10:44777 (R;IL)

J

Japan Atomic Energy Research Inst., Tokai, Ibaraki
Behavior of the Zircaloy cladding tube in a mixed gas of hydrogen and steam, 10:44440 (TG;US)
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)

Japan Atomic Energy Research Inst., Tokyo
Diffusion phenomena of fluorine and cations in molten Li_2BeF_4, $LiBeF_3$ and $NaBeF_3$, 10:44780 (R;JP)
Effects of pressure on the first-order phase transition of Cu_4SnS_4 and Cu_8GeS_6, 10:44779 (R;JP;In Japanese)
Evaluation of neutron nuclear data for ^{246}Cm and ^{247}Cm, 10:45678 (R;JP)
Preparation of zirconium and zirconium-base alloy certified reference materials JAERI-Z11 to -Z18, 10:44634 (R;JP;In Japanese)
Radiolysis of methane-ethylene and methane-ethane mixtures flow system induced by electron irradiation using none-recycling, 10:44836 (R;JP;In Japanese)

Jet Propulsion Lab., Pasadena, CA (USA)
Low-Cost Solar Array Project. Ninth project integration meeting handout, April 12-13, 1978, 10:44003 (R;US)
Radiation data for design and qualification of nuclear plant equipment. Final report, 10:44291 (R;US)

Johns Hopkins Univ., Silver Spring, MD (USA). Applied Physics Lab.
Photoeffects of semiconductor electrolyte interfaces. Final report, 1979-1984, 10:44821 (R;US)

Joint FAO/IAEA Div. of Isotope and Radiation Applications of Atomic Energy for Food and Agricultural Development, Vienna (Austria)
Use of irradiation as a quarantine treatment of agricultural commodities. Final report of a consultants group meeting organized by the Joint FAO/IAEA Division of Isotope and Radiation Applications of Atomic Energy for Food and Agricultural Development and held in Honolulu, Hawaii, 21-23 November 1983, 10:45227 (R;AT)
Joint Inst. for Nuclear Research, Dubna (USSR)
Problem of low energy neutron inelastic scattering on the ^{153}Sm nucleus, 10:45655 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Analysis of correlation effects in multinucleon CC interactions at 4.2 GeV/c per nucleon in terms of collective variables, 10:45606 (R;SU)
Characteristics of the particle production process in hadron-nucleus collisions: multiplicities and dispersions, 10:45643 (R;SU)
Free path length of neon-22 fragments in photoemulsion at 4.1 A GeV/c momentum and anomalon problem, 10:45614 (R;SU;In Russian)
Pion absorption in the ^{4}Hep - dppn reaction, 10:45590 (R;SU;In Russian)
Total disintegration of lead nuclei by ^{12}C nuclei at 4.5 A GeV/c momentum, 10:45662 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics
Differential neutron scattering cross sections and average neutron parameters of cadmium isotopes, 10:45648 (R;SU;In Russian)
Level scheme of ^{144}Nd from the (n,2γ) reaction, 10:45650 (R;SU;In Russian)
Measurements of total cross sections of molybdenum and cadmium in the 20-1100 keV range on neutron filtered beam, 10:45649 (R;SU;In Russian)
Right-left asymmetry of γ quanta yield in a neutron resonance of ^{117}Sn with parity nonconservation, 10:45647 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems
Cycle-by-cycle analysis of muon catalysed fusion in a one-component medium, 10:45593 (R;SU)
Determination of optimal conditions for the experimental investigation of muon catalysis of nuclear reaction t+t $\rightarrow$ ^{4}He+2n, 10:45591 (R;SU)
Determination of parameters of the muon catalysis process from thee analysis of experimental time distribution of successively detected events of fusion reactions, 10:45594 (R;SU;In Russian)
Determination of the multiple muon catalysis process parameters, 10:45592 (R;SU)
Excited states of the odd-odd ^{132}La nucleus, 10:45640 (R;SU;In Russian)
Factors determinating the shape of survival curves of Escherichia coli cells irradiated by ionizing radiation with different LET. Peculiarities of genome organization and the shape of survival curves, 10:45233 (R;SU;In Russian)
Internal conversion electrons in the ^{134}Ce decay and ^{134}La levels, 10:45639 (R;SU;In Russian)
Investigation of the ^{133}Ce internal conversion electron spectrum, 10:45638 (R;SU;In Russian)
Successively detected events of the multiple muon catalysis process, 10:45596 (R;SU;In Russian)
Way of estimating the efficiency of the effect of ionizing radiation and magnetic fields on phage's induction in lysogenic culture of bacteria, 10:45232 (R;SU;In Russian)
Yeast survival after gamma-irradiation. The effect of delayed colony appearance and determination of relative part of undamaged cells, 10:45234 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions
Nuclear ultrafilters, 10:44691 (R;SU;In Russian)
Search for superheavy in thermal waters of the Baikal rift zone, 10:45677 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics
Analysis of form factors of electric transitions in light nuclei with the use of electromagnetic current continuity equation, 10:45608 (R;SU;In Russian)
Calculation of total cross sections of the hadron- nucleus interaction at low energies, 10:45595 (R;SU;In Russian)
Decay of heavy nuclei with cluster emission, 10:45676 (R;SU;In Russian)
Electric transitions from octupole states in ^{158}Dy and ^{168}Er nuclei, 10:45656 (R;SU;In Russian)
Excitation of states with a different lambdasup(π) in the inelastic electron scattering at backward angles, 10:45644 (R;SU)
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
Intensified and asymmetric barrier penetration of nuclear slabs in time-dependent Hartree-Fock approximation, 10:45707 (R;SU)
Intrinsic geometry of N=2 supersymmetry and supergravity, 10:45562 (R;SU)
Investigation of the reaction ^{16}O(p,n)^{16}F at Esub(p)=135 MeV, 10:45607 (R;SU)
Microscopic approach to the description of heavy-ion elastic scattering, 10:45645 (R;SU)
N=4 supersymmetric Liouville equation, 10:45772 (R;SU;In Russian)
Nuclear decay by emission of charged particle-superasymmetric fission process, 10:45675 (R;SU)
TDHF-motivated macroscopic model for heavy ion collisions: a comparative study, 10:45708 (R;SU)
Transversal E1-resonance in spherical nuclei, 10:45619 (R;SU;In Russian)
Joint Task Force 132, Washington, DC (USA)
Report of Project 1-M-54 on thirty service men exposed to residual radiation at Operation castle, 10:45065 (R;US)

Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel, 10:45856 (R;US)
Model equations for high current transport, 10:44960 (R;US)
Numerical calculation of complex shock reflections in gases, 10:45409 (R;US)
Numerical solution of boundary condition to POISSON's equation and its incorporation into the program POISSON, 10:44957 (R;US)
Properties of ethylene carbonate and its use in electrochemical applications: a literature review, 10:44807 (R;US)
Software tools programmer's manual, 10:45919 (R;US)
Solar radiant processing of gas-particle systems for producing useful fuels and chemicals, 10:44091 (R;US)
Suppression of propagating TE modes in the FNAL antiproton source stochastic beam cooling system, 10:44956 (R;US)
Theoretical analysis of the aging response of Al-Li alloys strengthened by Al_3Li precipitates, 10:44638 (R;US)
Transportable charge in a periodic alternating gradient system, 10:44959 (R;US)
Vibrational predissociation spectroscopy of hydrogen cluster ions, 10:45397 (R;US)

Lawrence Livermore National Lab., CA (USA)

Acceleration of compact torus plasma rings in a coaxial rail-gun, 10:45785 (R;US)
Analysis of dislocation kinetics across shocks, 10:45746 (R;US)
Application of the coupled fluid-structure code PELE-IC to pressure-suppression analysis: annual report to NRC for 1979, 10:44374 (R;US)
Approach to the quantification of seismic margins in nuclear power plants, 10:44416 (R;US)
Calculating the vulnerability of synthetic polymers to autoignition during nuclear flash. Final report, 10:45068 (R;US)
Changes in major organic contaminants in the groundwater at the Hoe Creek underground coal gasification site, 10:43671 (R;US)
Characteristics of the dynamic loading in a full scale multivent BWR pressure suppression system, 10:44435 (R;US)
Characterization and evaluation of a turbine disc section containing a service crack, 10:44213 (R;US)
Computer simulation and analysis of the expanding ring test, 10:44648 (R;US)
Concentration and speciation of copper in waters collected near the San Onofre and Diablo Canyon Nuclear Power Stations, 10:44318 (R;US)
Condensed matter at high shock pressures, 10:45401 (R;US)
Correlation between the possibility of laser action and the oscillator strength of the fluorescent transition: pyrylium salts, 10:44885 (TJ;US)
Data acquisition with real-time plots, 10:44871 (R;US)
Deposition of selenium coatings on beryllium foils. Revision 1, 10:44646 (R;US)
Determination of somatic mutations in human erythrocytes by cytometry, 10:45250 (R;US)
Earthquake safety program at Lawrence Livermore National Laboratory, 10:44910 (R;US)
Electromagnetic effects in relativistic electron beam plasma interactions, 10:44961 (R;US)
ELF-VLF Communications through the Earth Project report for calendar year 1984. Revision 1, 10:44870 (R;US)
Elimination of electromagnetic radiation in plasma simulation: the Darwin or magnetoinductive approximation, 10:45784 (R;US)
Engineering research progress report, FY84, 10:44867 (R;US)
Evaluation of cracking in feedwater piping adjacent to the steam generators in Nine Pressurized Water Reactor Plants, 10:44232 (R;US)
Experiment to measure the electron neutrino mass using frozen tritium, 10:45422 (R;US)
Final results of the Hydrogen Igniter Experimental Program, 10:44411 (R;US)
GRAFL-II: user oriented science graphics, 10:45921 (R;US)
Harmonic generation of ion waves due to Brillouin backscattering, 10:45412 (R;US)
High-pressure ion-thermal properties of metals from ab initio interatomic potentials, 10:44649 (R;US)
Initial stages of uranium oxidation: a surface study, 10:43812 (R;US)
Inversion of Rayleigh wave phase velocities between RSNT and RSON, 10:45305 (R;US)
Investigation of subsurface structure with borehole gravimetry, 10:43716 (R;US)
Investigation of the cryogenic mechanical properties of low thermal-expansion superalloys, 10:44647 (R;US)
Load Combination Program. Progress report No. 6. Vol. 2, 10:44382 (R;US)
Metallurgical analysis of a 304L stainless steel canister from the Spent Fuel Test - Climax, 10:44643 (R;US)
One dimensional polaron effects and current inhomogeneities in sequential phonon emission, 10:44722 (R;US)
Optimization aspects of the ARAC real-time radiological emergency response system, 10:45130 (R;US)
Parallel P-code for Parallel Pascal and other high level languages, 10:45922 (R;US)
Probability of pipe fracture in the primary coolant loop of a PWR Plant. Volume 3. Nonseismic stress analysis. Load Combination Program, Project I final report, 10:44407 (R;US)
Radionuclide Migation Project 1984 progress report, 10:45180 (R;US)
Raman spectroscopy of shocked water, 10:45410 (R;US)
Reaction of chlorine trifluoride with water, 10:44796 (TJ;US)
Real-time computing of the environmental consequences of an atmospheric accidental release of radioactive material: user's point of view, 10:45131 (R;US)
Real-time fluid flow model for control of solidification, 10:43811 (R;US)
Seismic review of Dresden Nuclear Power Station, Unit 2, for the systematic evaluation program, 10:44373 (R;US)
Seismic review of the Oyster Creek Nuclear Power Plant as part of the Systematic Evaluation Program, 10:44398 (R;US)
Seismic review of the Palisades Nuclear Power Plant Unit 1 as part of the Systematic Evaluation Program, 10:44390 (R;US)
Simplified seismic probabilistic risk assessment: procedures and limitations, 10:44415 (R;US)
Solution of the field equations for 2-D electromagnetic direct implicit plasma simulation, 10:45411 (R;US)
Special topics reports for the reference tandem mirror fusion breeder. Volume 5. Neutronic issues and optimization, 10:45858 (R;US)
Spent fuel cladding corrosion under tuff repository conditions: initial observations, 10:44644 (R;US)
Statistical comparison of two major gridded temperature records of the northern hemisphere, 10:45078 (R;US)
Summary of TMX-U results, 1984. Volume 1, 10:45859 (R;US)
Systems interaction: state-of-the-art review and methods evaluation, 10:44391 (R;US)
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the San Onofre Nuclear Power Station, Unit 1, 10:44430 (R;US)
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Beaver Valley Nuclear Power Station, Unit 1, 10:44431 (R;US)
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Trojan Nuclear Power Plant, 10:44432 (R;US)
Technical evaluation of the susceptibility of safety-related systems to flooding caused by the failure of non-Category I systems for the Maine Yankee Atomic Power Station, 10:44433 (R;US)

Technical evaluation of the susceptibility of safety-related systems to flooding caused by the failure of non-Category I systems for Surry Units 1 and 2, 10:44434 (R;US)
Theoretical models for Type I and Type II supernova, 10:45335 (R;US)
Thin-thick quadrature frequency conversion, 10:45861 (R;US)
Ultimate limits of FT-IR, 10:45047 (R;US)
Variation in baseline sister chromatid exchange frequencies in humans, 10:45197 (R;US)
Variation of transmittance spectra of porous antireflection coatings with index profile, 10:44721 (R;US)

Calorimeter for measuring 1-15 kJ laser pulses. Final report, 10:44879 (R;US)
Recent developments in self-contained cryocoolers for SQUIDS and other low-power cryoelectronic devices. Final report, 10:44864 (R;US)

National Bureau of Standards, Boulder, CO (USA). Quantum Physics Div.
Configuration interaction in multiphoton ionization. Final report, 10:45398 (R;US)
Progress report on the analysis of long exposure SWP high-resolution spectra of cool stars. Final report, 10:45332 (R;US)

National Bureau of Standards, Washington, DC (USA)
Design and analysis of passive-solar-heating solutions for neighborhood commercial-strip settings. Final report, 10:44075 (R;US)
Flow-rate calibration for solar heating and cooling system evaluation. Final report, 10:44076 (R;US)
NBSGSC - a FORTRAN program for quantitative x-ray fluorescence analysis. Technical note (final), 10:44755 (R;US)
Radiometry using synchrotron radiation. Final report, 10:45045 (R;US)

National Bureau of Standards, Washington, DC (USA). Center for Building Technology
Molecular and microstructural factors affecting mechanical properties of polymeric cover plate materials, 10:44093 (R;US)

National Bureau of Standards, Washington, DC (USA). Solar Energy Program
Revisions included in HUD Intermediate Minimum Property Standards Supplement 4930.2, 1977 edition: solar heating and domestic hot-water systems, 10:44078 (R;US)

National Electrostatics Corp., Middleton, WI (USA)
Arc discharge conditioning test on the Oak Ridge 25 URC accelerator, 10:44931 (R;US)

National Engineering Lab. (NBS), Washington, DC (USA)
Weatherization of residences: criteria for retrofit materials and products, 10:44547 (R;US)

National Marine Fisheries Service, Seattle, WA (USA). Coastal Zone and Estuarine Studies Div.
Effects of flow on the migratory behavior and survival of juvenile fall and summer chinook salmon in John Day Reservoir. Annual report, FY 1983, 10:45152 (R;US)
Imprinting salmon and steelhead trout for homing. Annual report, 1983, 10:43959 (R;US)
Smolt passage behavior and flow-net relationships in the forebay of John Day Dam. Annual report, 1983, 10:45153 (R;US)
Snake River Fall Chinook Salmon Broodstock Program, 1983. Annual progress report, 10:43961 (R;US)
Study to determine the biological feasibility of a new fish tagging system. Annual report, 1983, 10:45154 (R;US)
Use of a fish transportation barge for increasing returns of steelhead imprinted for homing, 1983. Annual report, 10:43960 (R;US)

National Oceanic and Atmospheric Administration, Boulder, CO (USA). Environmental Research Labs.
Solar cycle variation of ephemeral regions. Final report, 1 November 1983-1 November 1984, 10:45323 (R;US)

National Oceanic and Atmospheric Administration, Oak Ridge, TN (USA). Atmospheric Turbulence and Diffusion Lab.
Preliminary estimates of airborne pollutant fluxes to the Camp Branch and Cross Creek watersheds, 10:45088 (R;US)

National Ocean Service, Anchorage, AK (USA). Ocean Assessments Div.
Environmental assessment of the Alaskan Continental Shelf. Final reports of principal investigators. Volume 3. Physical science studies, 10:45164 (R;US)

Naval Civil Engineering Lab., Port Hueneme, CA (USA)
Evaluation of a commercially available single building EMCS (energy monitoring control system). Final report, October 1981-September 1984, 10:44520 (R;US)

Field and wind-tunnel testing on natural-ventilation cooling effects on three Navy buildings. Final report, October 1982-September 1983, 10:44521 (R;US)
Hangar heating and energy conservation manual. [Final report, October 1979-September 1983], 10:44531 (R;US)

Naval Postgraduate School, Monterey, CA (USA)
Design consideration for the x-ray Cherenkov experiment. Master's thesis, 10:45038 (R;US)
Target vulnerability to air defense weapons. Master's thesis, 10:45052 (R;US)

Naval Radiological Defense Lab., San Francisco, CA (USA)
Radioactive contamination of ventilation supply system, USS Crittenden, from Baker Explosion, Operation Crossroads. Final report, 10:45066 (R;US)

Naval Research Lab., Washington, DC (USA)
Effect of focusing field nonlinearities in MBE-4 on transverse beam dynamics, 10:44958 (R;US)
Kalman-Filter time-series analysis of gamma-ray data from NaI(Tl) detectors for the ND6620 computer. Final report, 10:45569 (R;US)
Low-frequency instabilities driven by an ion-temperature anisotropy. Memorandum report, October 1984-October 1985, 10:45778 (R;US)
Piping inelastic fracture mechanics analysis, 10:44294 (R;US)

Naval Ship Research and Development Center, Annapolis, MD (USA)
Benefits of spirally enhanced tubes for steam condensers in minimum-weight cooling systems. Final report, 10:44887 (R;US)

Naval Surface Weapons Center, Silver Spring, MD (USA)
Constant-current discharge tests of a 12 d cell in-series Li/SO_2 battery pack under-counter arm-decoy requirements. Final report for FY 82, 10:44446 (R;US)

Naval Surface Weapons Center, Silver Spring, MD (USA). White Oak Lab.
Numerical calculation of complex shock reflections in gases, 10:45409 (R;US)

Nebraska Energy Office, Lincoln (USA)
Implications and management of resource constraints: a community model for international development, 10:44457 (R;US)

Netherlands Energy Research Foundation, Petten
Determination of calibration equations by means of the generalized least squares method, 10:45911 (R;NL)
FURNACE; a toroidal geometry neutronic program system method description and users manual, 10:45842 (R;NL)
Phased mission analysis of maintained systems. A study in reliability and risk analysis, 10:44343 (R;NL)

New Mexico Engineering Research Inst., Albuquerque (USA)
Structural analysis of the NNWSI Exploratory Shaft, 10:43874 (R;US)

New Mexico Inst. of Mining and Technology, Socorro (USA)
6th International symposium on environmental biogeochemistry. Final report. Summary, 10:45136 (R;US)

New Mexico Inst. of Mining and Technology, Socorro (USA). Dept. of Metallurgical and Materials Engineering
Microstructural and mechanical property evaluation of solar collectors. Final report, 10:44082 (R;US)

New Mexico Solar Energy Inst., Las Cruces (USA)
Performance monitoring of the Sunmat laundromat. Final report, 10:44072 (R;US)

New Mexico Univ., Albuquerque (USA). Dept. of Chemical and Nuclear Engineering
Influence of shock compression on the specific surface area of inorganic powders, 10:44784 (R;US)

New Mexico Univ., Albuquerque (USA). Dept. of Geology
EXAFS studies of metamict materials, 10:44703 (R;US)

New Mexico Univ., Albuquerque (USA). Dept. of Mathematics
Catastrophic planar dechanneling in strained-layer superlattices, 10:45399 (R;US)

Nez Perce Tribe, Lapwai, ID (USA). Fisheries Resource Management
Biological and physical inventory of Clear Creek, Orofino Creek, and the Potlatch River, tributary streams of the Clearwater River, Idaho. Final report, 10:45159 (R;US)

NLO, Inc., Cincinnati, OH (USA). Feed Materials Production Center
Feed Materials Production Center environmental monitoring annual report for 1984, 10:43891 (R;US)

North Carolina State Univ., Raleigh (USA)
Shock synthesis of nickel aluminides, 10:44641 (R;US)

North Carolina Univ., Chapel Hill (USA). Dept. of Physics and Astronomy
Catastrophic planar dechanneling in strained-layer superlattices, 10:45399 (R;US)

North Dakota Univ., Grand Forks (USA)
Role of iron sulfides stoichiometry in the direct liquefaction of coal, 10:43620 (R;US)

Northern States Power Co., Minneapolis, MN (USA)
Alternative fuel firing in an atmospheric fluidized-bed combustion boiler. Final report, 10:43953 (R;US)

Northrup, Inc., Hutchins, TX (USA)
Development of solar assisted heat pumps for the heating and cooling of buildings. Volume I. Final technical report, February 1, 1978-June 30, 1980, 10:44059 (R;US)

Northwestern Univ., Evanston, IL (USA). Dept. of Civil Engineering
Radon transport from uranium mill tailings via plant transpiration. Final report, 10:45144 (R;US)

Nuclear Development Corp. of South Africa (Pty.) Ltd., Pelindaba, Pretoria
Environmental radioactivity at the National Nuclear Research Centre, Pelindaba. Report for the year 1983, 10:45178 (R;ZA)
Summary of investigations carried out prior to 19 October 1984 regarding the location of the Vaalputs radioactive waste disposal site for the burial of intermediate and low-level waste, 10:43866 (R;ZA)
World mineral energy resources and their distribution in time and space, 10:44462 (R;ZA)

Nuclear Regulatory Commission, Washington, DC (USA)
Behavior of the Zircaloy cladding tube in a mixed gas of hydrogen and steam, 10:44440 (TG;US)
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Identification of the oscillation behavior and system parameter estimation of pressure and core vessel of nuclear power plant BIBLIS-A, 10:44439 (TG;US)
Investigation of the phenomena occurring within a multi-compartment containment after rupture of the primary cooling circuit in water cooled reactors, 10:44438 (TG;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Rules and Records
NRC Regulatory Agenda. Quarterly report, April-June 1985. Volume 4, No. 2, 10:44278 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Technical Information and Document Control
Nuclear Regulatory Commission issuances. Volume 21, No. 5, 10:44277 (R;US)
Regulatory and technical reports (Abstract Index Journal). Second quarter, April-June 1985. Vol. 10, No. 2, 10:44275 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Inspection and Enforcement
Enforcement actions: significant actions resolved. Quarterly progress report, April-June 1985. Volume 4, No. 2, 10:44279 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
Technical Specifications: Fermi-2 (Docket No. 50-341). Appendix A to License No. NPF-43, 10:44280 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
Research program plan. Non-destructive examination. Volume 4, 10:44311 (R;US)
Research program plan: steam generators, 10:44292 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Resource Management
Operating reactors licensing actions summary. Volume 5, No. 6, 10:44276 (R;US)

NWT Corp., San Jose, CA (USA)
Effect of feedwater oxygen control at the Vermont Yankee BWR, 10:44210 (R;US)

Simplified model for computing pipe-to-pipe impact response, 10:44865 (R;US)
Technology, safety and costs of decommissioning a Reference Boiling Water Reactor Power Station. Main report. Volume 1, 10:44368 (R;US)
Technology transfer is opportunity transfer, 10:44465 (R;US)
Understanding, testing and development of stochastic approaches to hydrologic flow and transport through the use of the multigrid method and synthetic data sets, 10:45291 (R;US)
Palm Beach Junior Coll. Foundation, Inc., Lake Worth, FL (USA)
AQUAHOL: a developmental project. Technical progress report, November 1980-July 1981, 10:43995 (R;US)
Paraiba Univ., Joao Pessoa (Brazil). Dept. de Fisica
Supersymmetry-supergravity, 10:45565 (R;BR;In Portuguese)
Paris-12 Univ., 94 - Creteil (France)
Modelisation of soluble aerosols behaviour in the atmosphere of a PWR nuclear reactor in case of accident, 10:44216 (R;FR;In French)
Paris-6 Univ., 75 (France)
Contribution to the study of heavy hydrocarbon fires, 10:43747 (R;FR;In French)
Contribution to the study of spontaneous breakdown of the chiral symmetry in gauge theories, 10:45538 (R;FR;In French)
Experimental study of electronic electrostatic waves detected in the terrestrial magnetosphere by the satellite GEOS 2, 10:45341 (R;FR;In French)
Experimental study of the role of autoionizing states of H_2 (D_2) in the production of energetic protons (deuterons) by electron impact, 10:45351 (R;FR;In French)
Interstellar origin atomic hydrogen in the solar system: modelling and application to analysis of Lyman alpha result (intensity and line profile) from Prognoz 5 and 6 satellites, 10:45326 (R;FR;In French)
Investigation into the Darrieus wind turbines. Characteristics and performance of a troposkian in a stream tubes and flow expansion theory, 10:44149 (R;FR;In French)
Numerical methods for heat storage, 10:44103 (R;FR;In French)
Structure of the temperature field in a cold turbulent flame, 10:44851 (R;FR;In French)
Thermal study of a facility for dry storing bare irradiated PWR fuel elements, 10:43821 (R;FR;In French)
Very low frequency valuation of a modulated beam of electrons: an application to the ARAKS experiment, 10:45343 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France)
Contribution to very inelastic collisions. Emission mechanism of light charged particles and angular momentum transfer in ^{40}Ar (280 MeV) + ^{58}Ni nuclear reactions, 10:45617 (R;FR;In French)
Free electron laser on the ACO storage ring, 10:44928 (R;FR;In French)
Renormalisation and completely integrable theory, 10:45552 (R;FR;In French)
Study of optical properties of protactinium IV ($5f^1$) in $ThBr_4$ and $ThCl_4$ matrices, 10:44844 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire
1983. Annual progress report. [Nuclear physics research program], 10:45575 (R;FR;In French)
Comparative study of ($^3He,\pi^-$) and ($^3He,\pi^+$) exclusive reactions on ^7Li and ^{12}C, 10:45602 (R;FR)
Contribution to the study of spontaneous breakdown of the chiral symmetry in gauge theories, 10:45538 (R;FR;In French)
Energy dissipation in nucleus-nucleus collisions around 40 MeV per nucleon. New phenomena or transition trends, 10:45633 (R;FR)
High energy structures in heavy ion collisions: a multiphonon description, 10:45661 (R;FR)
High resolution spectrometry: how the analyzer and spectrometer performances and the beam emittance contribute to the results obtained, 10:45018 (R;FR;In French)
Influence of left right asymmetry degrees of freedom in self-consistent calculation of ^{20}Ne, 10:45704 (R;FR)
Interpretation of duoplasmatron-type ion sources from a model of the discharge, 10:45352 (R;FR;In French)
Optical properties of the electrostatic mirror: application to the Orsay project, 10:44977 (R;FR;In French)
Order αsub(s) corrections to nucleon axial form factors in the bag model, 10:45561 (R;FR)
Pauli-Guersey symmetry in gauge theories, 10:45537 (R;FR)
Relativistic quantum mechanics of two interacting spinless particles, 10:45756 (R;FR)
Self-consistent light-quark qqq and qq anti q anti q mass spectrum, 10:45507 (R;FR)
Solid state physics and actinide spectroscopy with $ThBr_4$ and $ThCl_4$, 10:44668 (R;FR)
Study of optical properties of protactinium IV ($5f^1$) in $ThBr_4$ and $ThCl_4$ matrices, 10:44844 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire
Analysis and realization of a high resolution trigger for DM2 experiment, 10:45019 (R;FR;In French)
Parks (Richard W.), Seattle, WA (USA)
Estimating response to time-of-use rates: implications of the homothetic separability assumption. Final report, 10:44504 (R;US)
Pennsylvania State Univ., University Park (USA)
Fish and food organisms in acid mine waters of Pennsylvania, 10:43666 (R;US)
Pennsylvania State Univ., University Park (USA). Coll. of Earth and Mineral Sciences
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Pennsylvania State Univ., University Park (USA). Dept. of Mechanical Engineering
Manual for the thermal and hydraulic design of direct contact spray columns for use in extracting heat from geothermal brines, 10:44133 (R;US)
Pennsylvania Univ., Philadelphia (USA). Dept. of Mechanical Engineering and Applied Mechanics
Test facility for the solar-powered/fuel-assisted hybrid Rankine cycle ('SSPRE'). A Phase III report, 10:44061 (R;US)
Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.). Forschungs- und Messreaktor
Dosimetric quantities in the ICRU sphere for neutron irradiation with energies between thermal and 20 MeV, 10:45741 (R;DE)

Ply International, Inc., Wimberley, TX (USA)
Tubular pneumatic conveyor pipeline. Final technical report, 10:44855 (R;US)
Polytechnic Inst. of New York, Farmingdale (USA). Dept. of Electrical Engineering
Millimeter-wave generation by relativistic electron beams. Annual report, 1 October 1983-30 September 1984, 10:45777 (R;US)
Princeton Univ., NJ (USA). Dept. of Mechanical and Aerospace Engineering
Structure of high-speed sprays. Final report, 1 July 1981-30 June 1984, 10:44919 (R;US)
Princeton Univ., NJ (USA). Plasma Physics Lab.
Confinement studies in TFTR, 10:45857 (R;US)
Dynamics of disruptive instability growth in a tokamak, 10:45820 (TG;US)
Ion-cyclotron heating with low dissipation in T-10 tokamak, 10:45823 (TG;US)
"Mode locking" of plasma helical instability in a tokamak, 10:45821 (TG;US)
Modeling of plasma heating with neutral beam injection in T-11 machine, 10:45822 (TG;US)
Stability of tokamak magnetic configuration with a poloidal divertor, 10:45894 (TG;US)
Statistics of Poincare recurrences and the structure of the stochastic layer of a nonlinear resonance, 10:45774 (TG;US)
Purdue Univ., Lafayette, IN (USA)
MOD silver metallization for photovoltaics. Final technical report, December 1, 1983-May 31, 1985, 10:43997 (R;US)
Purdue Univ., Lafayette, IN (USA). School of Mechanical Engineering
Performance assessment of OTEC power systems and thermal power plants. Final report. Volume I, 10:44025 (R;US)
Performance assessment of OTEC power systems and thermal power plants. Final report. Volume II. Users' manual for PACC-OTECs, 10:44026 (R;US)

R

Radian Corp., Austin, TX (USA)
Model for evaluation of refinery and synfuels VOC (volatile organic compounds) emission data. Volume 1. Technical report and Appendix A. Final report, June 1983-September 1984, 10:45105 (R;US)
Model for evaluation of refinery and synfuels VOC (volatile organic compounds) emission data. Volume 2. Appendices B and C. Final report, June 1983-September 1984, 10:45106 (R;US)
Radian Corp., Research Triangle Park, NC (USA)
Industrial boiler SO_2 cost report, 10:45100 (R;US)
Radievyj Inst., Leningrad (USSR)
Efficiency of neutron detection by the system of liquid scintillation counters. Calculation program for neutron transport with E < 20 MeV, 10:45025 (R;SU;In Russian)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

Pion Minus Reactions
Two particle correlations in pion-nucleus interactions at 40 GeV/c, 10:45505 (RA;PL)
Pionic Atoms
Anomalous strong interaction in pionic atoms of Mg and Al, 10:45358 (RA;DE)
ALUMINIUM 27 TARGET
Alpha Reactions
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Carbon 12 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
Electron Reactions
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)
Neutron Reactions
Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range, 10:45612 (RA;JP;In Japanese)
Nitrogen 14 Reactions
Subthreshold pion production in nucleus-nucleus collisions what is the mechanism, 10:45682 (R;DE)
Oxygen 18 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
Spallation
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Uranium 238 Reactions
Dynamics of the mass asymmetry, 10:45685 (RA;DE)
ALUMINIUM ALLOYS
Critical Current
Development of high performance superconductors by powder metallurgy, 10:44875 (J;US)
Microstructure
TEM-APFIM investigation of boron-doped Ni_3Al, 10:44589 (R;US)
Precipitation Hardening
Theoretical analysis of the aging response of Al-Li alloys strengthened by Al_3Li precipitates, 10:44638 (R;US)
Segregation
Quantitative interpretation of surface segregation in air-exposed intermetallic compounds: UNiAl as a test case, 10:44655 (J;CH)
Synthesis
Shock synthesis of nickel aluminides, 10:44641 (R;US)
ALUMINIUM OXIDES
See also SPINELS
Compression
Influence of shock compression on the specific surface area of inorganic powders, 10:44784 (R;US)
Grain Boundaries
Grain boundary structure in alumina, 10:44666 (R;US)
Ion Implantation
Amorphization of ceramics by ion beams (Zr+, Cr^+, N^+, and Nb^+ ion implantation), 10:44677 (J;CH)
Analytical electron microscopy of surface modified ceramics, 10:44664 (R;US)
Annealing studies of alpha-Al_2O_3 implanted with bromine, 10:44663 (R;US)
Preparation of backthinned ceramic specimens, 10:44739 (R;US)
Mechanical Properties
Microstructural damage in neutron-irradiated spinel, 10:45835 (RA;US)
Microstructure
Grain boundary structure in alumina, 10:44666 (R;US)
Physical Radiation Effects
Amorphization of ceramics by ion beams (Zr+, Cr^+, N^+, and Nb^+ ion implantation), 10:44677 (J;CH)
Influence of high energetic irradiations with heavy ions on the magnetic properties of ferrimagnetic iron granates, 10:44667 (R;DE;In German)
Microstructural damage in neutron-irradiated spinel, 10:45835 (RA;US)
Sliding Friction
Selection and qualification of materials for relative motion and electrical isolation in a vacuum environment, 10:44685 (J;CH)

Surface Area
Influence of shock compression on the specific surface area of inorganic powders, 10:44784 (R;US)
ALUMINIUM-AIR BATTERIES
Research Programs
Aluminum/air battery development. Final report, 10:44450 (R;US)

AMBIENT TEMPERATURE
Data Analysis
Statistical comparison of two major gridded temperature records of the northern hemisphere, 10:45078 (R;US)
AMERICIUM
Solvent Extraction
Lanthanides and trivalent actinides complexation by tripyridyl triazine, applications to liquid-liquid extraction, 10:43818 (R;FR;In French)
Voltametry
Coulometric determination of americium and curium for the preparation of reference solutions, 10:44737 (R;FR)
AMERICIUM 243
Diffusion
Geochemical sensitivity analysis for performance assessment of HLW repositories: effects of speciation and matrix diffusion, 10:43892 (R;US)
AMERICIUM 243 TARGET
Fast Fission
Measurement of fast neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am, 10:45671 (RA;JP;In Japanese)
Neutron Reactions
Measurement of fast neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am, 10:45671 (RA;JP;In Japanese)
AMERICIUM OXIDES
Formation Heat
Enthalpy of formation of americium sesquioxide; systematics of actinide sesquioxide thermochemistry, 10:44678 (J;NL)
Thermodynamics
Enthalpy of formation of americium sesquioxide; systematics of actinide sesquioxide thermochemistry, 10:44678 (J;NL)
AMINES

AMMONIA
Breakdown
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Electron Attachment
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Thermodynamic Cycles
Optimization of a supersonic turbine set through an ammoniac cycle, 10:44156 (R;FR;In French)
AMMONIUM COMPOUNDS
See also AMMONIUM SULFATES
QUATERNARY COMPOUNDS
Ecological Concentration
Observations of aerosol chemical composition and acidity in Northwest and Southeast regions of the US, 10:45115 (J;NL)
AMMONIUM SULFATES
Health Hazards
[Effects of sulfur dioxide and respirable particulates on pulmonary function in human subjects], 10:45268 (R;US)
[Effects of sulfur dioxide and respirable particulates on pulmonary function in human subjects]. Progress report, January 1, 1981-December 31, 1981, 10:45267 (R;US)
AMPHIBOLE
Absorption Spectra
^{57}Fe Moessbauer spectra of natural and synthetic hastingsites, and implications for peak assignments in calcic amphiboles, 10:45309 (J;US)
Mineralogy
Fluorine end-member micas and amphiboles, 10:45310 (J;US)
AMPLIFIERS
See also MICROWAVE AMPLIFIERS
SQUID Devices
Nuclear quadrupole resonance detected at 30 MHz with a dc superconducting quantum interference device, 10:44872 (J;US)
ANADROMOUS FISHES
See also SALMON
Abundance
Abundance and distribution of walleye, northern squawfish and smallmouth bass in John Day Reservoir and tailrace. Annual progress report, 1983, 10:45158 (R;US)
Inventories
Biological and physical inventory of Clear Creek, Orofino Creek, and the Potlatch River, tributary streams of the Clearwater River, Idaho. Final report, 10:45159 (R;US)
Population Dynamics
Yakima River Spring Chinook Enhancement Study. Annual report, FY 1984, 10:45189 (R;US)
Sampling
Abundance and distribution of walleye, northern squawfish and smallmouth bass in John Day Reservoir and tailrace. Annual progress report, 1983, 10:45158 (R;US)
ANAEROBIC DIGESTION
Research Programs
SERI biofuels program. Quarterly technical report, second and third quarters, FY 1985, 10:43936 (R;US)
ANALOG SYSTEMS
Signals
Efficient optical analog signal amplification by backward Raman scattering, 10:44857 (R;US)
ANALYSIS (ACTIVATION)
See ACTIVATION ANALYSIS
ANALYSIS (GAS)
See GAS ANALYSIS
ANGIOGRAPHY

Biological Radiation Effects
Basic biological effects of radiation, 10:45242 (RA;IN)
Radiation Injuries
HZE effects on mammalian cells, 10:45220 (R;DE)
ANIMAL FEEDS
Comparative Evaluations
Development of rations for the enhanced survival of salmon. Annual report, 1984, 10:43968 (R;US)
ANISOLE
Radiolysis
Pulse radiolytic study of the application of 1,2,4,5-tetramethoxybenzene as an electron transfer reagent in solar energy conversion systems, 10:44835 (RA;IL)
ANL
Personal Computers
Managing personal desktop computing at Argonne National Laboratory, 10:45908 (R;US)
ANODES
Corrosion
Study of alkali- and sulfur-enhanced corrosion of advanced energy systems. Final report, 10:44510 (R;US)
ANORTHITE
Mineralogy
Join $CaAl_2Si_2O_8$-H_2O (anorthite-water) at elevated pressures and temperatures, 10:45320 (J;US)
ANTARES FACILITY
Alignment
Installation alignment of a multi-beam ICF target illumination system, 10:45852 (R;US)
Optical Systems
Installation alignment of a multi-beam ICF target illumination system, 10:45852 (R;US)
ANTHRACENE
Solubility
Transport and relaxation processes in supercritical fluids. Technical progress report, April 1, 1985-June 30, 1985, 10:43625 (R;US)
ANTHRANILIC ACID
Phosphorescence
Effects of polyacrylic acid on the room-temperature phosphorescence of selected compounds, 10:44815 (J;NL)
ANTIMONY
Deposition
UV laser incorporation of dopants into silicon: Comparison of two processes, 10:44724 (J;US)
Volatility
Behavior of ruthenium, cesium and antimony during simulated HLLW vitrification, 10:43844 (RA;US)
ANTIMONY ALLOYS
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)
ANTIMUONS

BARIUM SULFATES
Pneumatic Transport
Tubular pneumatic conveyor pipeline. Final technical report, 10:44855 (R;US)
BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Heliostats
10 MWe Solar Thermal Central Receiver Pilot Plant mirror module corrosion, torque tube damage, and mirror reflectance survey, July 1984, 10:44022 (R;US)
Mirrors
10 MWe Solar Thermal Central Receiver Pilot Plant mirror module corrosion, torque tube damage, and mirror reflectance survey, July 1984, 10:44022 (R;US)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BASALT
Permeability
Nuclear Technology Programs. Quarterly progress report, October-December 1984, 10:43887 (R;US)
Radionuclide Migration
Contact zones and hydrothermal systems as analogues to repository conditions, 10:43890 (R;US)
BATTERY CHARGERS
Performance Testing
Electric vehicle charger test plan. Revision 1, 10:44574 (R;US)
BCS THEORY
[Topics in theoretical physics]. Progress report, 10:45551 (R;US)
I. Core-quasiparticle coupling model calculations as a test of IBA core descriptions of the even-mass Hg isotopes. II. Decay of mass-separated ^{205}At, 10:45659 (R;US)
BEAM BENDING MAGNETS
Computerized Simulation
TOM: a program for interactive lattice design, 10:44949 (R;US)
Pulse Generators
Pulsed power supplies for the Fermilab 1 TeV switchyard, 10:44973 (R;US)

BEAM BUNCHERS
Ion Beams
Stability of ions in bunched-beam machines, 10:44966 (RA;XC)
BEAM FOCUSING MAGNETS
Superconducting Magnets
Superconducting quadrupoles, 10:44951 (R;US)
BEAM INJECTION HEATING
Ion Sources
Surface generation of negative hydrogen ion beams, 10:45846 (R;NL)
Mathematical Models
Modeling of plasma heating with neutral beam injection in T-11 machine, 10:45822 (TG;US)
BEAM MONITORING
NAC Cyclotron
Beam transport system, 10:44988 (RA;ZA)
BEAM MONITORS
Specifications
Diagnostics, 10:45013 (RA;XC)
BEAM OPTICS
Lectures
CERN accelerator school: Antiprotons for colliding beam facilities. Proceedings, 10:44939 (R;XC)
Introduction to beam optics, 10:44940 (RA;XC)
Meetings
CERN accelerator school: Antiprotons for colliding beam facilities. Proceedings, 10:44939 (R;XC)
BEAM PROFILES
Photography
Accelerator beam diagnostics using a four-view image camera, 10:44945 (RA;US)
BEAM TRANSPORT
Beam-Beam Interactions
Summary from working group on multiple beams and funneling, 10:44955 (R;US)
Lectures
CERN accelerator school: Antiprotons for colliding beam facilities. Proceedings, 10:44939 (R;XC)
Meetings
CERN accelerator school: Antiprotons for colliding beam facilities. Proceedings, 10:44939 (R;XC)
NAC Cyclotron
Beam transport system, 10:44988 (RA;ZA)
Simulation
Model equations for high current transport, 10:44960 (R;US)
BEAM WIDTHS
See BEAM PROFILES
BEAM-BEAM INTERACTIONS
Beam-beam interaction, 10:44943 (RA;XC)
BEAM-PLASMA SYSTEMS
Computerized Simulation
Electromagnetic effects in relativistic electron beam plasma interactions, 10:44961 (R;US)
Electric Discharges
Plasma physics of the beam plasma discharge, 10:45814 (J;GB)
Electromagnetic Radiation
Electromagnetic effects in relativistic electron beam plasma interactions, 10:44961 (R;US)
BEAMS (STRUCTURAL)
See STRUCTURAL BEAMS
BEAVER VALLEY-1 REACTOR
Shippingport, Pennsylvania, USA
Electrical Equipment
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Beaver Valley Nuclear Power Station, Unit 1, 10:44431 (R;US)
Reactor Control Systems
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Beaver Valley Nuclear Power Station, Unit 1, 10:44431 (R;US)
Reactor Instrumentation
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Beaver Valley Nuclear Power Station, Unit 1, 10:44431 (R;US)
Reactor Protection Systems
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Beaver Valley Nuclear Power Station, Unit 1, 10:44431 (R;US)
BENZENE
Raman Spectroscopy
Coherent anti-Stokes Raman scattering in benzene and nitromethane shock-compressed to 10 GPa, 10:44750 (R;US)
Yields
Flash pyrolysis of coal with reactive and non-reactive gases, 10:43616 (R;US)
BENZIDINE
Absorption Spectra
[Charge separation in photoredox reactions]. Informal annual technical progress report, October 1, 1982-August 1, 1983, 10:44799 (R;US)
Photoionization
[Charge separation in photoredox reactions]. Informal annual technical progress report, October 1, 1982-August 1, 1983, 10:44799 (R;US)
BENZOPYRENE
Biochemical Reaction Kinetics
Covalent binding of benzo[a]pyrene diol epoxide to DNA of mouse skin: in vivo persistence of adducts formation, 10:45273 (J;US)
Carcinogen Screening
Studies on the tumor initiating, tumor promoting, and tumor co-initiating properties of respiratory carcinogens, 10:45259 (R;US)
Glucuronide Conjugates
Role of metabolism in benzo(a)pyrene carcinogenesis, 10:45262 (R;US)
Glutathione Conjugates
Role of metabolism in benzo(a)pyrene carcinogenesis, 10:45262 (R;US)
BERYLLIA
See BERYLLIUM OXIDES
BERYLLIUM
Neutron Reactions
Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University, 10:45604 (RA;JP;In Japanese)
Surface Coating
Deposition of selenium coatings on beryllium foils. Revision 1, 10:44646 (R;US)
X Radiation
Deposition of selenium coatings on beryllium foils. Revision 1, 10:44646 (R;US)
BERYLLIUM 9 REACTIONS
Heavy Ion Fusion Reactions
Structure of ^{186}Ir and decoupling phenomena in doubly-odd deformed nuclei, 10:45657 (J;NL)
BERYLLIUM 9 TARGET
Alpha Reactions
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Spallation
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
BERYLLIUM FLUORIDES
Self-Diffusion
Diffusion phenomena of fluorine and cations in molten Li_2BeF_4, $LiBeF_3$ and $NaBeF_3$, 10:44780 (R;JP)
BERYLLIUM MODERATORS
See BERYLLIUM
BERYLLIUM OXIDES
Dielectric Properties
Facility for measuring microwave properties of radiation - damaged ceramics for RF windows and other fusion applications, 10:45836 (RA;US)
Emission Spectra
Model for low-temperature luminescence in lithium- and sodium-doped beryllium oxide single crystals, 10:44672 (J;US)

Physical Radiation Effects
Facility for measuring microwave properties of radiation - damaged ceramics for RF windows and other fusion applications, 10:45836 (RA;US)
Radiation Effects
Hydrogen bombardment of the oxide layer on beryllium, 10:44682 (J;CH)
Thermoluminescence
Model for low-temperature luminescence in lithium- and sodium-doped beryllium oxide single crystals, 10:44672 (J;US)
Visible Spectra
Model for low-temperature luminescence in lithium- and sodium-doped beryllium oxide single crystals, 10:44672 (J;US)

BERYLLIUM SULFATES
Carcinogen Screening
Studies on the tumor initiating, tumor promoting, and tumor co-initiating properties of respiratory carcinogens, 10:45259 (R;US)

BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS

BETA DOSIMETRY
Configuration
Influence of different irradiation facilities on the response of radioprotection devices, 10:45011 (R;FR;In French)

BETA-MINUS DECAY
Strength Functions
Influence of the beta strength function on reactor and neutrino physics, 10:45701 (R;DE;In German)

BGO DETECTORS
Neutron Beams
Collisions of neutrons and of gamma rays in $Bi_4Ge_3O_{12}$ (BGO) and NaI(Tl) scintillation detectors, 10:45006 (R;CA)

BIBLIS REACTOR
See BIBLIS-A REACTOR

BIBLIS-A REACTOR
Pressure Vessels
Identification of the oscillation behavior and system parameter estimation of pressure and core vessel of nuclear power plant BIBLIS-A, 10:44439 (TG;US)

BINARY ALLOY SYSTEMS
Physical Radiation Effects
Phase stability under irradiation (NiSi, NiGe, NiBe, CuBe, MgCd, AlZn, AlAg, PdMo, PdW, WRe, FeSi), 10:44586 (R;FR)

BINARY-FLUID SYSTEMS
Design
Wellhead-sized binary-cycle geothermal power plants. Final report, 10:44134 (R;US)

BIOGAS
See METHANE

BIOGEOCHEMISTRY
Meetings
6th International symposium on environmental biogeochemistry. Final report. Summary, 10:45136 (R;US)

BIOLOGICAL DOSEMETERS
Teeth
Dosimetry by stimulated exoelectronic emission of apatites and dental biomaterials, 10:45015 (R;FR;In French)
Uses
Assessment of radiation dose by biological indicators, 10:45243 (RA;IN)

BIOLOGICAL RADIATION EFFECTS
See also RADIATION INJURIES
Research Programs
Activities in biological radiation research at the AGF, 10:45230 (R;DE;In German)

BIOLOGICAL REACTORS
See BIOREACTORS

BIOMASS
Coordinated Research Programs
Biomass and coal conversion programs of the USAID/GOI Alternative Energy Resources Development Project. Trip report to India, May 22-June 2, 1983, 10:44479 (R;US)
Gasification
Biomass gasification project AVSA, 10:43929 (R;XE;In French)
Biomass gasification research: recent results and future trends, 10:43933 (R;US)
Liquefaction
Direct conversion of biomass to liquids by thermal processes, 10:43935 (R;US)
Techno-economic assessment of direct biomass liquefaction processes. Research report, 10:43931 (R;FI)
Pyrolysis
Direct conversion of biomass to liquids by thermal processes, 10:43935 (R;US)
Research Programs
Biomass gasification research: recent results and future trends, 10:43933 (R;US)
Surveys
Identifying aboveground wood fiber potentials in New York state. Forest Service resource bulletin, 10:44006 (R;US)

BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Economics
Animal faeces can be recycled as useful synthetic oils, 10:43926 (RA;US)

BIOMASS PLANTATIONS
Economic Analysis
Economic evaluation of Short Rotation Intensive Culture energy plantations, 10:43992 (R;US)
Environmental Impacts
Forest service energy program and its potential, 10:43982 (RA;US)
Management
Establishment and management of energy plantations, 10:43986 (RA;US)
Managing natural stands for biomass, 10:43987 (RA;US)
Short Rotation Cultivation
Economic evaluation of Short Rotation Intensive Culture energy plantations, 10:43992 (R;US)

BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Digital Systems
Multiline digital radiographic imager study with synchronization to detector gas ion drift, 10:45016 (R;FR;In French)
Ionization Chambers
Multiline digital radiographic imager study with synchronization to detector gas ion drift, 10:45016 (R;FR;In French)
Radiation Doses
Field study to evaluate radiation doses in dental practices, 10:45202 (R;DE;In German)

BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Waste Heat Utilization
Methane digesters and cogeneration, 10:43922 (RA;US)

BIPHENYLDIAMINE
See BENZIDINE

BISMUTH
Adsorption
Observation of adsorbate-induced surface states by elastic electron tunneling spectroscopy, 10:44916 (J;US)
Ionic Atoms
Ionic 4F-3D X-rays from ^{208}Pb and ^{209}Bi, 10:45361 (RA;DE)

BISMUTH 209 TARGET
Alpha Reactions
Fission-fragment kinetic-energy distributions from a two-dimensional Fokker-Planck equation, 10:45664 (J;NL)
Titanium 48 Reactions
Some problems of fusion and fission of heavy nuclear systems, 10:45674 (RA;SU;In Russian)
Titanium 49 Reactions
Some problems of fusion and fission of heavy nuclear systems, 10:45674 (RA;SU;In Russian)
Titanium 50 Reactions
Some problems of fusion and fission of heavy nuclear systems, 10:45674 (RA;SU;In Russian)

Xenon 136 Reactions
Unified model for dissipative heavy-ion collisions, 10:45684 (RA;DE)
BISMUTH COMPOUNDS
Physical Radiation Effects
Influence of high energetic irradiations with heavy ions on the magnetic properties of ferrimagnetic iron granates, 10:44667 (R;DE;In German)
BISMUTH GERMANATE DETECTORS
See BGO DETECTORS
BITUMINOUS COAL
Devolatilization
On the role of heating rate in rapid coal devolatilization, 10:43638 (BA;US)
Heating
On the role of heating rate in rapid coal devolatilization, 10:43638 (BA;US)
Hydrogenation
Market trend analyses of coal hydrogenation - study, 10:43615 (R;DE;In German)
Mineralogy
Application of scanning electron microscopy and automated image analysis for characterization of mineral matter in coal, 10:43653 (R;US)
Thermodynamic Properties
Reaction calorimetry for coal chemistry and catalysis. Final report, August 1, 1982-July 30, 1985, 10:43652 (R;US)
BLACK COAL
See also BITUMINOUS COAL
Chemical Analysis
Analysis directory of Canadian commercial coals - supplement No. 5, 10:43646 (R;CA)
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLAST FURNACES
Cooling Systems
Water leak detection in the cooling system of the blast furnace walls, by using radiotracer techniques, 10:45162 (RA;BR)
Fuels
Studies on the degradation of cokes in the blast furnace, 10:43645 (TG;GB)
BOGS
See SWAMPS
BOILERS
See also FLUIDIZED BED BOILERS
Combustion Products
Industrial boiler SO_2 cost report, 10:45100 (R;US)
Deposits
Current state of knowledge on fire-side boiler fouling, 10:44922 (TJ;GB)
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Energy Efficiency
Improved boiler control in food factories. Final report, 10:44567 (R;XE)
Feedwater
Feedwater heater procurement guidelines. Final report, 10:44163 (R;US)
Suction effects on feedpump performance: a literature survey (Problems in feedwater system), 10:44164 (R;US)
Fouling
Current state of knowledge on fire-side boiler fouling, 10:44922 (TJ;GB)
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Fuel Feeding Systems
Coal water mixture development. Quarterly technical progress report, 10:43689 (R;US)
Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)
Coal water mixture development. Quarterly technical progress report, 10:43698 (R;US)
Pollution Control Equipment
Industrial boiler SO_2 cost report, 10:45100 (R;US)
Welded Joints
Seminar on dissimilar welds in fossil-fired boilers: proceedings, 10:44161 (R;US)
BOILING DETECTION
Acoustic Monitoring
Prediction methods in parametric signal models for early failure detection, 10:44366 (R;DE;In German)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLTZMANN-VLASOV EQUATION
Supersymmetry
N=4 supersymmetric Liouville equation, 10:45772 (R;SU;In Russian)
BONN SYNCHROTRON
Research Programs
Bonn 500 MeV electron synchrotron: 1958-1984, 10:44964 (R;DE;In German)
BONNEVILLE POWER ADMINISTRATION
Maintenance
Operations and maintenance: a performance review and staffing study, 10:44497 (R;US)
Performance
Operations and maintenance: a performance review and staffing study, 10:44497 (R;US)
Power Transmission
1985 transmission rate schedules and general transmission rate schedule provisions, 10:44499 (R;US)
Rate Structure
1985 transmission rate schedules and general transmission rate schedule provisions, 10:44499 (R;US)
1985 wholesale power rate schedules and general rate schedule provisions, 10:44498 (R;US)
Research Programs
1984 research and development yearbook, 10:44463 (R;US)
BOR-60 REACTOR
Dimitrovgrad, USSR
Primary Coolant Circuits
Corrosion of materials in sodium in BOR-60 reactor core, 10:44264 (RA;XA)
Steam Generators
1 x 2M steel performance in the BOR-60 steam generator, 10:44260 (RA;XA)
1 x 2M steel performance in the BOR-60 steam generator, 10:44265 (RA;XA)
BORIDES
See also CERIUM BORIDES
IRON BORIDES
LANTHANUM BORIDES
NICKEL BORIDES
SAMARIUM BORIDES
TITANIUM BORIDES
Crystallography
Recent developments in the structural crystallography of boron and the higher borides, 10:44771 (R;US)
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)
BORON
Crystallography
Recent developments in the structural crystallography of boron and the higher borides, 10:44771 (R;US)
BORON 10 TARGET
Hadron Reactions
Isotopic and isotonic effect for nucleon production in deep inelastic nuclear reactions, 10:45601 (RA;DE)
BORON 11 TARGET
Hadron Reactions
Isotopic and isotonic effect for nucleon production in deep inelastic nuclear reactions, 10:45601 (RA;DE)
BORON ADDITIONS
Metallurgical Effects
Armor - preliminary study of the effect of several alloying elements and addition agents upon the metallurgical properties of manganese-molybdenum steel used in armor, 10:44579 (R;US)

BORON CARBIDES
Physical Radiation Effects
Radiation damage in boron carbide: swelling and microcracking, 10:44660 (R;FR;In French)
BOROSILICATE GLASS
Dissolution
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Leaching
Influence of the leaching mode on the durability of a glass for fission product containment, 10:44699 (R;FR;In French)
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
BOROSILICATES
See BOROSILICATE GLASS
BOTSWANA
Geochemical Surveys
Surficial uranium deposits in Botswana, 10:43782 (RA;XA)
Uranium Reserves
Surficial uranium deposits in Botswana, 10:43782 (RA;XA)
BPA
See BONNEVILLE POWER ADMINISTRATION
BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
BRAIN
Metabolism
Cerebral haemodynamic and metabolic changes in carotid artery occlusion: a PET study, 10:45200 (R;FR)
Positron Computed Tomography
Cerebral haemodynamic and metabolic changes in carotid artery occlusion: a PET study, 10:45200 (R;FR)
BREAKWATERS
See DAMS
BREEDER REACTORS
See also FBR TYPE REACTORS
Fluid Flow
Preliminary study of the thermo-hydraulic behaviour of the binary breeder reactor, 10:44258 (R;BR;In Portuguese)
Heat Transfer
Preliminary study of the thermo-hydraulic behaviour of the binary breeder reactor, 10:44258 (R;BR;In Portuguese)
Reactor Lattice Parameters
Preliminary study of the thermo-hydraulic behaviour of the binary breeder reactor, 10:44258 (R;BR;In Portuguese)
BREEDING BLANKETS
Breeding Ratio
Special topics reports for the reference tandem mirror fusion breeder. Volume 5. Neutronic issues and optimization, 10:45858 (R;US)
Fuel Element Clusters
Conceptual design basis and temperature predictions in a simulated instrumented LMFBR blanket subassembly, 10:44256 (R;US)
Heat Transfer
Conceptual design basis and temperature predictions in a simulated instrumented LMFBR blanket subassembly, 10:44256 (R;US)
TRIO experiment, 10:45833 (RA;US)
Hydraulics
Conceptual design basis and temperature predictions in a simulated instrumented LMFBR blanket subassembly, 10:44256 (R;US)
Materials Testing
FUBR-1A experimental results, 10:45834 (RA;US)
Thermonuclear Reactor Materials
Property studies of solid tritium breeding materials, 10:45832 (RA;US)
Tritium Recovery
TRIO experiment, 10:45833 (RA;US)
BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION
BRILLOUIN EFFECT
Simulation
Harmonic generation of ion waves due to Brillouin backscattering, 10:45412 (R;US)
BRILLOUIN SCATTERING
See BRILLOUIN EFFECT
BRINES
Chemical Analysis
Chemical analyses of geothermal waters and Strategic Petroleum Reserve brines for metals of economic importance, 10:44137 (J;US)
BROMINE 81 TARGET
Neutron Reactions
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)
BRONCHOGENIC CARCINOMA
See CARCINOMAS
BROOKHAVEN AGS
Polarized Beams
Constructing and testing a demonstration Siberian Snake, 10:44937 (R;US)
Summary of the working group on the construction and demonstration of a Siberian Snake, 10:44938 (R;US)
BROOKHAVEN INTERSECTING STORAGE ACCELERAT
See ISABELLE STORAGE RINGS
BROWN COAL
Chemical Analysis
Analysis directory of Canadian commercial coals - supplement No. 5, 10:43646 (R;CA)
Thermodynamic Properties
Reaction calorimetry for coal chemistry and catalysis. Final report, August 1, 1982-July 30, 1985, 10:43652 (R;US)
BROWNS FERRY-1 REACTOR
Decatur, Alabama, USA
Blackouts
Station Blackout at Browns Ferry Unit One - accident sequence analysis. Volume 1, 10:44406 (R;US)
Fuel Management
Improved fuel management strategies for TVA's nuclear reactors, 10:44188 (RA;US)
Power Supplies
Station Blackout at Browns Ferry Unit One - accident sequence analysis. Volume 1, 10:44406 (R;US)
BROWNS FERRY-2 REACTOR
Decatur, Alabama, USA
Fuel Management
Improved fuel management strategies for TVA's nuclear reactors, 10:44188 (RA;US)
BROWNS FERRY-3 REACTOR
Decatur, Alabama, USA
Fuel Management
Improved fuel management strategies for TVA's nuclear reactors, 10:44188 (RA;US)
BRUCE-2 REACTOR
Tiverton, Ontario, Canada
Cracks
Estimating the number of latent cracks in pressure tube joints at Bruce unit 2, 10:44250 (R;CA)
Pressure Tubes
Estimating the number of latent cracks in pressure tube joints at Bruce unit 2, 10:44250 (R;CA)
BSF REACTOR
See BSR-1 REACTOR
BSR-1 REACTOR
Reactor Operation
Bulk Shielding Facility quarterly report, October, November and December 1984, 10:44331 (R;US)
BSR-2 REACTOR
Reactor Operation
Bulk Shielding Facility quarterly report, October, November and December 1984, 10:44331 (R;US)
BUILDING MATERIALS
Mechanical Properties
Specialist meeting on mechanical properties of structural materials including environmental effects, Chester, England, 10-14 October 1983, 10:44633 (R;AT)
Weathering
Catalog of Corps of Engineers structure inventories suitable for the acid precipitation-structure materials study. Special report, 10:44697 (R;US)

Containment Buildings
Effect of transverse venting on flame acceleration and transition to detonation in a large channel, 10:44428 (R;US)
Integrity of containment penetrations under severe accident conditions. FY84 annual report, 10:44412 (R;US)

Containment Systems
Application of the coupled fluid-structure code PELE-IC to pressure-suppression analysis: annual report to NRC for 1979, 10:44374 (R;US)

Control Elements
Performance experience of ASEA-ATOM BWR control blades, 10:44201 (RA;US)

Control Rooms
Human engineering guidelines for the evaluation and assessment of Video Display Units, 10:44312 (R;US)

Fuel Assemblies
Comparison of advanced BWR fuel designs to current standard designs, 10:44209 (RA;US)
Design and operational behavior of SVEA water cross BWR fuel, 10:44206 (RA;US)
Development of BWR 9 x 9 fuel assemblies and general trends in advanced design of LWR reload fuel, 10:44205 (RA;US)
Extended Burnup Demonstration Reactor Fuels Program. Annual progress report, April 1983-March 1984, 10:44187 (R;US)
Performance experience of the ASEA-ATOM BWR fuel, 10:44194 (RA;US)
Performance of Exxon Nuclear Company fuel in light water reactors, 10:44198 (RA;US)
Review of the relation of coolant chemistry to crud deposition on light water reactor fuel, 10:44193 (RA;US)

Fuel Cans
Corrosion and hydriding of Zircaloy fuel rod cladding in 633K water and reactor environments, 10:44189 (RA;US)
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
In-reactor corrosion and crud deposition data on Fragema fuel, 10:44190 (RA;US)
Nuclear fuel cladding localized corrosion, 10:44191 (RA;US)
Relation between autoclave tests and in-reactor corrosion measurement results for Zircaloy, 10:44192 (RA;US)

Fuel Element Clusters
Simulation of a BWR fuel bundle under small break conditions, 10:44340 (R;US)

Fuel Management
Development of BWR 9 x 9 fuel assemblies and general trends in advanced design of LWR reload fuel, 10:44205 (RA;US)

Fuel Rods
BWR fuel performance and its development in Japan, 10:44196 (RA;US)
Fission product release from BWR fuel under LOCA conditions, 10:44388 (R;US)
Fuel performance evaluation and improved fuel utilization by pool-site fuel services, 10:44197 (RA;US)
International super-ramp project at Studsvik, 10:44203 (RA;US)
Multiple ramp tests of zirconium liner fuel, 10:44208 (RA;US)
Quad Cities extended burnup fuel performance, 10:44199 (RA;US)
Ramp tests on fuel rods containing solid pellet, annular pellet, and Sphere-Pac particle fuel, 10:44204 (RA;US)
Trends in BWR fuel performance, 10:44195 (RA;US)

Fuel-Cladding Interactions
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
International super-ramp project at Studsvik, 10:44203 (RA;US)
Overview of the joint development work on PCI remedy fuel, 10:44202 (RA;US)

Inspection
Methodology for prioritization of systems and inspection programs, 10:44350 (RA;US)

Loss of Coolant
Application of the coupled fluid-structure code PELE-IC to pressure-suppression analysis: annual report to NRC for 1979, 10:44374 (R;US)
Characteristics of the dynamic loading in a full scale multivent BWR pressure suppression system, 10:44435 (R;US)
Core spray heat transfer model for RELAP4/MOD7, 10:44342 (R;US)
Fission product release from BWR fuel under LOCA conditions, 10:44388 (R;US)
Simulation of a BWR fuel bundle under small break conditions, 10:44340 (R;US)
Transient testing of an in-core impedance flow sensor in a 9-rod heated bundle, 10:44394 (R;US)
Water Reactor Safety Research Division. Quarterly progress report, July 1-September 30, 1980, 10:44389 (R;US)

Low Pressure Coolant Injection
Experiences from the Nordic Benchmark analyses, 10:44353 (RA;US)

Meltdown
Experimental investigation of hydrodynamic fragmentation of gallium droplets in water flow, 10:44356 (R;DE;In German)

Molten Metal-Water Reactions
Experimental investigation of hydrodynamic fragmentation of gallium droplets in water flow, 10:44356 (R;DE;In German)

Plutonium 241
Neutron total cross section of ^{240}Pu below 6 eV and the parameters of the 1.0-eV resonance, 10:44182 (R;US)

Pressure Suppression
Application of the coupled fluid-structure code PELE-IC to pressure-suppression analysis: annual report to NRC for 1979, 10:44374 (R;US)
Characteristics of the dynamic loading in a full scale multivent BWR pressure suppression system, 10:44435 (R;US)

Pressure Vessels
Flaw preparations for HSST program vessel fracture mechanics testing: mechanical-cyclic pumping and electron-beam weld-hydrogen-charge cracking schemes, 10:44375 (R;US)
Fracture properties of a neutron-irradiated stainless steel submerged arc weld cladding overlay, 10:44186 (R;US)
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)

Primary Coolant Circuits
Review of the relation of coolant chemistry to crud deposition on light water reactor fuel, 10:44193 (RA;US)

Radioactive Effluents
Radioactive materials released from nuclear power plants, 10:44319 (R;US)

Reactor Accidents
Effect of transverse venting on flame acceleration and transition to detonation in a large channel, 10:44428 (R;US)
Licensee Event Report (LER) compilation, June 1985. Volume 4, No. 6, 10:44400 (R;US)

Reactor Decommissioning
Technology, safety and costs of decommissioning a Reference Boiling Water Reactor Power Station. Main report. Volume 1, 10:44368 (R;US)

Reactor Materials
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Phenomenological model for stress corrosion cracking of Types 316NG and 316 stainless steel, 10:44184 (R;US)

Reactor Operation
Licensee Event Report (LER) compilation, June 1985. Volume 4, No. 6, 10:44400 (R;US)

Reactor Operators
Psychological scaling of expert estimates of human error probabilities: application to nuclear power plant operation, 10:44429 (R;US)

Reactor Safety
Water Reactor Safety Research Division. Quarterly progress report, July 1-September 30, 1980, 10:44389 (R;US)

Risk Assessment
Determination of several LWR realistic success criteria for probabilistic risk assessment. Final report, 10:44346 (R;US)

Experiences from the Nordic Benchmark analyses, 10:44353 (RA;US)
Large-scale reliability analysis by decomposition and integration, 10:44351 (RA;US)
Methodology for prioritization of systems and inspection programs, 10:44350 (RA;US)
Rod Bundles
Core spray heat transfer model for RELAP4/MOD7, 10:44342 (R;US)
Service Life
Longevity of nuclear power systems. Final report, 10:44211 (R;US)

Crystallization
Comments on "Methods for the determination of the activation energy of glass crystallization from thermal analysis", 10:44656 (J;GB)
CADMIUM COMPLEXES
Radiolysis
Study of lead and cadmium cryptate reduction by pulsed radiolysis, 10:44832 (R;FR;In French)
CADMIUM SELENIDES
Crystal Growth
Low temperature synthesis of pseudobinary chalcogenides, 10:44711 (RA;IL)
CADMIUM SULFIDES
Absorptivity
Size quantization in small semiconductor particles, 10:44728 (J;US)
Catalytic Effects
Vectorial electron transfer on designed surfaces. Annual report, January 1984-January 1985, 10:44827 (R;US)
Deposition
Development of stable high efficiency polycrystalline thin-film solar cells based on $CuInSe_2$. Final report, 16 March 1983-15 March 1984, 10:44012 (R;US)
Spray pyrolysis processing and properties of thin film photovoltaic materials, 10:43996 (R;US)
Pyrolysis
Spray pyrolysis processing and properties of thin film photovoltaic materials, 10:43996 (R;US)
CADMIUM TELLURIDES
Crystal Growth
Effect of partial pressures on mass transport of CdTe by VUVG, 10:44710 (RA;IL)
Low temperature synthesis of pseudobinary chalcogenides, 10:44711 (RA;IL)
Deposition
Development of stable high efficiency polycrystalline thin-film solar cells based on $CuInSe_2$. Final report, 16 March 1983-15 March 1984, 10:44012 (R;US)
Mass Transfer
Effect of partial pressures on mass transport of CdTe by VUVG, 10:44710 (RA;IL)
CALCIUM
Phase Diagrams
Study of the phase diagram of the calcium chloride/calcium system by DTA, 10:44795 (TJ;US)
CALCIUM 48 TARGET
Helium 3 Reactions
Δ resonance excitation in nuclei by (^{3}He,t) reactions, 10:45700 (RA;DE)
Uranium 238 Reactions
Dynamics of the mass asymmetry, 10:45685 (RA;DE)
CALCIUM CHLORIDES
Phase Diagrams
Study of the phase diagram of the calcium chloride/calcium system by DTA, 10:44795 (TJ;US)
CALCIUM IONS
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1984-March 15, 1985, 10:45350 (R;US)
Ion-Molecule Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1984-March 15, 1985, 10:45350 (R;US)
CALCIUM ISOTOPES
Nuclear Radii
Nuclear sizes and densities of 1 fsub(7/2)-nuclei from pionic atoms and elastic scattering of α particles, 10:45695 (RA;DE)
CALHOUN-1 REACTOR
Radioactive Effluents
Technical evaluation of RETS-required reports for Fort Calhoun Station Unit 1, 10:44314 (R;US)
CALIBRATION
Least Square Fit
Determination of calibration equations by means of the generalized least squares method, 10:45911 (R;NL)
CALIFORNIA
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
Environmental Policy
How CEQA has streamlined the NEPA process for the DOE Geothermal Loan Guaranty Program, 10:44131 (R;US)
Photovoltaic Power Plants
Budget overruns threaten first solar 100 MWe photovoltaic project, 10:44018 (J;GB)
CALIFORNIUM 252
Uses
Therapeutic dosimetry for Cf-252 neutron brachytherapy of pelvic cancer, 10:45252 (J;US)
CALORIMETERS
Design
Calorimeter for measuring 1-15 kJ laser pulses. Final report, 10:44879 (R;US)
CALORIMETERS (PARTICLE)

Alpha Reactions
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
Carbon 12 Reactions
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
Cathode Sputtering
Properties of amorphous carbon thin films deposited by magnetron pulverization. Application to selective surface for in-vacuum absorbers, 10:44090 (R;FR;In French)
Gasification
Studies of metal/carbon surface chemistry. Reporting period: March 1, 1985-May 31, 1985, 10:43628 (R;US)
Helium 3 Reactions
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
Lithium 6 Reactions
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
Meetings
Carbon 84, 10:44713 (R;DE)
Muonic Atoms
Precision measurement of the 2P-1S transition wave length in muonic ^{13}C, 10:45363 (RA;DE)
Phase Studies
Use of electrical conductivity experiments to study the phase diagram of carbon, 10:44717 (R;US)
Pion Minus Reactions
Two particle correlations in pion-nucleus interactions at 40 GeV/c, 10:45505 (RA;PL)
Pionic Atoms
Precision measurements of 3D-2P pionic X-rays in low-Z atoms, 10:45362 (RA;DE)
Sliding Friction
Carbon materials for sliding ring seals, 10:44714 (RA;DE)

Spallation
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)

CARBON 12
Electron Reactions
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)

CARBON 12 REACTIONS
Compound-Nucleus Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Contributions to the study of nuclear reactions mechanism induced by heavy ions on intermediate mass nuclei, 10:45625 (R;RO;In Romanian)
Heavy Ion Fusion Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Inclusive Interactions
Subthreshold pion production in nucleus-nucleus collisions what is the mechanism, 10:45682 (R;DE)
Incomplete Fusion Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Intermediate Resonance
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
Particle Production
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
Precompound-Nucleus Emission
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data, 10:45618 (R;SU;In Russian)
Resonance Scattering
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
Spallation
Analysis of correlation effects in multinucleon CC interactions at 4.2 GeV/c per nucleon in terms of collective variables, 10:45606 (R;SU)
Total disintegration of lead nuclei by ^{12}C nuclei at 4.5 A GeV/c momentum, 10:45662 (R;SU;In Russian)

CARBON 12 TARGET
Carbon 12 Reactions
Analysis of correlation effects in multinucleon CC interactions at 4.2 GeV/c per nucleon in terms of collective variables, 10:45606 (R;SU)
Role of collision terms for nucleon emission in intermediate energy heavy ion reactions, 10:45597 (R;FR)
Subthreshold pion production in nucleus-nucleus collisions what is the mechanism, 10:45682 (R;DE)
Helium 3 Reactions
Δ resonance excitation in nuclei by (^{3}He,t) reactions, 10:45700 (RA;DE)
Comparative study of (^{3}He,π^-) and (^{3}He,π^+) exclusive reactions on ^{7}Li and ^{12}C, 10:45602 (R;FR)
Oxygen 16 Reactions
High-spin states in ^{24}Mg, 10:45615 (J;GB)

CARBON 13
E1-Transitions
Analysis of form factors of electric transitions in light nuclei with the use of electromagnetic current continuity equation, 10:45608 (R;SU;In Russian)
E2-Transitions
Analysis of form factors of electric transitions in light nuclei with the use of electromagnetic current continuity equation, 10:45608 (R;SU;In Russian)
Nuclear Radii
Precision measurement of the 2P-1S transition wave length in muonic ^{13}C, 10:45363 (RA;DE)

CARBON 14
Radioactive Waste Management
Development of technologies for the waste management of I-129, Kr-85, C-14 and tritium in the Fed. Rep. of Germany, 10:43842 (RA;US)
Status of R and D in the field of nuclear airborne waste sponsored by the European Community, 10:43841 (RA;US)
Spatial Distribution
Significance of the distribution of bomb-produced radiocarbon in the ocean, 10:45167 (R;US)

CARBON CYCLE
Mathematical Models
Significance of the distribution of bomb-produced radiocarbon in the ocean, 10:45167 (R;US)

CARBON DIOXIDE
Absorption
Process for the removal of CO_2 and possibly H_2S from natural gases, 10:43749 (TG;GB)
Biological Effects
Estimating the direct effect of CO_2 on soybean yield, 10:45213 (J;US)
Emission
Uncertainty in carbon emissions, 1975-2075, 10:45087 (R;US)
Forecasting
Uncertainty in carbon emissions, 1975-2075, 10:45087 (R;US)
Reduction
Photodissociation of water molecule. Photoreduction of carbon dioxide molecule, 10:44825 (R;FR;In French)
Solvent Properties
Transport and relaxation processes in supercritical fluids. Technical progress report, April 1, 1985-June 30, 1985, 10:43625 (R;US)

CARBON DIOXIDE LASERS
Resonators
Coupling efficiency of waveguide laser resonators formed by flat mirrors: analysis and experiment, 10:44886 (J;US)

CARBON MONOXIDE
Chemical Reaction Yield
Development of a low NO/sub x/ burner for enhanced oil recovery, 10:43746 (R;US)
Chemical Reactions
Chemistry and mechanism of molten-salt catalysts in coal-gasification processes. Final report, January 1984-January 1985, 10:43633 (R;US)
Hydrogenation
Coal liquefaction via low temperature, low pressure water-gas shift solvent hydrogenation, 10:43636 (R;US)
Shock Waves
Condensed matter at high shock pressures, 10:45401 (R;US)

CARBON STEELS
See also STEEL-ASTM-A533-B
Pitting Corrosion
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Stress Corrosion
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)

CARBON SULFIDES
Absorption Spectra
Spectroscopic studies of carbon disulfide at high pressure, 10:44806 (R;US)
Infrared Spectra
Spectroscopic studies of carbon disulfide at high pressure, 10:44806 (R;US)

CARBON TETRAFLUORIDE
Photochemistry
Radiation chemistry of hydrocarbon and alkyl halide systems. Interim progress report, June 1, 1984-July 31, 1985, 10:44834 (R;US)
CARBONATES

Electric Conductivity
Properties of ethylene carbonate and its use in electrochemical applications: a literature review, 10:44807 (R;US)
Electronic Structure
Properties of ethylene carbonate and its use in electrochemical applications: a literature review, 10:44807 (R;US)
Molecular Structure
Properties of ethylene carbonate and its use in electrochemical applications: a literature review, 10:44807 (R;US)
Solvent Properties
Properties of ethylene carbonate and its use in electrochemical applications: a literature review, 10:44807 (R;US)
CARBONYL RADICALS
Energy Levels
Investigation of several low-lying levels of X doublet pi state of NCO using argon laser excited fluorescence. Final technical report, 10:44822 (R;US)
CARBOXYLIC ACIDS
Chemical Preparation
Organotellurium compounds of biological interest - unique properties of the N-Chlorosuccinimide oxidation product of 9-telluraheptadecanoic acid, 10:44819 (J;US)
Uptake
Organotellurium compounds of biological interest - unique properties of the N-Chlorosuccinimide oxidation product of 9-telluraheptadecanoic acid, 10:44819 (J;US)
CARCINOGENESIS
Correlations
Electron reactions in model and biological systems, 10:45261 (R;US)
CARCINOGENS
Detection
Luminoscope II circuit drawing (Engineering Materials), 10:44914 (E;US)
Electron Transfer
Electron reactions in model and biological systems, 10:45261 (R;US)
CARCINOMAS
Chemotherapy
Synthesis and antitumor activity of 2-β-D-ribofuranosylselenazole-4-carboxamide and related derivatives, 10:44792 (J;US)
CARIBOU
See DEER
CARNOTITE
Solubility
Calculation of the carnotite solubility index, 10:43799 (RA;XA)
CASINGS
See COVERINGS
CASKS
See also SPENT FUEL CASKS
Draft Transportaion Business Plan, 10:43820 (R;US)
Failures
Effect on localized waste-container failure on radionuclide transport from an underground nuclear waste vault, 10:43824 (R;CA)
Fractures
Effect on localized waste-container failure on radionuclide transport from an underground nuclear waste vault, 10:43824 (R;CA)
CASTE (INSECTS)
See INSECTS
POPULATIONS
CASTLE PROJECT
Nuclear Explosions
Report of Project 1-M-54 on thirty service men exposed to residual radiation at Operation castle, 10:45065 (R;US)
CATALYSIS
Chemical Reaction Kinetics
Investigation of muon catalyzed dd- and dt-fusion processes, 10:45845 (RA;DE)
Muon-catalyzed fusion with high-density d-t gas mixtures, 10:45843 (RA;DE)
Recent calculations of muon-catalyzed d-t fusion, 10:45380 (RA;DE)
CATALYSTS
Activation Energy
Silica-supported iron nitride in Fischer-Tropsch reactions. II. Comparison of the promotion effects of potassium and nitrogen on activity and selectivity, 10:43939 (J;US)
Aging
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Chemical Preparation
Chemical raw materials from coal; development of a process for the production of higher oxygen-containing compounds from methanol - laboratory stage, 10:43942 (R;DE;In German)
Comparative Evaluations
New technology concept for two-stage liquefaction of coal, 10:43626 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Deactivation
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Electron Spectroscopy
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Microstructure
Nickel oxide morphology in nickel-silica catalysts, 10:44575 (R;US)
Performance Testing
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Promoters
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Regeneration
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Seed regeneration processes for coal fired MHD power plants, 10:44509 (R;US)
Scanning Electron Microscopy
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Surface Area
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Surface Properties
Studies of metal/carbon surface chemistry. Reporting period: March 1, 1985-May 31, 1985, 10:43628 (R;US)
Temperature Effects
Moessbauer spectroscopy observations of local temperature rises in a silica-supported iron catalyst, 10:43937 (J;US)

Temperature Gradients
Moessbauer spectroscopy observations of local temperature rises in a silica-supported iron catalyst, 10:43937 (J;US)

CATALYTIC COMBUSTORS
Control Systems
Critical component technologies for stationary gas turbine catalytic combustors. Final report, 10:43702 (R;US)
Design
Critical component technologies for stationary gas turbine catalytic combustors. Final report, 10:43702 (R;US)
Fuel Injection Systems
Critical component technologies for stationary gas turbine catalytic combustors. Final report, 10:43702 (R;US)
Performance Testing
Critical component technologies for stationary gas turbine catalytic combustors. Final report, 10:43702 (R;US)
Thermal Efficiency
Critical component technologies for stationary gas turbine catalytic combustors. Final report, 10:43702 (R;US)

CATHODES
Lifetime
Large-area lanthanum hexaboride electron emitter, 10:44674 (J;US)

CATS
Population Dynamics
Movements and dispersal of bobcats in East Tennessee, 10:45135 (J;US)

CATTAILS
Biomass Plantations
AQUAHOL: a developmental project. Technical progress report, November 1980-July 1981, 10:43995 (R;US)
Plant Growth
AQUAHOL: a developmental project. Technical progress report, November 1980-July 1981, 10:43995 (R;US)

CAUSTIC FLOODING
Bench-Scale Experiments
Mechanism of oil bank formation, coalescence in porous media and emulsion stability. Final report, 10:43717 (R;US)

CAVITATION
Mathematical Models
Analytical description of high temperature tensile creep for cavitating materials subjected to time variable loads, 10:44627 (RA;XA)

CAVITIES
See also ROCK CAVERNS
Pore Pressure
Pore fluid migration model for stress cage decay, 10:45057 (R;US)
Roofs
Postburn roof stability analysis for the TONO CRIP UCG burn, 10:43637 (R;US)

CAVITY RECEIVERS
Forced Convection
Numerical simulation of buoyant turbulent flow. Final report, 10:44021 (R;US)
Natural Convection
Numerical simulation of buoyant turbulent flow. Final report, 10:44021 (R;US)
Particles
Optical properties of solid particle receiver materials. I. Angular scattering and extinction characteristics of Norton Masterbeads, 10:44095 (R;US)

CBA (BROOKHAVEN COLLIDING BEAM ACCELERATO
See ISABELLE STORAGE RINGS

CELL CULTURES
Hyperthermia
Modification of thermal sensitivity of Chinese hamster cells by exposure to solutions of monovalent and divalent cationic salts, 10:45256 (R;CA)
Sensitivity
Modification of thermal sensitivity of Chinese hamster cells by exposure to solutions of monovalent and divalent cationic salts, 10:45256 (R;CA)

CELL DIVISION
Biological Repair
Promotion of septation in irradiated Escherichia coli by a cytoplasmic membrane preparation, 10:45251 (J;US)

CELL FLOW SYSTEMS
Uses
Determination of somatic mutations in human erythrocytes by cytometry, 10:45250 (R;US)

CELL GROWTH (ANIMAL)
See ANIMAL CELLS

CELL MEMBRANES
Biophysics
Formation of microvilli, 10:45196 (R;US)
Mathematical Models
Formation of microvilli, 10:45196 (R;US)

CELLS (ANIMAL)
See ANIMAL CELLS

CELLULOSE
Acid Hydrolysis
Evaluation of concentrated halogen acid hydrolysis processes for alcohol fuel production, 10:43946 (R;US)
Pelletizing
Potential for disposal of plant waste agglomerates in spreader stoker boilers, 10:43949 (RA;US)
Thermochemical Processes
Development of a process to produce chemicals from lignocellulose. Final report, 10:43944 (R;US)

CELLULOSE ESTERS
Physical Radiation Effects
Spatial distribution of defects created along the trajectory of an ion in cellulose triacetate, 10:44707 (R;FR;In French)

CENTRAL RECEIVERS
Design
Analysis and design of the Volumetric Air Heating Receiver, 10:44020 (R;US)
Measuring Instruments
Optical properties of solid particle receiver materials. II. Diffuse reflectance of Norton Masterbeads at elevated temperatures, 10:44096 (R;US)
Particles
Optical properties of solid particle receiver materials. II. Diffuse reflectance of Norton Masterbeads at elevated temperatures, 10:44096 (R;US)
Performance Testing
Analysis and design of the Volumetric Air Heating Receiver, 10:44020 (R;US)

CENTRAL REGION
See FEDERAL REGION III

CENTRIFUGE ENRICHMENT PLANTS
Feasibility Studies
Isotope enrichment in zirconium with a plasma centrifuge. Final report on contract CR31-3946, 10:43913 (R;CA)
IAEA Safeguards
Application of the limited frequency-unannounced access strategy measurement technology in gas centrifuge enrichment plants, 10:43902 (R;US)
Inspection
Application of the limited frequency-unannounced access strategy measurement technology in gas centrifuge enrichment plants, 10:43902 (R;US)
Nuclear Materials Management
Application of the limited frequency-unannounced access strategy measurement technology in gas centrifuge enrichment plants, 10:43902 (R;US)

CERAMICS
Ion Implantation
Preparation of backthinned ceramic specimens, 10:44739 (R;US)
Sample Preparation
Preparation of backthinned ceramic specimens, 10:44739 (R;US)
Surface Treatments
Analytical electron microscopy of surface modified ceramics, 10:44664 (R;US)

CERIUM
Solubility
Behavior and mechanism of sorption of uranylperoxocarbonato-complexes on anion exchanger systems, 10:44845 (R;DE;In German)

CERIUM 132
Beta Decay
Excited states of the odd-odd ^{132}La nucleus, 10:45640 (R;SU;In Russian)
CERIUM 133
Beta Decay
Investigation of the ^{133}Ce internal conversion electron spectrum, 10:45638 (R;SU;In Russian)
L Conversion
Investigation of the ^{133}Ce internal conversion electron spectrum, 10:45638 (R;SU;In Russian)
CERIUM 134
Electron Capture Decay
Internal conversion electrons in the ^{134}Ce decay and ^{134}La levels, 10:45639 (R;SU;In Russian)
CERIUM 144
Uptake
Experimental study of the time dependence of uptake from soil of ^{137}Cs, ^{106}Ru, ^{144}Ce and ^{99}Tc into green vegetables, wheat and potatoes, 10:45142 (R;GB)
CERIUM ALLOYS
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)
CERIUM BORIDES
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)
CERIUM IONS
Spin-Lattice Relaxation
Paramagnetic impurity effects in nuclear magnetic resonance determinations of hydrogen diffusion and electronic structure in metal hydrides: cerium in YH_3, 10:44681 (J;CH)
CERIUM OXIDES
Phase Stability
Stability in air and reducing atmospheres of ceria-gadolinia solid solutions prepared by coprecipitation, 10:44670 (R;DK)
CERN
Economics
Economic utility resulting from CERN contracts (second study), 10:44467 (R;XC)
Program Management
Experiments at CERN in 1984, 10:45442 (R;XC)
CERN AG SYNCHROTRON
See CERN PS SYNCHROTRON
CERN II SYNCHROTRON
See CERN SPS SYNCHROTRON
CERN ISR
CERN Intersecting Storage Rings.
Antiproton Beams
Antiprotons in the CERN intersecting storage rings, 10:45000 (RA;XC)
Reviews
Review of accelerator and particle physics at the CERN intersecting storage rings, 10:44929 (R;XC)
CERN PS SYNCHROTRON
Control Systems
System software of the CERN proton synchrotron control system, 10:44971 (R;XC)
CERN SPS SYNCHROTRON
Lectures
SPS p anti p collider, 10:44965 (RA;XC)
Muon Beams
Absolute calibration of the solid state detectors in the narrow band neutrino beam at CERN, 10:45023 (R;NL)
Semiconductor Detectors
Absolute calibration of the solid state detectors in the narrow band neutrino beam at CERN, 10:45023 (R;NL)
Specifications
SPS p anti p collider, 10:44965 (RA;XC)
Stochastic Cooling
Feasibility study of stochastic cooling of bunches in the SPS, 10:44970 (RA;XC)
CESIUM
Fission Yield
Modeling cesium behavior in nuclear reactor fuels at high temperatures, 10:44286 (J;NL)
Materials Handling
Device for handling cesium safely, 10:44874 (J;US)
Volatility
Behavior of ruthenium, cesium and antimony during simulated HLLW vitrification, 10:43844 (RA;US)
Modeling cesium behavior in nuclear reactor fuels at high temperatures, 10:44286 (J;NL)
CESIUM 137
Dosimetry
Concept and derivation of Emergency Reference Levels (ERLs), 10:45249 (RA;IN)
Uptake
Experimental study of the time dependence of uptake from soil of ^{137}Cs, ^{106}Ru, ^{144}Ce and ^{99}Tc into green vegetables, wheat and potatoes, 10:45142 (R;GB)
Uses
Fission product cesium-137 as a source for irradiators, 10:43919 (R;US)
CESIUM CHLORIDES
Deuteration
Deuteration effects in the multiphonon relaxation of crystals, 10:44776 (RA;IL)
Relaxation
Deuteration effects in the multiphonon relaxation of crystals, 10:44776 (RA;IL)
CESIUM IONS
Beam Emittance
MBE-4, a heavy ion multiple-beam experiment, 10:44933 (R;US)
Beam Production
Alumino-silicate ion sources for accelerator applications, 10:44978 (R;US)
Focusing
LBL neutralized beam focusing experiment, 10:45855 (R;US)
Ion Beams
MBE-4, a heavy ion multiple-beam experiment, 10:44933 (R;US)
CHALCOGENIDES
See also SELENIDES
Absorption Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH$_2$)/sub n/CR'(COOC$_2$H$_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH$_2$)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Chemical Preparation
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH$_2$)/sub n/CR'(COOC$_2$H$_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH$_2$)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Mass Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH$_2$)/sub n/CR'(COOC$_2$H$_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH$_2$)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
CHARCOAL
Gasification
Charcoal gasification, 10:43921 (RA;US)
CHARGED PARTICLES
In addition to the specific charged particles listed below, see also the list under ELEMENTARY PARTICLES.
See also DEUTERONS
IONS
Acceleration
Theory of RF acceleration and RF noise, 10:44942 (RA;XC)
CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS
CHARGED PARTICLES
CHARM PARTICLES

Particle Production
[Studies of interactions between elementary particles and nuclei]. Progress report, 10:45420 (R;US)

CHARMONIUM
Coupling
Coupling charmonium to the charmed-meson sector, 10:45521 (J;US)
Particle Production
[Studies of interactions between elementary particles and nuclei]. Progress report, 10:45420 (R;US)
CHEMICAL EFFLUENTS
Chemical Composition
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
Environmental Effects
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
Monitoring
EPA enforcement and new source surface mining requirements and application in West Virginia, USA, 10:43662 (RA;US)
Mutagen Screening
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
Pollution Control
EPA enforcement and new source surface mining requirements and application in West Virginia, USA, 10:43662 (RA;US)
CHEMICAL EXPLOSIONS
Target vulnerability to air defense weapons. Master's thesis, 10:45052 (R;US)
CHEMICAL EXPLOSIVES
See also NITROMETHANE
PETN
TNT
Chemical Reaction Kinetics
Guidelines for a thermochemical kinetics computer program, 10:45053 (R;US)
Combustion Products
Theoretical equations of state for the detonation products of explosives (RX-23-AA, RX-23-AB, RX-23-AC, HNB, NG, PETN, HMX, RDX, BTF, NM, TNT, HNS, NQ, TATB), 10:45059 (R;US)
Containment Systems
Component Test Facility, 10:45054 (R;US)
Decomposition
Guidelines for a thermochemical kinetics computer program, 10:45053 (R;US)
Detonations
Spectroscopic studies of detonating heterogeneous explosives (HNS), 10:45055 (R;US)
Theoretical equations of state for the detonation products of explosives (RX-23-AA, RX-23-AB, RX-23-AC, HNB, NG, PETN, HMX, RDX, BTF, NM, TNT, HNS, NQ, TATB), 10:45059 (R;US)
Granular Materials
Modeling and computation of deflagration-to-detonation transition in reactive granular materials, 10:45056 (R;US)
Test Facilities
Component Test Facility, 10:45054 (R;US)
CHEMICAL HEAT PUMPS
Chemical Reaction Kinetics
Contribution to the study of chemical heat pumps: the $CaCl_2$-NH_3-heptanol system, 10:44544 (R;FR;In French)
CHEMICAL MUTAGENS
See MUTAGENS
CHEMICAL REACTION KINETICS
See also COMBUSTION KINETICS
Computerized Simulation
Guidelines for a thermochemical kinetics computer program, 10:45053 (R;US)
CHEMICAL REACTORS
Hydrodynamics
Three phase fluidized bed reactors: hydrodynamic characteristics and mixing of particles, 10:44775 (R;FR;In French)
Liners
Behavior of refractory linings for slagging gasifiers, 10:43631 (R;US)
CHEMICAL WASTES
Underground Disposal
Mapping pocket gopher burrow systems with expanding polyurethane foam, 10:45149 (J;US)
CHEMICALS

CALCIUM CHLORIDES
CESIUM CHLORIDES
IRON CHLORIDES
MANGANESE CHLORIDES
SODIUM CHLORIDES
THORIUM CHLORIDES
Ecological Concentration
Weldon Spring Site environmental monitoring report, calendar year 1984, 10:43888 (R;US)
CHLORINATED AROMATIC HYDROCARBONS
Combustion Products
Workshop proceedings: PCB by-product formation, 10:45282 (R;US)
Deposition
Executive summary. Part I. Trace metals: executive summary, 10:45111 (RA;US)
Ecological Concentration
Executive summary. Part I. Trace metals: executive summary, 10:45111 (RA;US)
Fires
Workshop proceedings: PCB by-product formation, 10:45282 (R;US)
Quantitative Chemical Analysis
Portable gas chromatograph for polychlorinated biphenyl (PCB) analysis. Final report, 10:45137 (R;US)
Sampling
Portable gas chromatograph for polychlorinated biphenyl (PCB) analysis. Final report, 10:45137 (R;US)
CHLORINE FLUORIDES
Hydrolysis
Reaction of chlorine trifluoride with water, 10:44796 (TJ;US)

CHO CELLS
Chromosomal Aberrations
Chromosomal aberrations of the Chinese hamster cell line V79 after irradiation with X-rays and heavy ions, 10:45219 (R;DE;In German)
Genetic Radiation Effects
Chromosomal aberrations of the Chinese hamster cell line V79 after irradiation with X-rays and heavy ions, 10:45219 (R;DE;In German)
Sensitivity
Differential toxicity of 3-aminobenzamide to wild-type and 6-thioguanine-resistant Chinese hamster cells by interference with pathways of purine biosynthesis, 10:45195 (J;NL)
CHOPPERS (NEUTRON)
See NEUTRON CHOPPERS
CHROMIUM
Emission Spectroscopy
Spectrographic analysis of stainless steels, 10:44746 (R;BR;In Portuguese)
CHROMIUM 52
Nuclear Radii
Nuclear sizes and densities of 1 fsub(7/2)-nuclei from pionic atoms and elastic scattering of α particles, 10:45695 (RA;DE)
CHROMIUM 53 TARGET
Carbon 12 Reactions
Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data, 10:45618 (R;SU;In Russian)
CHROMIUM CARBIDES
Sliding Friction
Selection and qualification of materials for relative motion and electrical isolation in a vacuum environment, 10:44685 (J;CH)
CHROMIUM-MOLYBDENUM STEELS
See also STEEL-10CD9-10
STEEL-15CD9-10
Aging
Thermal ageing studies of 9%Cr 1%Mo steel, 10:44613 (RA;XA)
Annealing
Some aspects of the creep and fracture properties of intercritically annealed 9Cr1Mo, 10:44614 (RA;XA)
Creep
Hydrogen attack in Cr-Mo steels at elevated temperatures. Final technical report, September 1, 1980-August 31, 1983, 10:44600 (R;US)
Influence of flowing sodium on creep rupture properties of type 316 and 9Cr1Mo steels, 10:44617 (RA;XA)
Some aspects of the creep and fracture properties of intercritically annealed 9Cr1Mo, 10:44614 (RA;XA)
Fatigue
Some elevated temperature tensile and strain-controlled fatigue properties for a 9%Cr1Mo steel heat treated to simulate thick section material, 10:44615 (RA;XA)
Fracture Properties
Influence of flowing sodium on creep rupture properties of type 316 and 9Cr1Mo steels, 10:44617 (RA;XA)
Some aspects of the creep and fracture properties of intercritically annealed 9Cr1Mo, 10:44614 (RA;XA)
UKAEA stress rupture results from tests performed in sodium, 10:44619 (RA;XA)
Impact Strength
Impact and hot tensile properties of 9Cr1Mo steel in various heat treatment conditions, 10:44612 (RA;XA)
Thermal ageing studies of 9%Cr 1%Mo steel, 10:44613 (RA;XA)
Ruptures
Influence of flowing sodium on creep rupture properties of type 316 and 9Cr1Mo steels, 10:44617 (RA;XA)
Tensile Properties
Impact and hot tensile properties of 9Cr1Mo steel in various heat treatment conditions, 10:44612 (RA;XA)
Some elevated temperature tensile and strain-controlled fatigue properties for a 9%Cr1Mo steel heat treated to simulate thick section material, 10:44615 (RA;XA)
Thermal ageing studies of 9%Cr 1%Mo steel, 10:44613 (RA;XA)

COAL
See also BLACK COAL
BROWN COAL
SUBBITUMINOUS COAL
Alkylation
Analysis and characterization of chemically modified coal macerals using density gradient centrifugation, 10:43649 (R;US)
Calorific Value
Ignition and combustion of utility grind coal-water slurry in a lean, confined, turbulent diffusion flame, 10:43704 (R;US)
Chemical Composition
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)

Chemical Properties
Chemistry and characterization of coal macerals: overview, 10:43654 (J;US)
Chemical Reaction Kinetics
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, 10:43701 (R;US)
Chemistry
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
Cleaning
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)
Combustion
Evaluation of combustion turbine systems for the direct combustion of coal, 10:43672 (J;US)
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Combustion Products
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Coordinated Research Programs
Biomass and coal conversion programs of the USAID/GOI Alternative Energy Resources Development Project. Trip report to India, May 22-June 2, 1983, 10:44479 (R;US)
Data Compilation
State Energy Overview 1983, 10:44506 (R;US)
Environmental Impacts
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Fluidized-Bed Combustion
Atmospheric pressure fluidized bed coal combustion test, 10:43695 (R;FR;In French)
Development of atmospheric fluidized bed combustion (FBC) boiler technology for power generation in Japan, 10:43694 (RA;CA)
Fluidized-Bed Combustors
First workshop on biomass and coal conversion programs of the USAID/GOI Alternative Energy Resources Development Project. Report on trip to India, November 7-19, 1983, 10:43699 (R;US)
Fuel Substitution
Technical/economic impacts and implications of using washed coals at New York State utilities. Final report, 10:43693 (R;US)
Grinding
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)
Health Hazards
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Imports
Potential for US steam-coal imports, 10:43707 (R;US)
Infrared Spectra
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
Market
Virginia coal industry: a study of the infrastructure. Final technical report, 10:43706 (R;US)
Mineralogy
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)
Molecular Structure
Electron spin resonance of isolated coal macerals, 10:43650 (R;US)
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
NMR Spectra
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
Oxidation
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, 10:43701 (R;US)
Particle Size
Ignition and combustion of utility grind coal-water slurry in a lean, confined, turbulent diffusion flame, 10:43704 (R;US)
Petrography
Analysis and characterization of chemically modified coal macerals using density gradient centrifugation, 10:43649 (R;US)
Petrology
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
Pneumatic Transport
Report on solids transport workshop, 10:43688 (R;US)
Prices
Virginia coal industry: a study of the infrastructure. Final technical report, 10:43706 (R;US)
Processing
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Pyrolysis
Flash pyrolysis of coal with reactive and non-reactive gases, 10:43616 (R;US)
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
Rail Transport
Virginia coal industry: a study of the infrastructure. Final technical report, 10:43706 (R;US)
Research Programs
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Reviews
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Solvent Extraction
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
Structural Chemical Analysis
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
Swelling
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)
Washing
Technical/economic impacts and implications of using washed coals at New York State utilities. Final report, 10:43693 (R;US)

COAL CHEMICALS
See COAL EXTRACTS

COAL DEPOSITS
See also COAL SEAMS
Leasing
[National Coal Policy Project]. Mining Task Force report submitted for review by the plenary, September 26-27, 1979, 10:43682 (R;US)
Resource Assessment
Peat resource estimation in Minnesota. Third quarter report, FY1985, 10:43680 (R;US)

COAL EXTRACTS
Infrared Spectra
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)
NMR Spectra
Structural concepts of coal and implications of dynamic interactions, 10:43651 (R;US)

COAL FINES
Pelletizing
Potential for disposal of plant waste agglomerates in spreader stoker boilers, 10:43949 (RA;US)

Surface Properties
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)
Washing
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)

COAL GASIFICATION
See also WESTINGHOUSE GASIFICATION PROCESS
Catalysts
Chemistry and mechanism of molten-salt catalysts in coal-gasification processes. Final report, January 1984-January 1985, 10:43633 (R;US)
Studies of metal/carbon surface chemistry. Reporting period: March 1, 1985-May 31, 1985, 10:43628 (R;US)
Desulfurization
Hydrogen sulfide removal from hot gas and concentration of sulfur using electrochemistry. Annual report, August 1983-August 1984, 10:43634 (R;US)
Environmental Impacts
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Summary of health and environmental research: coal gasification, 10:43674 (BA;US)
Health Hazards
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Summary of health and environmental research: coal gasification, 10:43674 (BA;US)
Process Control
Coal gasification in the molten-iron reactor. Performance of coal-gasification trials in a 60-t industrial converter of Eisenwerk-Gesellschaft Maximilianshuette MBH, 10:43632 (R;XE;GE)

COAL GASIFICATION PLANTS
Air Pollution Monitoring
Source discharges and ambient air pollution at the coal gasifier at Kosovo, 10:43643 (BA;US)
Chemical Effluents
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
Chemical Reactors
Behavior of refractory linings for slagging gasifiers, 10:43631 (R;US)
Source discharges and ambient air pollution at the coal gasifier at Kosovo, 10:43643 (BA;US)
University of Minnesota-Duluth low-Btu gasifier workplace environment, 10:43642 (BA;US)
Environmental Effects
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
University of Minnesota-Duluth low-Btu gasifier workplace environment, 10:43642 (BA;US)
Gaseous Wastes
Source discharges and ambient air pollution at the coal gasifier at Kosovo, 10:43643 (BA;US)
Health Hazards
University of Minnesota-Duluth low-Btu gasifier workplace environment, 10:43642 (BA;US)
Materials Testing
Behavior of pressurized Incoloy 800H tubes in environments pertaining to coal gasification, 10:43629 (R;US)
Monitoring
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
University of Minnesota-Duluth low-Btu gasifier workplace environment, 10:43642 (BA;US)
Occupational Safety
University of Minnesota-Duluth low-Btu gasifier workplace environment, 10:43642 (BA;US)
Organic Wastes
Model for evaluation of refinery and synfuels VOC (volatile organic compounds) emission data. Volume 1. Technical report and Appendix A. Final report, June 1983-September 1984, 10:45105 (R;US)
Model for evaluation of refinery and synfuels VOC (volatile organic compounds) emission data. Volume 2. Appendices B and C. Final report, June 1983-September 1984, 10:45106 (R;US)
Performance Testing
University of Minnesota-Duluth low-Btu gasifier workplace environment, 10:43642 (BA;US)
Pollutants
Source discharges and ambient air pollution at the coal gasifier at Kosovo, 10:43643 (BA;US)
Refractories
Behavior of refractory linings for slagging gasifiers, 10:43631 (R;US)
Solid Wastes
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)
Waste Management
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)
Waste Water
Catalytic wet oxidation of wastewater produced in slagging fixed-bed and stirred fixed-bed coal gasifiers, 10:43640 (BA;US)
Working Conditions
University of Minnesota-Duluth low-Btu gasifier workplace environment, 10:43642 (BA;US)

COAL INDUSTRY
Competition
Virginia coal industry: a study of the infrastructure. Final technical report, 10:43706 (R;US)
Investigations
Virginia coal industry: a study of the infrastructure. Final technical report, 10:43706 (R;US)
Market
1982 progress report for Charbonnages de France, 10:43705 (R;FR;In French)
Houilleres de France Annual statistics 1983, 10:43681 (R;FR;In French)
Taxes
Analysis of the impacts of the President's tax proposal on major sectors of the energy industry, 10:44478 (R;US)
Waste Management
Coal refuse disposal practices and challenges in the United States, 10:43661 (RA;US)

COAL LIQUEFACTION
See also EXXON LIQUEFACTION PROCESS
TSL PROCESS
Bench-Scale Experiments
Kinetic model development for low-rank coal liquefaction. Progress report, March 31-July 31, 1984, 10:43622 (R;US)
Kinetic model development for low-rank coal liquefaction. Progress report, August 1-December 31, 1984, 10:43623 (R;US)
Catalysis
Role of iron sulfides stoichiometry in the direct liquefaction of coal, 10:43620 (R;US)
Catalysts
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Chemical Reaction Kinetics
Kinetic model development for low-rank coal liquefaction. Progress report, March 31-July 31, 1984, 10:43622 (R;US)
Kinetic model development for low-rank coal liquefaction. Progress report, August 1-December 31, 1984, 10:43623 (R;US)
Chemical Reactors
Kinetic model development for low-rank coal liquefaction. Progress report, March 31-July 31, 1984, 10:43622 (R;US)
Chemistry
Effects of amine solvents and oxygen functionalities on coal liquefaction, 10:43630 (R;US)
Oxygen loss and the conversion of coal, 10:43619 (R;US)

Environmental Impacts
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Health Hazards
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Information
Online database for materials performance and design data for direct coal liquefaction, 10:43618 (R;US)
Information Systems
Online database for materials performance and design data for direct coal liquefaction, 10:43618 (R;US)
Organic Solvents
Coal liquefaction via low temperature, low pressure water-gas shift solvent hydrogenation, 10:43636 (R;US)
Effects of amine solvents and oxygen functionalities on coal liquefaction, 10:43630 (R;US)
Research Programs
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Technology Assessment
Status review of direct coal liquefaction technology, 10:43617 (R;US)
Yields
Kinetic model development for low-rank coal liquefaction. Progress report, March 31-July 31, 1984, 10:43622 (R;US)
Kinetic model development for low-rank coal liquefaction. Progress report, August 1-December 31, 1984, 10:43623 (R;US)
Role of iron sulfides stoichiometry in the direct liquefaction of coal, 10:43620 (R;US)

COAL LIQUEFACTION PLANTS
Environmental Impacts
Summary of health and environmental research: coal liquefaction, 10:43678 (BA;US)
Equipment
Online database for materials performance and design data for direct coal liquefaction, 10:43618 (R;US)
Feasibility Studies
Market trend analyses of coal hydrogenation - study, 10:43615 (R;DE;In German)
Gaseous Wastes
Extrapolation to health risk: use of comparative approaches, 10:43676 (BA;US)
Health Hazards
Summary of health and environmental research: coal liquefaction, 10:43678 (BA;US)
Information
Online database for materials performance and design data for direct coal liquefaction, 10:43618 (R;US)
Information Systems
Online database for materials performance and design data for direct coal liquefaction, 10:43618 (R;US)
Materials
Online database for materials performance and design data for direct coal liquefaction, 10:43618 (R;US)
Materials Testing
Online database for materials performance and design data for direct coal liquefaction, 10:43618 (R;US)
On-Line Measurement Systems
On-line capillary viscometer for a continuous liquefaction unit, 10:43641 (BA;US)
Solid Wastes
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)
Viscosimeters
On-line capillary viscometer for a continuous liquefaction unit, 10:43641 (BA;US)
Waste Management
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)

COAL LIQUIDS
Bioassay
Summary of health and environmental research: coal liquefaction, 10:43678 (BA;US)
Biological Effects
Summary of health and environmental research: coal liquefaction, 10:43678 (BA;US)
Chemical Composition
EDS coal liquefaction process development, Phase V. Quarterly technical progress report, January 1-March 31, 1985, 10:43621 (R;US)
Denitrification
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Hydrogenation
New technology concept for two-stage liquefaction of coal, 10:43626 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Mass Spectra
Effects of amine solvents and oxygen functionalities on coal liquefaction, 10:43630 (R;US)
Quantitative Chemical Analysis
Summary of health and environmental research: coal liquefaction, 10:43678 (BA;US)
Rheology
On-line capillary viscometer for a continuous liquefaction unit, 10:43641 (BA;US)
Structural Chemical Analysis
Effects of amine solvents and oxygen functionalities on coal liquefaction, 10:43630 (R;US)
Kinetic model development for low-rank coal liquefaction. Progress report, March 31-July 31, 1984, 10:43622 (R;US)
Toxicity
EDS coal liquefaction process development, Phase V. Quarterly technical progress report, January 1-March 31, 1985, 10:43621 (R;US)

COAL MINES
Degassing
Comparison of rotary and in-hole motor techniques for drilling horizontal boreholes in coal. Report of Investigations/1985, 10:43709 (R;US)
Pneumatic Transport
Safety aspects of pneumatic transport. Information Circular/1985, 10:43686 (R;US)
Power Systems
Mine power system safety and reliability improvement. Part 1. Report for 28 September 1979-30 September 1981, 10:44909 (R;US)

COAL MINING
Continuous Miners
Influence of continuous-miner bit sharpness and coal-lithotype composition on coal breakage: examples from Kentucky mines. Technical report, 10:43685 (R;US)
Cutting Tools
Device for in-situ measurement of coal-cutting forces. Report of Investigations/1985, 10:43687 (R;US)
Dusts
Development of a remote coal dust deposition rate monitor. Open file report, 15 September 1978-31 August 1983, 10:43668 (R;US)
Lithotypes
Influence of continuous-miner bit sharpness and coal-lithotype composition on coal breakage: examples from Kentucky mines. Technical report, 10:43685 (R;US)
Mineral Wastes
Runoff water quality and hydrology at coal refuse disposal sites in southern Illinois, 10:43673 (J;US)
Surface Mining
Draft environmental impact statement, Cummins Creek Project, Fayette County, Texas, 10:43669 (R;US)

COAL PREPARATION
Comminution
Influence of continuous-miner bit sharpness and coal-lithotype composition on coal breakage: examples from Kentucky mines. Technical report, 10:43685 (R;US)
Mathematical Models
Linear-programming-based coal preparation and blending technique. Final report, 10:43614 (R;US)
COAL SEAMS
Chemical Composition
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)
Degassing
Comparison of rotary and in-hole motor techniques for drilling horizontal boreholes in coal. Report of Investigations/1985, 10:43709 (R;US)
Swelling
Ultra-fine coal characterization. 5th quarterly report, March 1-May 31, 1985, 10:43692 (R;US)
COAL TAR
Carcinogen Screening
Studies on the tumor initiating, tumor promoting, and tumor co-initiating properties of respiratory carcinogens, 10:45259 (R;US)
Chemical Composition
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
Environmental Effects
Laboratory-scale simulation of coal gasification for biological studies, 10:43675 (BA;US)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Air Pollution Control
Evaluation of combustion turbine systems for the direct combustion of coal, 10:43672 (J;US)
Combustion Control
Evaluation of combustion turbine systems for the direct combustion of coal, 10:43672 (J;US)
Fuels
Evaluation of combustion turbine systems for the direct combustion of coal, 10:43672 (J;US)
COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES
COALTEK PROCESS
See FUEL FEEDING SYSTEMS
COASTAL REGIONS
Meteorology
Local scale atmospheric diffusion at a coastal site in the presence of breeze effect. (Phase III: Data elaboration and model development). Vol. 1, 10:45074 (R;XE)
COBALT
Catalytic Effects
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Procedure for the hydrodesulphurisation of a gas containing oxygen and organic sulphur compounds, 10:43750 (TG;GB)
Solvent Extraction
Glycine enhanced separation of Co(II) and Ni(II) with bis(2,4,4-trimethylpentyl)phosphinic acid [Cyanex 272] by liquid-liquid extraction and supported liquid membranes, 10:44763 (J;US)
COBALT 59 TARGET
Alpha Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Lithium 6 Reactions
Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data, 10:45618 (R;SU;In Russian)
COBALT 60
Skin Absorption
Absorption of radioisotopes from skin and wound, 10:45245 (RA;IN)
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Computerized Simulation
SIMULACHRON. A simulation mode for a combined heat and power production system, 10:44166 (R;DK)
Economic Analysis
Gas turbine systems research and development CWM industrial energy system application study. Third topical report, October 1, 1984-May 31, 1985, 10:44468 (R;US)
Feasibility Studies
[Cogeneration feasibility studies for Massachusetts]. Final technical report, 10:44561 (R;US)
Gas turbine systems for operation on coal-derived fuels. Final technical report, 10:44157 (R;US)
Gas turbine systems research and development CWM industrial energy system application study. Third topical report, October 1, 1984-May 31, 1985, 10:44468 (R;US)
Recommendations
Gas turbine systems for operation on coal-derived fuels. Final technical report, 10:44157 (R;US)
Systems Analysis
Gas turbine systems for operation on coal-derived fuels. Final technical report, 10:44157 (R;US)
COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS
COILS (MAGNETIC)
See MAGNET COILS
COKE
Chemical Composition
Studies on the degradation of cokes in the blast furnace, 10:43645 (TG;GB)
Combustion Properties
Studies on the degradation of cokes in the blast furnace, 10:43645 (TG;GB)
Mechanical Properties
Studies on the degradation of cokes in the blast furnace, 10:43645 (TG;GB)
Physical Properties
Properties and applications of coke-mix materials, 10:44712 (RA;DE)
Studies on the degradation of cokes in the blast furnace, 10:43645 (TG;GB)
Surface Coating
Carbon 84, 10:44713 (R;DE)
Properties and applications of coke-mix materials, 10:44712 (RA;DE)
COKING PLANTS
Waste Water
Catalytic wet oxidation of wastewater produced in slagging fixed-bed and stirred fixed-bed coal gasifiers, 10:43640 (BA;US)
COLD PLASMA
Alfven Waves
Cold plasma waves, 10:45819 (B;NL)
Plasma Waves
Cold plasma waves, 10:45819 (B;NL)
COLD STORAGE
Mixed clathrates for cool storage applications, 10:44445 (R;US)
COLLECTIVE ACCELERATORS
Beam Dynamics
Further studies of the NRL collective particle accelerator via numerical modeling with the MAGIC code. Final report, 1 April-30 September 1984, 10:44935 (R;US)
COLLECTRONS
See SELF-POWERED NEUTRON DETECTORS
COLLIDING BEAMS
Cherenkov Counters
Thoughts on an $e^+ e^-$ detector for RHIC, 10:45009 (R;US)

Lectures
CERN accelerator school: Antiprotons for colliding beam facilities. Proceedings, 10:44939 (R;XC)
Meetings

Pair Spectrometers
Thoughts on an e^+e^- detector for RHIC, 10:45009 (R;US)
Scintillation Counters
Thoughts on an e^+e^- detector for RHIC, 10:45009 (R;US)

COLLIERIES
See COAL MINES

COLLISIONAL PLASMA
Electron-Positron Collisions
Simple exotic system: Radiative formation of the positronium, 10:45383 (RA;DE)
Energy Losses
Dissipative trapped particle modes in tandem mirrors, 10:45794 (J;US)
Transport Theory
Investigation of pulsed high density plasmas, 10:45781 (R;NL)
Trapped-Particle Instability
Dissipative trapped particle modes in tandem mirrors, 10:45794 (J;US)
Viscosity
Viscous effects in a collisional tokamak plasma with strong rotation, 10:45788 (J;US)

COLOGNE SPIRITS
See ETHANOL

COLONIES
See POPULATIONS

COLOR MODEL
Relativistic Plasma
Boost-invariant Boltzmann-Vlasov equations for relativistic quark-antiquark plasma, 10:45694 (RA;DE)
Particle production from a condensing quark-gluon plasma, 10:45493 (RA;DE)

COLORADO
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)

COLUMBIA RIVER BASIN
Water Quality
Epidemiology and control of infectious diseases of salmonids in the Columbia River Basin. Annual report, FY 1983, 10:45264 (R;US)

COLUMBIUM
See NIOBIUM

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Air Pollution Control
Evaluation of combustion turbine systems for the direct combustion of coal, 10:43672 (J;US)
Coal-Fired Gas Turbines
Evaluation of combustion turbine systems for the direct combustion of coal, 10:43672 (J;US)
Comparative Evaluations
Evaluation of combustion turbine systems for the direct combustion of coal, 10:43672 (J;US)
Maintenance
Reliability, availability, and maintainability audit of the Cool Water Plant Units 3 and 4, Southern California Edison Company. Final report, 10:44159 (R;US)
Materials
Study of alkali- and sulfur-enhanced corrosion of advanced energy systems. Final report, 10:44510 (R;US)

COMBUSTION KINETICS
Mathematical Models
Derivation and numerical solution of the equations for zero Mach number combustion, 10:44852 (J;GB)

COMBUSTION PRODUCTS
Air Pollution
Temporal and spatial variability of the visual effects of stack plumes. Final report, 1 February 1983-1 January 1984, 10:45101 (R;US)
Air Pollution Abatement
Industrial boiler SO_2 cost report, 10:45100 (R;US)
Chemical Composition
Feasibility testing of micronized coal: oil (MICO) fuel in a model gas turbine combustor, 10:43696 (R;US)
Environmental Impacts
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Equations of State
Theoretical equations of state for the detonation products of explosives, 10:45059 (R;US)
Health Hazards
Overview and findings from Airlie House Retreat: Health and Environmental Research programs related to coal conversion technologies and their future directions, 10:43644 (BA;US)
Plumes
Temporal and spatial variability of the visual effects of stack plumes. Final report, 1 February 1983-1 January 1984, 10:45101 (R;US)
Stack Disposal
Temporal and spatial variability of the visual effects of stack plumes. Final report, 1 February 1983-1 January 1984, 10:45101 (R;US)
Sulfur Dioxide
Trends in sulfur dioxide emissions from the electric-utility industry and ambient sulfur dioxide concentrations in the northeastern United States, 1975-1982, 10:44175 (R;US)
Teratogen Screening
Development of an in vitro assay for teratogens. Progress report, 1 July 1983-31 August 1985, 10:45266 (R;US)

COMBUSTORS
See also CATALYTIC COMBUSTORS
PULSE COMBUSTORS
Materials
Study of alkali- and sulfur-enhanced corrosion of advanced energy systems. Final report, 10:44510 (R;US)

COMETS
Mass
Upper limits to the masses of objects in the solar comet cloud, 10:45329 (R;US)

COMMERCIAL BUILDINGS
Energy Conservation
Predicted energy conservation in existing small commercial buildings, 10:44526 (R;US)
Passive Solar Heating Systems
Design and analysis of passive-solar-heating solutions for neighborhood commercial-strip settings. Final report, 10:44075 (R;US)
Retrofitting
Predicted energy conservation in existing small commercial buildings, 10:44526 (R;US)

COMMUNICATIONS
Research Programs
ELF-VLF Communications through the Earth Project report for calendar year 1984. Revision 1, 10:44870 (R;US)

COMMUNITIES
Bibliographies
Buildings Energy Conservation: a current awareness bulletin, 10:44519 (J;US)
Economic Development
Implications and management of resource constraints: a community model for international development, 10:44457 (R;US)
Energy Conservation
Buildings Energy Conservation: a current awareness bulletin, 10:44519 (J;US)

Energy Management
Implications and management of resource constraints: a community model for international development, 10:44457 (R;US)
Resource Management
Implications and management of resource constraints: a community model for international development, 10:44457 (R;US)
COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Ion Beam Injection
Injection and trapping of energetic ions in compact torus configurations, 10:45816 (J;GB)
Reviews
Compact DT fusion spherical tori at modest fields, 10:45826 (R;US)
Trapping
Injection and trapping of energetic ions in compact torus configurations, 10:45816 (J;GB)
COMPOSITE MATERIALS
See also CONCRETE-PLASTIC COMPOSITES
Acoustic Emission Testing
Damage progression in fiber composites during repeated loading. Final report, 10:44688 (R;US)
Damage
Study of conditions that control damage progression in fiber composites during repeated loading, 10:44905 (RA;US)
Fabrication
Fiber-reinforced ceramic composites made by chemical vapor infiltration, 10:44687 (R;US)
Fibers
Early characterization of graphite composites by fiber testing, 10:44906 (RA;US)
Study of conditions that control damage progression in fiber composites during repeated loading, 10:44905 (RA;US)
Physical Radiation Effects
Radiation damage to plastics and coated fabrics - 1, 10:44689 (R;US)
Ultrasonic Waves
Ultrasonic longitudinal wave velocity in carbon-carbon Pitch and Pitch/M2 shape stable nosetip material from 70°F to 5400°F, 10:44578 (R;US)
COMPOUND-NUCLEUS REACTIONS
Computer Calculations
Application of nuclear model computer codes to nuclear data calculations, 10:45690 (RA;XA)
Fission Barrier
Recent advances in nuclear model code developments, 10:45689 (RA;XA)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPRESSIBLE FLOW
Flowmeters
Flow metering valve, 10:45049 (P;US)
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also C CODES
C Codes
Computer programmes for the control and data manipulation of a sequential x-ray-fluorescence spectrometer (The program X2 is used to control all functions of the spectrometer and CALGFS is the calculation program), 10:45022 (R;ZA)
Interactive FORTRAN program for the evaluation of structure factors and pair distribution functions from neutron diffraction experiments, 10:45725 (R;DE)
Modification in the CITATION computer code: change of microscopic cross section by zone, 10:44284 (R;BR;In Portuguese)
F Codes
Balancing experiment 1982 (BILEX '82) on the Unter Elbe River (Current simulation model MOHNA, transport model FLUSS), 10:45172 (R;DE;In German)
FURNACE; a toroidal geometry neutronic program system method description and users manual, 10:45842 (R;NL)
User's manual for Massachusetts Institute of Technology Solar Thermal Pond Program (MITSOL), 10:44097 (R;US)
G Codes
GRAFL-II: user oriented science graphics, 10:45921 (R;US)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. GASPROB code documentation, 10:43915 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Consequence assessments (GASPROB code), 10:43916 (R;CA)
I Codes
Description and directions for use of the IAO computer code for the data processing of the geothermal drilling test. Version 1.0 for the R2E MICRAL 21D system, 10:44117 (R;FR;In French)
Uncertainty in carbon emissions, 1975-2075, 10:45087 (R;US)
K Codes
FORTRAN-77 version of the Karlsruhe program system KAPROS, 10:45914 (R;DE;In German)
M Codes
Balancing experiment 1982 (BILEX '82) on the Unter Elbe River (Current simulation model MOHNA, transport model FLUSS), 10:45172 (R;DE;In German)
Matrix correction for PIXE in biomedical samples, 10:44749 (R;DE)
MONTEC, an interactive FORTRAN program to simulate radiation dose and dose-rate responses of populations, 10:45215 (R;CA)
Manuals
CONTROLITE 1.0 Lighting Control Systems and Daylighting Analysis Program: user's manual. Revision, 10:44545 (R;US)
Software tools programmer's manual, 10:45919 (R;US)
O Codes
ORMDIN: a finite element program for two-dimensional nonlinear inverse heat conduction analysis, 10:44386 (R;US)
P Codes
Parallel P-code for Parallel Pascal and other high level languages, 10:45922 (R;US)
Performance assessment of OTEC power systems and thermal power plants. Final report. Volume II. Users' manual for PACC-OTECs, 10:44026 (R;US)
Plotters
TRAP: plotting package for TRAC (Transient Reactor Analysis), 10:44381 (R;US)
S Codes
Matrix correction for PIXE in biomedical samples, 10:44749 (R;DE)
T Codes
TOM: a program for interactive lattice design, 10:44949 (R;US)
TRAC-PD2: advanced best-estimate computer program for pressurized water reactor loss-of-coolant accident analysis, 10:44403 (R;US)
V Codes
Computer-aided tube fretting-wear predictions (VIBIC code), 10:44892 (R;CA)
X Codes
Computer programmes for the control and data manipulation of a sequential x-ray-fluorescence spectrometer (The program X2 is used to control all functions of the spectrometer and CALGFS is the calculation program), 10:45022 (R;ZA)
COMPUTER GRAPHICS
Computer Codes
GRAFL-II: user oriented science graphics, 10:45921 (R;US)
COMPUTER PROGRAMS
See COMPUTER CODES
COMPUTER-AIDED DESIGN
Multivariable systems analysis and design, 10:44869 (RA;US)
Data Base Management
Modeling network data structures in relational-like data base management systems, 10:45927 (R;US)

COMPUTER-AIDED MANUFACTURING
Current CIM activities in the materials process engineering and fabrication directorate 7400, 10:44866 (R;US)
Data Base Management
Modeling network data structures in relational-like data base management systems, 10:45927 (R;US)
COMPUTERIZED SIMULATION
Computer Codes
TOM: a program for interactive lattice design, 10:44949 (R;US)
COMPUTERS
See also DIGITAL COMPUTERS
IBM COMPUTERS
Data Acquisition
Data acquisition with real-time plots, 10:44871 (R;US)
CONCENTRATING COLLECTORS
Design
Contribution to the theoretical and experimental study of solar photochemical reactors, 10:44088 (R;FR;In French)
Performance Testing
Contribution to the theoretical and experimental study of solar photochemical reactors, 10:44088 (R;FR;In French)
CONCENTRATIONS (RADIONUCLIDES)
See RADIOACTIVITY
CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Materials
Terrestrial photovoltaic research and development, 10:44013 (R;US)
Research Programs
Terrestrial photovoltaic research and development, 10:44013 (R;US)
CONCRETE-PLASTIC COMPOSITES
Polysil structures. Final report, 10:44706 (R;US)
CONDENSED AROMATICS
See also ANTHRACENE
BENZOPYRENE
NAPHTHALENE
PHENANTHRENE
PYRENE
Hydrogenation
Coal liquefaction via low temperature, low pressure water-gas shift solvent hydrogenation (Fluoranthene), 10:43636 (R;US)
Raman Spectroscopy
Multi-resonant four wave mixing spectroscopy of pentacene in naphthalene, 10:44803 (RA;US)
CONDENSER COOLING SYSTEMS
Design
Benefits of spirally enhanced tubes for steam condensers in minimum-weight cooling systems. Final report, 10:44887 (R;US)
CONDENSERS
Cleaning
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)
Corrosion
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)
Deposits
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)

PRESSURE VESSELS
REACTOR VESSELS
Design
Assessing reliability and useful life of containers for disposal of irradiated fuel waste, 10:43826 (R;CA)
Failures
Assessing reliability and useful life of containers for disposal of irradiated fuel waste, 10:43826 (R;CA)
Materials
Metallurgical analysis of a 304L stainless steel canister from the Spent Fuel Test - Climax, 10:44643 (R;US)
Reliability
Assessing reliability and useful life of containers for disposal of irradiated fuel waste, 10:43826 (R;CA)
Remote Handling
Use of commercial robotics in radioactive waste shipping and receiving, 10:43822 (R;US)
Service Life
Assessing reliability and useful life of containers for disposal of irradiated fuel waste, 10:43826 (R;CA)
CONTAINMENT
See also CONTAINMENT BUILDINGS
CONTAINMENT SYSTEMS
Materials Testing
Mechanical properties at high rates of strain of austenitic stainless steels in virgin and damaged conditions. Results and testing programme for containment of extreme dynamic loading conditions, 10:44261 (RA;XA)
CONTAINMENT BUILDINGS
Pressure Gradients
Effect of transverse venting on flame acceleration and transition to detonation in a large channel (PWR; BWR), 10:44428 (R;US)
Research Programs
Techniques and results from the internal pressurization of a 1/8 scale steel containment model, 10:44299 (R;US)
System Failure Analysis
Integrity of containment penetrations under severe accident conditions. FY84 annual report, 10:44412 (R;US)
Techniques and results from the internal pressurization of a 1/8 scale steel containment model, 10:44299 (R;US)
CONTAINMENT SYSTEMS
Fluid-Structure Interactions
Application of the coupled fluid-structure code PELE-IC to pressure-suppression analysis: annual report to NRC for 1979, 10:44374 (R;US)
Pressure Gradients
Final results of the Hydrogen Igniter Experimental Program, 10:44411 (R;US)
CONTAMINATION (INTERNAL)
See RADIONUCLIDE KINETICS
CONTINENTAL SHELF
Aerial Surveying
Project EASTMAR. Final report, 10:43710 (R;DK)
Environmental Quality
Environmental assessment of the Alaskan Continental Shelf. Final reports of principal investigators. Volume 3. Physical science studies, 10:45164 (R;US)
CONTINUOUS MINERS
Design
Device for in-situ measurement of coal-cutting forces. Report of Investigations/1985, 10:43687 (R;US)

Drill Bits
Influence of continuous-miner bit sharpness and coal-lithotype composition on coal breakage: examples from Kentucky mines. Technical report, 10:43685 (R;US)
Field Tests
Device for in-situ measurement of coal-cutting forces. Report of Investigations/1985, 10:43687 (R;US)
CONTROL ELEMENTS
Performance
Performance experience of ASEA-ATOM BWR control blades, 10:44201 (RA;US)
CONTROL RODS
See CONTROL ELEMENTS
CONTROL ROOMS
Display Devices
Human engineering guidelines for the evaluation and assessment of Video Display Units, 10:44312 (R;US)
CONTROL SYSTEMS
For automated processes including feedback.

Installation
Mechanical engineering, 10:44863 (RA;ZA)
Leaks
Water leak detection in the cooling system of the blast furnace walls, by using radiotracer techniques, 10:45162 (RA;BR)
COOPER REACTOR
Brownsville, Nebraska, USA
Steam Turbines
Characterization and evaluation of a turbine disc section containing a service crack, 10:44213 (R;US)
COPOLYMERS
Masking
Photochemically volatilized polysilanes: a new class of self-developing deep uv resists, 10:44783 (R;US)
Photochemistry
Photochemically volatilized polysilanes: a new class of self-developing deep uv resists, 10:44783 (R;US)
Research Programs
Improved polymers for enhanced oil recovery: synthesis and rheology. Final report (Copolymers of acrylamide with sodium-3-acrylamido-3-methyl-butanoate), 10:43718 (R;US)
Structural Chemical Analysis
Improved polymers for enhanced oil recovery: synthesis and rheology. Final report (Copolymers of acrylamide with sodium-3-acrylamido-3-methyl-butanoate), 10:43718 (R;US)
Synthesis
Improved polymers for enhanced oil recovery: synthesis and rheology. Final report (Copolymers of acrylamide with sodium-3-acrylamido-3-methyl-butanoate), 10:43718 (R;US)
Viscosity
Improved polymers for enhanced oil recovery: synthesis and rheology. Final report (Copolymers of acrylamide with sodium-3-acrylamido-3-methyl-butanoate), 10:43718 (R;US)
COPPER
Alpha Reactions
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Crystal Defects
Dependence of 1/f noise on defects induced in copper films by electron irradiation, 10:44651 (J;US)
Electric Conductivity
Dependence of 1/f noise on defects induced in copper films by electron irradiation, 10:44651 (J;US)
Emission Spectroscopy
Spectrographic analysis of stainless steels, 10:44746 (R;BR;In Portuguese)
Interatomic Forces
High-pressure ion-thermal properties of metals from ab initio interatomic potentials, 10:44649 (R;US)
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Melting
High-pressure ion-thermal properties of metals from ab initio interatomic potentials, 10:44649 (R;US)
Muon Reactions
Multiple Coulomb scattering of 7.3 and 11.7 GeV/c muons on Cu target, 10:45622 (R;SU;In Russian)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Pion Minus Reactions
Two particle correlations in pion-nucleus interactions at 40 GeV/c, 10:45505 (RA;PL)
Shock Waves
Condensed matter at high shock pressures, 10:45401 (R;US)
Spallation
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
COPPER ALLOYS
See also COPPER BASE ALLOYS
Entropy
Effect of spin-glass ordering on the specific heat of CuMn, 10:44658 (J;NL)
Specific Heat
Effect of spin-glass ordering on the specific heat of CuMn, 10:44658 (J;NL)
Spin Glass State
Spin dynamics of a Cu-Mn spin glass alloy, 10:44591 (R;US)
COPPER BASE ALLOYS
Sputtering
Sputtering properties of copper-lithium alloys at reactor-level temperatures and surface erosion rates, 10:45884 (J;NL)
COPPER OXIDES
Dissolution
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)
COPPER SELENIDES
Deposition
Development of stable high efficiency polycrystalline thin-film solar cells based on $CuInSe_2$. Final report, 16 March 1983-15 March 1984, 10:44012 (R;US)
COPPER SULFATES
Phase Diagrams
Study of alkali- and sulfur-enhanced corrosion of advanced energy systems. Final report, 10:44510 (R;US)
COPPER SULFIDES
Deposition
Spray pyrolysis processing and properties of thin film photovoltaic materials, 10:43996 (R;US)
Magnetic Susceptibility
Effects of pressure on the first-order phase transition of Cu_4SnS_4 and Cu_8GeS_6, 10:44779 (R;JP;In Japanese)

Phase Transformations
Effects of pressure on the first-order phase transition of Cu_4SnS_4 and Cu_8GeS_6, 10:44779 (R;JP;In Japanese)
Pyrolysis
Spray pyrolysis processing and properties of thin film photovoltaic materials, 10:43996 (R;US)
Transition Heat
Effects of pressure on the first-order phase transition of Cu_4SnS_4 and Cu_8GeS_6, 10:44779 (R;JP;In Japanese)

CRNL SUPERCONDUCTING CYCLOTRON
Research Programs
TASCC - the next five years, 10:44962 (R;CA)
CROLOY
Crack Propagation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)
Creep
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Embrittlement
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Fatigue
Comparison of low-cycle fatigue data of 2 1/4%CrMo steels, 10:44611 (RA;XA)
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Grain Boundaries
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Performance
1 x 2M steel performance in the BOR-60 steam generator, 10:44260 (RA;XA)
Pitting Corrosion
1 x 2M steel performance in the BOR-60 steam generator, 10:44265 (RA;XA)
Stress Relaxation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)
CROPS
Cultivation
No-till, fuel soil and time saver, 10:44558 (RA;US)
Till plant system, 10:44559 (RA;US)
Irrigation
Aerated drip irrigation, 10:45211 (RA;US)
CROSSED BEAMS
See COLLIDING BEAMS
CROSSROADS PROJECT
Operation Crossroads official report, Task Unit 1.52, 10:45064 (R;US)
Nuclear Explosions
Radioactive contamination of ventilation supply system, USS Crittenden, from Baker Explosion, Operation Crossroads. Final report, 10:45066 (R;US)
CROWN ETHERS
See POLYETHYLENE GLYCOLS
CRUDE OIL
See PETROLEUM
CRYOPUMPS
Design
Closed-loop cryogenic vacuum system for remote applications, 10:44911 (RA;US)
CRYOSTATS
Design
Ultrahigh-vacuum cryostat and sample manipulator for operation between 5 and 800 K, 10:44873 (J;US)
Performance
Ultrahigh-vacuum cryostat and sample manipulator for operation between 5 and 800 K, 10:44873 (J;US)

CRYSTAL GROWTH
Relaxation
Role of relaxation in epitaxial growth: A molecular-dynamics study, 10:45750 (J;US)
Vacancies
Influence of surfaces on vapor pressures, 10:45747 (J;US)
CRYSTAL LATTICES
Faraday Effect
Electronic properties of two-dimensional systems in sub-micron devices. Progress report, July 1, 1984-August 31, 1985, 10:45744 (R;US)
Ion Channeling
Catastrophic planar dechanneling in strained-layer superlattices, 10:45399 (R;US)
Pressure Effects
High pressure electron resonance studies of electronic, magnetic, and structural phase transitions. Final technical report, May 1, 1982-April 30, 1984, 10:45743 (R;US)
CRYSTALLINE ROCKS
See IGNEOUS ROCKS
CRYSTALLOGRAPHY
Order Parameters
Optimizing estimates of long-range order parameters with Bragg x-ray scattering data, 10:44576 (R;US)
CULTURES (CELLS)
See CELL CULTURES
CURIUM
Solvent Extraction
Lanthanides and trivalent actinides complexation by tripyridyl triazine, applications to liquid-liquid extraction, 10:43818 (R;FR;In French)
Voltametry
Coulometric determination of americium and curium for the preparation of reference solutions, 10:44737 (R;FR)
CURIUM 246 TARGET
Neutron Reactions
Evaluation of neutron nuclear data for ^{246}Cm and ^{247}Cm, 10:45678 (R;JP)
CURIUM 247 TARGET
Neutron Reactions
Evaluation of neutron nuclear data for ^{246}Cm and ^{247}Cm, 10:45678 (R;JP)
CURIUM PHOSPHIDES
Magnetic Susceptibility
Magnetic susceptibility of curium pnictides, 10:44848 (J;NL)
CURIUM SELENIDES
Magnetic Susceptibility
Magnetic susceptibility of curium pnictides, 10:44848 (J;NL)
CUTTING TOOLS
Rock-salt mine saw, 10:43875 (R;US)
Design
Device for in-situ measurement of coal-cutting forces. Report of Investigations/1985, 10:43687 (R;US)
Diamonds
Chip science: research on single-point machining, 10:44868 (RA;US)
Field Tests
Device for in-situ measurement of coal-cutting forces. Report of Investigations/1985, 10:43687 (R;US)
CYANINE DYES
Fluorescence
Molecular architecture in cyanine dye aggregates at the air-water interface. Effect of monolayer composition and organization on fluorescent behavior, 10:44812 (J;US)
CYCLES (THERMODYNAMIC)
See THERMODYNAMIC CYCLES
CYCLIC ESTERS
See LACTONES
CYCLOALKANES
Molecular Structure
Description of chemical reactions by the method of the Full Optimized Reaction Space. The ring-opening of unsubstituted and substituted cyclopropylidene to allene, 10:44804 (R;US)
Optical Activity
Description of chemical reactions by the method of the Full Optimized Reaction Space. The ring-opening of unsubstituted and substituted cyclopropylidene to allene, 10:44804 (R;US)
CYCLOTRON INSTABILITY
Low-frequency instabilities driven by an ion-temperature anisotropy. Memorandum report, October 1984-October 1985, 10:45778 (R;US)
CYCLOTRONS
Beam Injection
Optical properties of the electrostatic mirror: application to the Orsay project, 10:44977 (R;FR;In French)
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Heat Transfer
Lumped-parameter models for transient conduction in nuclear reactor components, 10:44380 (R;US)
CYTOCHROMES
Electron Transfer
Application of electron-transfer theory to several systems of biological interest, 10:43979 (R;US)

D

D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
Particle Production
Hadroproduction of charmed particles, 10:45506 (RA;PL)
Study of charm production in proton-proton interactions at $\sqrt{s}$ = 62 GeV with a forward K-trigger, 10:45463 (D;US)
D REGION
D-region physical chemistry, 10:45060 (R;US)

D/sup / decays: Do theory and experiment agree?, 10:45522 (J;US)
Photoproduction
Study of D/sup / production in high-energy γp interactions, 10:45457 (J;US)
Radiative Decay
D/sup / decays: Do theory and experiment agree?, 10:45522 (J;US)
DAMS
Wildlife impact assessment and mitigation summary: Montana Hydroelectric Projects. Volume III. Hungry Horse Dam. Final report, 10:45186 (R;US)
Biological Effects
Evaluation of vaginal implants for mule deer, 10:45134 (J;US)
Environmental Effects
Fish passage improvements at Three Mile Falls Diversion Dam, Umatilla River, Oregon. Final completion report, 10:45190 (R;US)
Impacts of water levels on breeding Canada geese and the methodology for mitigation and enhancement in the Flathead drainage. Annual report, 1984, 10:43966 (R;US)
Yakima River Spring Chinook Enhancement Study. Annual report, FY 1984, 10:45189 (R;US)
DATA ACQUISITION SYSTEMS
Data acquisition with real-time plots, 10:44871 (R;US)
Equipment Interfaces
Navy aircraft support data systems study: ECAMS/NALCOMIS integration feasibility and procedure, 10:45920 (R;US)
DATA BASE MANAGEMENT
Design
Logical and physical database design within a full-text environment, 10:45928 (R;US)

DATA DISPLAY DEVICES
See DISPLAY DEVICES
DATA DISPLAY SYSTEMS
See DISPLAY DEVICES
DATA PROCESSING
Manipulation of unit facts.
Data Base Management
Data model and the design of a scientific database management system, 10:45918 (R;US)
DATA PROCESSORS
See DIGITAL COMPUTERS
DATA STORAGE DEVICES
See MEMORY DEVICES
DCI ORSAY STORAGE RING
Charged Particle Detection
Analysis and realization of a high resolution trigger for DM2 experiment, 10:45019 (R;FR;In French)
Trigger Circuits
Analysis and realization of a high resolution trigger for DM2 experiment, 10:45019 (R;FR;In French)
DEAERATORS
Transients
Suction effects on feedpump performance: a literature survey, 10:44164 (R;US)
DEBRIS (NUCLEAR)

DECONTAMINATION
Meetings
Decontamination of nuclear facilities. Keynote addresses, 10:43889 (R;CA)
Technical papers presented at a DOE meeting on criteria for cleanup of transuranium elements in soil, 10:45143 (R;US)
DECONTAMINATION FACTOR
See DECONTAMINATION
DEEP INELASTIC HEAVY ION REACTIONS
Angular Momentum Transfer
Contribution to very inelastic collisions. Emission mechanism of light charged particles and angular momentum transfer in ^{40}Ar (280 MeV) + ^{58}Ni nuclear reactions, 10:45617 (R;FR;In French)
Entropy
Composite particles and entropy production in relativistic nuclear collisions, 10:45681 (R;DE)
Fragmentation
Energy dissipation in nucleus-nucleus collisions around 40 MeV per nucleon. New phenomena or transition trends, 10:45633 (R;FR)
Intermediate Resonance
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
Linear Momentum Transfer
Energy dissipation in nucleus-nucleus collisions around 40 MeV per nucleon. New phenomena or transition trends, 10:45633 (R;FR)
Mass Spectra
Dynamics of the mass asymmetry, 10:45685 (RA;DE)
Nuclear Matter
Theory of and effects from elastoplasticity in nucleus-nucleus collisions, 10:45687 (R;DE)
Nuclear Models
Unified model for dissipative heavy-ion collisions, 10:45684 (RA;DE)
Nuclear Reaction Kinetics
Unified model for dissipative heavy-ion collisions. On the dynamics of the mass asymmetry, 10:45686 (R;DE)
Particle Production
Composite particles and entropy production in relativistic nuclear collisions, 10:45681 (R;DE)
Relativistic Range
Composite particles and entropy production in relativistic nuclear collisions, 10:45681 (R;DE)
Spallation Fragments
Contribution to very inelastic collisions. Emission mechanism of light charged particles and angular momentum transfer in ^{40}Ar (280 MeV) + ^{58}Ni nuclear reactions, 10:45617 (R;FR;In French)
DEER
Biology
Evaluation of vaginal implants for mule deer, 10:45134 (J;US)
Population Dynamics
Estimation of survival rates from band recoveries of mule deer in Colorado, 10:45140 (J;US)
DEFENSE
See NATIONAL DEFENSE
DEFORMED NUCLEI
L-S Coupling
Spin-orbit interaction in strongly deformed nuclides, 10:45715 (J;NL)
DEGASSING
Measuring Methods
Automated system for measuring vacuum outgassing rates, 10:44913 (R;US)
DEGREE DAYS
Calculation Methods
Variable-base degree-day correction factors for energy savings calculations, 10:44079 (R;US)
Corrections
Variable-base degree-day correction factors for energy savings calculations, 10:44079 (R;US)
Regression Analysis
Estimation of reference or balance point temperatures, 10:44525 (R;US)
DEHPA

DENITRIFICATION
Catalysts
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Use of immobilized iron chelate catalysts for the combined removal of NO/sub x/ and SO/sub x/ from combustion flue gases. Final technical report, August 15, 1984-May 14, 1985, 10:43656 (R;US)
Feasibility Studies
Development of a combined NO/sub x/SO_2 removal system based on ZnO scrubbing technology. Fourteenth monthly technical progress report, July 1-July 31, 1985, 10:43655 (R;US)
DENSITOMETERS
Performance Testing
Two-phase flow measurements with advanced instrumented spool pieces, 10:44379 (R;US)
DENTISTRY
Radiation Doses
Field study to evaluate radiation doses in dental practices, 10:45202 (R;DE;In German)
Information value of different methods of dental radiology with special regard to periodontal diagnosis, 10:45231 (R;DE;In German)
DEOXYCYTIDINURIA

DEPOSITS
Scanning Electron Microscopy
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)

DESALINATION PLANTS
Feasibility Studies
Southwest region solar pond study for three sites: Tularosa Basin, Malaga Bend, and Canadian River, 10:44019 (R;US)
DESERTRON
See SUPERCONDUCTING SUPER COLLIDER
DESOXYRIBONUCLEIC ACID
See DNA
DESULFURIZATION
Catalysts
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Seed regeneration processes for coal fired MHD power plants, 10:44509 (R;US)
Use of immobilized iron chelate catalysts for the combined removal of NO/sub x/ and SO/sub x/ from combustion flue gases. Final technical report, August 15, 1984-May 14, 1985, 10:43656 (R;US)
Citrates
Pilot study of Flakt-Boliden desulfurization process. Final report, 10:43659 (R;US)
Efficiency
Continuous emission monitoring for industrial boilers, General Motors Corporation, Assembly Division, St. Louis, Missouri. Volume I. System configuration and results of the operational test period. Final report, 10:43660 (R;US)
Feasibility Studies
Development of a combined NO/sub x/SO_2 removal system based on ZnO scrubbing technology. Fourteenth monthly technical progress report, July 1-July 31, 1985, 10:43655 (R;US)
Lime-Limestone Wet Scrubbing Processes
Adipic acid enhanced flue gas desulfurization process for industrial boilers: Volume 1. Field test results. Project summary, 10:43665 (R;US)
DETECTION (NUCLEAR EXPLOSIONS)
See NUCLEAR EXPLOSION DETECTION
DETECTORS (RADIATION)
See RADIATION DETECTORS
DETONATION LIMITS
Measuring Methods
Determination of limits of flammability of gases and gas mixtures in air, 10:43761 (TG;GB)
DEUTERIUM
Atom-Molecule Collisions
Recent calculations of muon-catalyzed d-t fusion, 10:45380 (RA;DE)
Autoionization
Experimental study of the role of autoionizing states of H_2 (D_2) in the production of energetic protons (deuterons) by electron impact, 10:45351 (R;FR;In French)
Breakdown
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Electron Attachment
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Hadronic Atoms
X-rays from anti-protonic hydrogen and deuterium, 10:45434 (RA;DE)
Ion-Atom Collisions
Scattering cross sections of muonic hydrogen atoms on hydrogen isotope nuclei, 10:45381 (RA;DE)
Isotope Effects
[Charge separation in photoredox reactions]. Informal annual technical progress report, October 1, 1982-August 1, 1983, 10:44799 (R;US)
L-ascorbic acid quenching of singlet delta molecular oxygen in aqueous media: generalized antioxidant property of vitamin C, 10:44817 (J;US)
Muonic Atoms
Nuclear muon capture by deuterons, 10:45356 (RA;DE)
Muonic Molecules
High accuracy calculations of energy levels of exited states of ddμ- and dtμ-mesic molecules, 10:45376 (RA;DE)
Relativistic corrections to the energy levels of ddμ and dtμ muonic molecules, 10:45377 (RA;DE)
Nuclear Magnetic Resonance
Deuterium NMR of deuterated probes dissolved in stretched polyethylene, 10:44802 (RA;IL)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Nucleosynthesis
Big bang photosynthesis and pregalactic nucleosynthesis of light elements, 10:45337 (J;US)
Tracer Techniques
Rotational predissociation of Ar-HD van der Waals complex: space-fixed complex-coordinate coupled-channel calculations, 10:44789 (J;NL)
Stability and structure of β-fluoro-substituted radical anions of acetamides. An EPR study at 3 K, 10:44816 (J;NL)
Two-Body Problem
W-matrix: A new method for solving the two-body problem, 10:45752 (R;DE)
DEUTERIUM COMPOUNDS
Muonic Molecules
Application of the Faddeev-Hahn equations to the mesomolecular system calculation, 10:45374 (RA;DE)
High accuracy calculations of energy levels of exited states of ddμ- and dtμ-mesic molecules, 10:45376 (RA;DE)
Relativistic corrections to the energy levels of ddμ and dtμ muonic molecules, 10:45377 (RA;DE)
DEUTERIUM OXIDES
See HEAVY WATER
DEUTERIUM TARGET
Deuteron Reactions
Cycle-by-cycle analysis of muon catalysed fusion in a one-component medium, 10:45593 (R;SU)
Electron Reactions
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)
Kaon Minus Reactions
Relatively stable strange dibaryons, 10:45498 (RA;DE)
Muon Reactions
Nuclear muon capture by deuterons, 10:45356 (RA;DE)
Neutrino Reactions
Neutron and proton structure functions from inelastic antineutrino scattering in deuterium, 10:45448 (RA;PL)
Nuclear Reactions
Tensor polarized deuteron targets for intermediate energy physics experiments, 10:45584 (R;DE)
Pion Reactions
Calculation of total cross sections of the hadron- nucleus interaction at low energies, 10:45595 (R;SU;In Russian)
Possible existence of narrow (ΔN) resonances, 10:45491 (RA;DE)
Polarized Targets
Polarized targets and beams, 10:44963 (R;DE)
Proton Reactions
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Three-body approach to the d(N, 2N)N reaction, 10:45588 (R;SU;In Russian)
DEUTERON REACTIONS
Compound-Nucleus Reactions
Excitation of breathing resonances under the S-shell nuclei scattering by α-particle, 10:45587 (R;SU;In Russian)
Nuclear Reaction Kinetics
Cycle-by-cycle analysis of muon catalysed fusion in a one-component medium, 10:45593 (R;SU)
Determination of parameters of the muon catalysis process from thee analysis of experimental time distribution of successively detected events of fusion reactions, 10:45594 (R;SU;In Russian)
Successively detected events of the multiple muon catalysis process, 10:45596 (R;SU;In Russian)
Particle Production
Study of the cumulative effect in meson and nucleonic system production, 10:45632 (R;RO;In Romanian)

Scale Invariance
Study of the cumulative effect in meson and nucleonic system production, 10:45632 (R;RO;In Romanian)
Thermonuclear Reactions
Cycle-by-cycle analysis of muon catalysed fusion in a one-component medium, 10:45593 (R;SU)
Determination of parameters of the muon catalysis process from thee analysis of experimental time distribution of successively detected events of fusion reactions, 10:45594 (R;SU;In Russian)
Successively detected events of the multiple muon catalysis process, 10:45596 (R;SU;In Russian)
Triton Reactions
Determination of parameters of the muon catalysis process from thee analysis of experimental time distribution of successively detected events of fusion reactions, 10:45594 (R;SU;In Russian)

DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS

DEUTERONS
Form Factors
Relativistic rotation of spin and asymptotic behaviour of the form factor of the composite system, 10:45589 (R;SU)
Spin Orientation
Relativistic rotation of spin and asymptotic behaviour of the form factor of the composite system, 10:45589 (R;SU)

DEVICES
See EQUIPMENT

DEVOLATILIZATION
Pressure Effects
On the role of heating rate in rapid coal devolatilization, 10:43638 (BA;US)

DEXTRAN
Photolysis
Study of structured mixtures water-dextran by radiolysis and photolysis. Case of electron transfer between zinc porphyrin and methylviologen, 10:44833 (R;FR;In French)
Radiolysis
Study of structured mixtures water-dextran by radiolysis and photolysis. Case of electron transfer between zinc porphyrin and methylviologen, 10:44833 (R;FR;In French)

DIABLO CANYON-1 REACTOR
Avila Beach, California, USA
Water Pollution
Concentration and speciation of copper in waters collected near the San Onofre and Diablo Canyon Nuclear Power Stations, 10:44318 (R;US)

DIABLO CANYON-2 REACTOR

Survival Curves
Factors determinating the shape of survival curves of Escherichia coli cells irradiated by ionizing radiation with different LET. Peculiarities of genome organization and the shape of survival curves, 10:45233 (R;SU;In Russian)
ESTUARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS
ETHANE
Data Compilation
Petroleum Supply Monthly, June 1985, 10:43727 (R;US)
Electron-Molecule Collisions
(e,2e) reactions on atoms and molecules, 10:45393 (RA;US)
Radiolysis
Radiolysis of methane-ethylene and methane-ethane mixtures flow system induced by electron irradiation using none-recycling, 10:44836 (R;JP;In Japanese)
ETHANOL
Production
Continous alcohol fermentation (6 gal/hr), 10:43943 (RA;US)
Synthesis
Chemical raw materials from coal; development of a process for the production of higher oxygen-containing compounds from methanol - laboratory stage, 10:43942 (R;DE;In German)
ETHERS
See also ANISOLE
Adsorption
Adsorption, dissociation and desorption of medium-sized organic compounds, 10:44801 (RA;AT;In German)
Desorption
Adsorption, dissociation and desorption of medium-sized organic compounds, 10:44801 (RA;AT;In German)
Dissociation
Adsorption, dissociation and desorption of medium-sized organic compounds, 10:44801 (RA;AT;In German)
ETHNIC GROUPS
See MINORITY GROUPS
ETHOCEL
See CELLULOSE ETHERS
ETHYL ALCOHOL
See ETHANOL
ETHYLENE
Detonation Limits
Determination of limits of flammability of gases and gas mixtures in air, 10:43761 (TG;GB)
Radiolysis
Radiolysis of methane-ethylene and methane-ethane mixtures flow system induced by electron irradiation using none-recycling, 10:44836 (R;JP;In Japanese)
Yields
Flash pyrolysis of coal with reactive and non-reactive gases, 10:43616 (R;US)
ETHYLENE POLYMERS
See POLYETHYLENES
EUROPEAN COMMUNITIES
Air Pollution
Exchange of information concerning atmospheric pollution by certain sulfur compounds and suspended particulates in the European Community. Annual report for January to December 1978, 10:45093 (R;FR)
Energy Demand
EC (energy conversion) medium-term energy-demand model: present state and recent results, 10:44471 (R;XE)
EUROPEAN ORGANIZATION FOR NUCLEAR RESEARC
See CERN
EUROPIUM 151
Isomer Shift
Moessbauer isomer shift in intermetallic compounds of europium and gadolinium, 10:44607 (R;NL)
Moessbauer Effect
Moessbauer isomer shift in intermetallic compounds of europium and gadolinium, 10:44607 (R;NL)
EUROPIUM 155
Geochemistry
Radionuclide Migation Project 1984 progress report, 10:45180 (R;US)
EUROPIUM BASE ALLOYS
Electronic Structure
Moessbauer isomer shift in intermetallic compounds of europium and gadolinium, 10:44607 (R;NL)
EUROPIUM PHOSPHATES
Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
Raman Spectroscopy
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
X-Ray Diffraction
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
EUROPIUM PHOSPHIDES
Moessbauer Effect
Anomalous behavior of the Moessbauer resonance width in mixed-valence $EuNi_2P_2$, 10:44673 (J;US)
EUTROPHICATION
Mathematical Models
State of the Middle Great Lakes: results of the 1983 water quality survey of Lakes Erie, Huron, and Michigan, 10:45185 (R;US)
EUXENITE
Annealing
EXAFS studies of metamict materials, 10:44703 (R;US)
Fourier Transformation
EXAFS studies of metamict materials, 10:44703 (R;US)
Physical Radiation Effects
EXAFS studies of metamict materials, 10:44703 (R;US)
EVALUATED NUCLEAR DATA FILE
See NUCLEAR DATA COLLECTIONS
EVAPORATORS
Development of flat-plate solar collector-evaporator. Report for 11 January 1980-31 March 1981, 10:44094 (R;IL)
EVAPORITES
Quantitative Chemical Analysis
Trace constituents in evaporites, 10:43872 (RA;US)
EVEN-EVEN NUCLEI
Even protons, even neutrons.

EXCHANGE (HEAT)
See HEAT TRANSFER

EXCRETION FUNCTIONS
See RETENTION FUNCTIONS

EXHAUST GASES
Air Pollution Abatement
Cost of selected trap-oxidizer system components for heavy-duty vehicles. Final report, 10:44573 (R;US)

Carcinogen Screening
Studies on the tumor initiating, tumor promoting, and tumor co-initiating properties of respiratory carcinogens, 10:45259 (R;US)

EXOELECTRON DOSEMETERS
Performance
Dosimetry by stimulated exoelectronic emission of apatites and dental biomaterials, 10:45015 (R;FR;In French)

EXOTIC ATOMS
See HADRONIC ATOMS

EXOTIC RESONANCES
Search for exotic particles in the decay of K^+, 10:45426 (RA;DE)

Glueballs
Gluinonium: The hydrogen atom of supersymmetry, 10:45523 (J;NL)

EXPERIMENTAL DATA
Neutron Reactions
Measurements of total cross sections of molybdenum and cadmium in the 20-1100 keV range on neutron filtered beam, 10:45649 (R;SU;In Russian)

EXPERIMENTAL FACILITIES (ACCELERATOR)
See ACCELERATOR FACILITIES

EXPOSURE CHAMBERS
Design
Design, construction, and testing of a dc bioeffects enclosure for small animals. Final report, 10:45281 (R;US)
Field air-exclusion system for measuring the effects of air pollutants on crops. Final report, 10:45271 (R;US)

EXPOSURE (RADIATION DOSES)
See RADIATION DOSES

EXTRACTION CHROMATOGRAPHY
Retention Functions
Fundamental studies of separation processes. Technical progress report, 10 August 1984-16 July 1985, 10:44797 (R;US)

EXTREMELY HIGH FREQUENCY RADIATION

FALLOUT
For radioactive fallout only.
Deposition
Deposition and retention of air pollutants on vegetation and other atmospheric interfaces, 10:45097 (R;DE;In German)

Mathematical Models
Model for world-wide fallout in the Northern Hemisphere. Master's thesis, 10:45120 (R;US)

Radiation Doses
Incorporation of Hopkins variable wind model into a population-dose fallout code. Master's thesis, 10:45118 (R;US)

FALLOUT PARTICULATES
See FALLOUT

FARADAY EFFECT
Two-Dimensional Calculations
Electronic properties of two-dimensional systems in sub-micron devices. Progress report, July 1, 1984-August 31, 1985, 10:45744 (R;US)

FARADAY GENERATORS
See MHD GENERATORS

FARADAY ROTATION
See FARADAY EFFECT

FARLEY-1 REACTOR
Dothan, Alabama, USA

Radioactive Effluents
Technical evaluation of RETS-required reports for Joseph M. Farley Nuclear Plant, Units 1 and 2 for 1983, 10:44316 (R;US)

FARLEY-2 REACTOR
Dothan, Alabama, USA
Radioactive Effluents
Technical evaluation of RETS-required reports for Joseph M. Farley Nuclear Plant, Units 1 and 2 for 1983, 10:44316 (R;US)

FARMS
Ethanol Plants
Continous alcohol fermentation (6 gal/hr), 10:43943 (RA;US)
Wind Power Plants
Let's cash crop the fence row and the water flow, 10:44139 (RA;US)

FAST BREEDER TYPE REACTORS
See FBR TYPE REACTORS

FASTENERS
Stress Corrosion
Investigation of corrosion and stress corrosion cracking in bolting materials on light water reactors, 10:44215 (R;US)

FAST-MIXED SPECTRUM REACTOR
See FBR TYPE REACTORS

FATTY ACIDS
See CARBOXYLIC ACIDS

FAULT TREE ANALYSIS
Computer Calculations
Phased mission analysis of maintained systems. A study in reliability and risk analysis, 10:44343 (R;NL)

FAULT TREE SYSTEMS
See FAULT TREE ANALYSIS

FAURE CYCLOTRON
See NAC CYCLOTRON

FBR TYPE REACTORS
See also LMFBR TYPE REACTORS
Building Materials
Interrelationship between material strength and component design under elevated temperature for FBR, 10:44269 (RA;XA)
Containment
Mechanical properties at high rates of strain of austenitic stainless steels in virgin and damaged conditions. Results and testing programme for containment of extreme dynamic loading conditions, 10:44261 (RA;XA)
Fuel Cans
Analysis of clad motion phenomena; application of the CMOT-II-code to clad melting experiments, 10:44362 (R;DE;In German)
Loss of Flow
Analysis of clad motion phenomena; application of the CMOT-II-code to clad melting experiments, 10:44362 (R;DE;In German)
Mechanical Structures
Japanese R and D programme on the crack propagation properties for the FBR structural safety analysis, 10:44263 (RA;XA)
Nuclear Data Collections
Status of the nuclear data library KEDAK-4 - October 1984, 10:44285 (R;DE)
Reactor Kinetics
FORTRAN-77 version of the Karlsruhe program system KAPROS, 10:45914 (R;DE;In German)
Reactor Materials
Interrelationship between material strength and component design under elevated temperature for FBR, 10:44269 (RA;XA)
Welded Joints
Evaluation method of creep and fatigue strength for FBR welded joints, 10:44262 (RA;XA)

FEDERAL REGION I
Prior to June 1982 this concept was indexed to NORTH ATLANTIC REGION.
See also CONNECTICUT

FERMI LIQUID
See FERMI GAS

FERMI-DIRAC GAS
See FERMI GAS

FERMILAB ACCELERATOR
Facility at Fermi National Accelerator Laboratory, Batavia, Illinois, includes main synchroton, booster synchrotron, and linac.
Antiproton Beams
Suppression of propagating TE modes in the FNAL antiproton source stochastic beam cooling system, 10:44956 (R;US)
Beam Bending Magnets
Pulsed power supplies for the Fermilab 1 TeV switchyard, 10:44973 (R;US)
Beam Injection
Control and initial operation of the Fermilab BO low β insertion, 10:44976 (R;US)
Synchronization
Fermilab timeline generation system, 10:44950 (R;US)
Timing Circuits
Fermilab timeline generation system, 10:44950 (R;US)

FERMILAB TEVATRON
Beam Luminosity
Collider performance with ideal collisions, 10:44994 (R;US)
Beam Transport
Design, installation, and commissioning of the D0 overpass at the Fermilab main ring, 10:44946 (R;US)
Colliding Beams
Collider performance with ideal collisions, 10:44994 (R;US)
Computerized Control Systems
Tevatron extraction microcomputer, 10:44975 (R;US)
Electrostatic Septa
Improvement of the high voltage properties of the Fermilab electrostatic septa, 10:44947 (R;US)
Septum Magnets
Pulsed septum magnet for the Fermilab antiproton source, 10:44948 (R;US)
Synchronization
Fermilab timeline generation system, 10:44950 (R;US)

FERMIONS
Flavor Model
Fermion mass hierarchy as a consequence of the spontaneous breakdown of the four-flavor symmetry, 10:45539 (J;US)
Ground States
Constructive approach to the ground-state energy of a hard-core square-well fermion system, 10:45467 (R;FR)
Mass
Fermion mass hierarchy as a consequence of the spontaneous breakdown of the four-flavor symmetry, 10:45539 (J;US)

FERMIUM 246
Nucleosynthesis
Some problems of fusion and fission of heavy nuclear systems, 10:45674 (RA;SU;In Russian)

FERRIC COMPOUNDS
See IRON COMPOUNDS

FERRITIC STEELS
Corrosion
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Leaching
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Welded Joints
Seminar on dissimilar welds in fossil-fired boilers: proceedings, 10:44161 (R;US)

FERROMAGNETIC MATERIALS
Eddy Current Testing
Eddy current inspection of mildly ferromagnetic tubing, 10:44898 (R;CA)
Electron Collisions
Introduction to electronic excitations, 10:45386 (RA;US)
Neutron Transport

Environmental radioactivity at the National Nuclear Research Centre, Pelindaba. Report for the year 1983, 10:45178 (R;ZA)
Radioactivity
Environmental radioactivity at the National Nuclear Research Centre, Pelindaba. Report for the year 1983, 10:45178 (R;ZA)
Research Programs
Status review of wildlife mitigation Columbia Basin hydroelectric projects. Columbia River mainstem facilities. Final report, 1984, 10:43965 (R;US)
Spatial Distribution
Savannah River Aquatic Ecology Program. Volume I. Adult fish. Annual report, November 1983-August 1984, 10:45183 (R;US)
Tolerance
Fish and food organisms in acid mine waters of Pennsylvania, 10:43666 (R;US)
FISHWAYS
See FISH PASSAGE FACILITIES
FISSION
Mathematical Models
Dynamical theories of nuclear fission, viscosity and dissipative effects, 10:45692 (RA;XA)
Nuclear Data Collections
Progress in fission product nuclear data. Information about activities in the field of measurements and compilations/evaluations of fission product nuclear data (FPND), 10:45572 (R;XA)
FISSION BARRIER
Mathematical Models
Static theories of the fission barrier, 10:45693 (RA;XA)
FISSION FRAGMENTS
Charge Distribution
Mass, charge and kinetic energy distribution of fission fragments, 10:45669 (RA;XA)
Energy Spectra
Fission-fragment kinetic-energy distributions from a two-dimensional Fokker-Planck equation, 10:45664 (J;NL)
Kinetic Energy
Mass, charge and kinetic energy distribution of fission fragments, 10:45669 (RA;XA)
Mass
Mass, charge and kinetic energy distribution of fission fragments, 10:45669 (RA;XA)
FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Computer Codes
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. GASPROB code documentation, 10:43915 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Consequence assessments (GASPROB code), 10:43916 (R;CA)
Reaction Kinetics
Kinetics of iodine and cesium reactions in the CANDU reactor primary heat transport system under accident conditions, 10:44244 (R;CA)
Temperature Dependence
Fission gas releases during post irradiation annealing of UO_2 up to 1750°C, 10:44303 (RA;US)
FISSION PRODUCTS
Nuclear Data Collections
Progress in fission product nuclear data. Information about activities in the field of measurements and compilations/evaluations of fission product nuclear data (FPND), 10:45572 (R;XA)
Uptake
Analytic of elements for the determination of soil->plant transfer factors, 10:44748 (R;DE;In German)
FISSION YIELD
After-Heat
Integral experiments for fission-product yield data, 10:45673 (RA;JP;In Japanese)
FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT
FLAME SPECTROMETRY
See EMISSION SPECTROSCOPY
FLAMES
Combustion Kinetics
Research into a spectral flame analyzer. Phase 1. Final report, April 21, 1983-June 30, 1985, 10:44850 (R;US)
Temperature Gradients
Structure of the temperature field in a cold turbulent flame, 10:44851 (R;FR;In French)

Temperature Measurement
Ignition and combustion of utility grind coal-water slurry in a lean, confined, turbulent diffusion flame, 10:43704 (R;US)
Turbulence
Structure of the temperature field in a cold turbulent flame, 10:44851 (R;FR;In French)

FLARING
Environmental Impacts
Estimating the air quality impacts of flare operations, 10:45081 (R;US)

FLASKS
See CASKS

FLAT PLATE COLLECTORS
Heat Transfer
Dynamic behaviour of flat-plate solar collectors, 10:44089 (R;FR;In French)
Performance
Development of flat-plate solar collector-evaporator. Report for 11 January 1980-31 March 1981, 10:44094 (R;IL)

FLAVONES
Excited States
Proton-transfer spectroscopy of 3-hydroxychromones. Extreme sensitivity to hydrogen-bonding perturbations, 10:45406 (J;US)
Luminescence
Proton-transfer spectroscopy of 3-hydroxychromones. Extreme sensitivity to hydrogen-bonding perturbations, 10:45406 (J;US)

FLAVOR MODEL
Kaon-Nucleon Interactions
P-wave K^+N scattering, 10:45495 (RA;DE)
Symmetry Breaking
Fermion mass hierarchy as a consequence of the spontaneous breakdown of the four-flavor symmetry, 10:45539 (J;US)

FLORIDA
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
Refuse-Fueled Power Plants
Rehabilitating the Tampa municipal incinerator to a refuse-to-energy facility, 10:43948 (RA;US)

FLOW CYTOMETERS
See CELL FLOW SYSTEMS

FLOW MODELS
Real-time fluid flow model for control of solidification, 10:43811 (R;US)

FLOWMETERS
Electrical Insulation
Thermal-shock-resistant cermet insulators, 10:44409 (R;US)
Performance Testing
Two-phase flow measurements with advanced instrumented spool pieces, 10:44379 (R;US)
Valves
Flow metering valve, 10:45049 (P;US)

FLUE GAS
Chemical Analysis
Evaluation of a Modified Method 6 flue gas sampling procedure, 10:45108 (RA;US)
Denitrification
Development of a combined NO/sub x/SO_2 removal system based on ZnO scrubbing technology. Fourteenth monthly technical progress report, July 1-July 31, 1985, 10:43655 (R;US)
Use of immobilized iron chelate catalysts for the combined removal of NO/sub x/ and SO/sub x/ from combustion flue gases. Final technical report, August 15, 1984-May 14, 1985, 10:43656 (R;US)
Desulfurization
Adipic acid enhanced flue gas desulfurization process for industrial boilers. Volume 2. Technical assessment. Project summary, 10:43664 (R;US)
Adipic acid enhanced flue gas desulfurization process for industrial boilers: Volume 1. Field test results. Project summary, 10:43665 (R;US)
Continuous testing of the Resox process. Final report, 10:43658 (R;US)
Continuous emission monitoring for industrial boilers, General Motors Corporation, Assembly Division, St. Louis, Missouri. Volume I. System configuration and results of the operational test period. Final report, 10:43660 (R;US)
Development of a combined NO/sub x/SO_2 removal system based on ZnO scrubbing technology. Fourteenth monthly technical progress report, July 1-July 31, 1985, 10:43655 (R;US)
Pilot study of Flakt-Boliden desulfurization process. Final report, 10:43659 (R;US)
Seed regeneration processes for coal fired MHD power plants, 10:44509 (R;US)
Use of immobilized iron chelate catalysts for the combined removal of NO/sub x/ and SO/sub x/ from combustion flue gases. Final technical report, August 15, 1984-May 14, 1985, 10:43656 (R;US)
Heat Recovery
High-temperature ceramic recuperator and combustion air burner programs. Final report, April 1981-October 1983, 10:44920 (R;US)
Hydrochloric Acid
Corrosion of heat exchanger tubes by flue gases containing HCl produced during the incineration of refuse, 10:44918 (TJ;GB)
Sampling
Evaluation of a Modified Method 6 flue gas sampling procedure, 10:45108 (RA;US)

FLUIDIZED BED BOILERS
Commercialization
Pressurized fluidized-bed combustion power plants: proceedings, 10:43703 (R;US)
Design
Pressurized fluidized-bed combustion power plants: proceedings, 10:43703 (R;US)
Fuel Substitution
Alternative fuel firing in an atmospheric fluidized-bed combustion boiler. Final report, 10:43953 (R;US)
Fuels
Alternative fuel firing in an atmospheric fluidized-bed combustion boiler. Final report, 10:43953 (R;US)
Risk Assessment
Pressurized fluidized-bed combustion power plants: proceedings, 10:43703 (R;US)
Turbochargers
Pressurized fluidized-bed combustion power plants: proceedings, 10:43703 (R;US)

FLUIDIZED-BED COMBUSTION
Technology Assessment
Development of atmospheric fluidized bed combustion (FBC) boiler technology for power generation in Japan, 10:43694 (RA;CA)

FLUIDS
Not for BODY FLUIDS.
See also GASES
GEOTHERMAL FLUIDS
LIQUIDS
WORKING FLUIDS
Dispersion Relations
S(k,omega) and the eigenmodes of classical fluids, 10:45407 (RA;US)
Eigenfunctions
S(k,omega) and the eigenmodes of classical fluids, 10:45407 (RA;US)

FLUORANTHENE
See CONDENSED AROMATICS

FLUORESCENCE SPECTROSCOPY
Computerized Simulation
NBSGSC - a FORTRAN program for quantitative x-ray fluorescence analysis. Technical note (final), 10:44755 (R;US)
Image Processing
DNA-based human karyotype, 10:45198 (J;US)
Laser Radiation
Laser excited atomic fluorescence spectrometry as a tool for chemical analysis, 10:44769 (D;US)

FLUORIMETRY
See FLUORESCENCE SPECTROSCOPY

FLUORINE
Neutron Reactions
Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University, 10:45604 (RA;JP;In Japanese)
Self-Diffusion
Diffusion phenomena of fluorine and cations in molten Li_2BeF_4, $LiBeF_3$ and $NaBeF_3$, 10:44780 (R;JP)
FLUORINE CHLORIDES
See CHLORINE FLUORIDES
FLUORINE FLUORIDES
See FLUORINE
FLUTE INSTABILITY
Modifications
Ponderomotive and sideband coupling effects of ion-cyclotron heating on interchange stability, 10:45790 (J;US)
FLUX (NEUTRON)
See NEUTRON FLUX
FLY ASH
Chemical Composition
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Compression Strength
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Mineralogy
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Pelletizing
Potential for disposal of plant waste agglomerates in spreader stoker boilers, 10:43949 (RA;US)
Shrinkage
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
Sintering
Fundamental studies of the mechanisms of slag deposit formation, 10:43700 (R;US)
FOLIAGE
See LEAVES
FOOD CHAINS
Radionuclide Migration
Experimental study of the time dependence of uptake from soil of ^{137}Cs, ^{106}Ru, ^{144}Ce and ^{99}Tc into green vegetables, wheat and potatoes, 10:45142 (R;GB)
FOOD IRRADIATION
See FOOD PROCESSING
FOOD PROCESSING
Boilers
Improved boiler control in food factories. Final report, 10:44567 (R;XE)
FORESTS
Management
Case history of biomass harvesting, 10:43988 (RA;US)
Forest management and marketing cooperative: are they a viable alternative?, 10:43991 (RA;US)
Kubota - Igland system, 10:43989 (RA;US)
Potential biological productivity of wood lots and suggested management practices, 10:43984 (RA;US)
Wildlife and other multiple use considerations, 10:43990 (RA;US)
Mineral Cycling
Effects of atmospheric deposition on forest nutrient cycles, 10:45139 (J;US)
Productivity
Sludge application program at the Savannah River Plant, 10:45150 (R;US)
FORM FACTORS
See also ELECTROMAGNETIC FORM FACTORS
Asymptotic Solutions
Infrared regularization dependence of the asymptotic behavior of the Sudakov form factor in QCD, 10:45515 (R;DE)
FORMIC ACID
Equations of State
Theoretical equations of state for the detonation products of explosives, 10:45059 (R;US)
FORSMARK-1 REACTOR
Oesthammar, Uppsala, Sweden
Fuel Rods
Load follow operation of the Forsmark 1 and 2 BWRs, 10:44200 (RA;US)
Load Management
Load follow operation of the Forsmark 1 and 2 BWRs, 10:44200 (RA;US)
FORSMARK-2 REACTOR
Oesthammar, Uppsala, Sweden
Fuel Rods
Load follow operation of the Forsmark 1 and 2 BWRs, 10:44200 (RA;US)
Load Management
Load follow operation of the Forsmark 1 and 2 BWRs, 10:44200 (RA;US)
FORT CALHOUN-1 REACTOR
See CALHOUN-1 REACTOR
FOSSIL-FUEL POWER PLANTS
Boilers
Feedwater heater procurement guidelines. Final report, 10:44163 (R;US)
Seminar on dissimilar welds in fossil-fired boilers: proceedings, 10:44161 (R;US)
Combustion Products
Assessment of the long-term precision of continuous-emission monitors, 10:45102 (R;US)
Temporal and spatial variability of the visual effects of stack plumes. Final report, 1 February 1983-1 January 1984, 10:45101 (R;US)
Trends in sulfur dioxide emissions from the electric-utility industry and ambient sulfur dioxide concentrations in the northeastern United States, 1975-1982, 10:44175 (R;US)
Environmental Engineering
Design of bituminous-coal-fired power plant consisting of environment-protecting components, 10:44168 (R;DE;In German)
Environmental Impacts
Aerial photography and ground verification at power plant sites: Wisconsin power plant impact study, 10:44174 (R;US)
Air pollution in the vicinity of large thermal power plants and control, 10:43670 (R;US)
Fuel Substitution
Fuel choice in steam electric generation: historical overview, 10:44501 (R;US)
Outages
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Power Generation
Economy of scale, 10:45831 (R;US)
Pumps
Suction effects on feedpump performance: a literature survey, 10:44164 (R;US)
Stack Disposal
Fluid-modeling demonstration of good-engineering-practice stack height in complex terrain, 10:44176 (R;US)
Measurement of stack-gas concentrations in the infrared region of the spectrum, 10:45099 (R;FI)
Steam Turbines
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Superheaters
Seminar on dissimilar welds in fossil-fired boilers: proceedings, 10:44161 (R;US)
FOURIER TRANSFORM SPECTROMETERS
Efficiency
Ultimate limits of FT-IR, 10:45047 (R;US)
FRAGMENTATION
Dynamics
Random fracture nucleation and interaction in one dimension, 10:45308 (R;US)
Fracture Mechanics
Random fracture nucleation and interaction in one dimension, 10:45308 (R;US)

FRAGMENTS (FALLOUT)
See FALLOUT
FRAGMENTS (FISSION)

FRANCE
Coal Mining
1982 progress report for Charbonnages de France, 10:43705 (R;FR;In French)
Houilleres de France Annual statistics 1983, 10:43681 (R;FR;In French)
Geothermal Exploration
Exploration of high energy geothermal sources in the region of Cezallier (Massif Central, France). Magnetotelluric report, 10:44127 (R;FR;In French)
Exploration of high energy geothermal sources in the region of Cezallier (Massif Central, France): gravimetric report, 10:44128 (R;FR;In French)
Exploration of high energy geothermal sources in the region of Cezallier (Massif Central, France). Study of the gases in the soils, 10:44129 (R;FR;In French)
Exploration of high energy geothermal sources in the region of Cezallier (Massif Central, France): concluding report, 10:44130 (R;FR;In French)
Further diagraphies on the Aulnay-sous-Bois (GAY 4) drilling for the exploration of the Albian, Neo-comian and Lusitanian aquiferous strata, 10:44118 (R;FR;In French)
Geothermal Fields
Reciprocal influence analysis of the geothermal energy exploitation in the Sarcelles (France) region, 10:44108 (R;FR;In French)
Geothermal Resources
Geothermal resources of medium temperature. Study of type regions, 10:44113 (R;FR;In French)
Radioactivity
2. Quaterly progress report 1984. [Radiation protection research program], 10:45129 (R;FR;In French)
Monthly results of measurements, April 1984, 10:45126 (R;FR;In French)
Monthly results of measurements, May 1984, 10:45127 (R;FR;In French)
Monthly results of measurements, June 1984, 10:45128 (R;FR;In French)
Monthly results of measurements, July 1984, 10:45179 (R;FR;In French)
Solar-Assisted Heat Pumps
Market potential for solar assisted ground coupled heat pumps, 10:44056 (RA;XE)
FREE ELECTRON LASERS
Beam Dynamics
Collective effects and lattice implications for an FEL bypass ring, 10:45003 (R;US)
Computerized Simulation
Wiggle plane focusing in linear wigglers, 10:44882 (J;US)
Design
Long-base free electron laser resonant cavity, 10:44878 (R;US)
Small-period electromagnet wigglers for free-electron lasers, 10:44881 (J;US)
Electromagnets
Small-period electromagnet wigglers for free-electron lasers, 10:44881 (J;US)
Focusing
Wiggle plane focusing in linear wigglers, 10:44882 (J;US)
Laser Radiation
Micro-temporal and spectral structure of storage ring free electron lasers, 10:44995 (R;FR;In French and English)
Magnet Pole Pieces
Wiggle plane focusing in linear wigglers, 10:44882 (J;US)
Magnetic Field Configurations
Small-period electromagnet wigglers for free-electron lasers, 10:44881 (J;US)
Performance
Wiggle plane focusing in linear wigglers, 10:44882 (J;US)
Storage Rings
Collective effects and lattice implications for an FEL bypass ring, 10:45003 (R;US)
Testing
Long-base free electron laser resonant cavity, 10:44878 (R;US)
Wiggler Magnets
Free electron laser on the ACO storage ring, 10:44928 (R;FR;In French)
FREE RADICALS
See RADICALS
FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
FRETTING CORROSION
Computer Codes
Computer-aided tube fretting-wear predictions (VIBIC code), 10:44892 (R;CA)
Computerized Simulation
Computer-aided tube fretting-wear predictions (VIBIC code), 10:44892 (R;CA)
FRICTION (INTERNAL)
See INTERNAL FRICTION
FRUITS
Limited to edible matured plant ovaries and accessory structures.
Low Dose Irradiation
Experience in operating pilot irradiation facility for treating fruits to satisfy quarantine regulations, 10:45226 (RA;XA)
Possible inspection and control of fruits treated by irradiation to overcome quarantine restrictions, 10:45223 (RA;XA)
Status of quarantine treatment of fruits in Australia with special reference to possible application of irradiation, 10:45224 (RA;XA)
Quarantine
Experience in operating pilot irradiation facility for treating fruits to satisfy quarantine regulations, 10:45226 (RA;XA)
Export of tropical fruit from Thailand with special reference to quarantine restrictions imposed by certain importing countries, 10:45225 (RA;XA)
Possible inspection and control of fruits treated by irradiation to overcome quarantine restrictions, 10:45223 (RA;XA)
Present status of research on efficacy of quarantine treatment for horticultural crops in the USA with special reference to the use of irradiation as a potential quarantine treatment, 10:45222 (RA;XA)
Status of quarantine treatment of fruits in Australia with special reference to possible application of irradiation, 10:45224 (RA;XA)
Summary report on the use of irradiation as a quarantine treatment of agricultural commodities, 10:45221 (RA;XA)
Radiodisinfestation
Experience in operating pilot irradiation facility for treating fruits to satisfy quarantine regulations, 10:45226 (RA;XA)
Export of tropical fruit from Thailand with special reference to quarantine restrictions imposed by certain importing countries, 10:45225 (RA;XA)
Possible inspection and control of fruits treated by irradiation to overcome quarantine restrictions, 10:45223 (RA;XA)
Present status of research on efficacy of quarantine treatment for horticultural crops in the USA with special reference to the use of irradiation as a potential quarantine treatment, 10:45222 (RA;XA)
Status of quarantine treatment of fruits in Australia with special reference to possible application of irradiation, 10:45224 (RA;XA)
Summary report on the use of irradiation as a quarantine treatment of agricultural commodities, 10:45221 (RA;XA)
Radurization
Summary report on the use of irradiation as a quarantine treatment of agricultural commodities, 10:45221 (RA;XA)
FUEL ASSEMBLIES
See also FUEL ELEMENT CLUSTERS
Burnup
Extended Burnup Demonstration Reactor Fuels Program. Annual progress report, April 1983-March 1984 (BWR), 10:44187 (R;US)
Comparative Evaluations
Comparison of advanced BWR fuel designs to current standard designs, 10:44209 (RA;US)

Corrosion Products
Review of the relation of coolant chemistry to crud deposition on light water reactor fuel, 10:44193 (RA;US)
Design
Comparison of advanced BWR fuel designs to current standard designs, 10:44209 (RA;US)
Design and operational behavior of SVEA water cross BWR fuel, 10:44206 (RA;US)
Design and demonstration of the Fragema advanced fuel assembly (AFA), 10:44228 (RA;US)
Development of BWR 9 x 9 fuel assemblies and general trends in advanced design of LWR reload fuel, 10:44205 (RA;US)
Fuel-Cladding Interactions
Large scale demonstration of barrier fuel, 10:44207 (RA;US)
Performance
Demonstration of the VANTAGE 5 fuel design, 10:44229 (RA;US)
Design and operational behavior of SVEA water cross BWR fuel, 10:44206 (RA;US)
Design and demonstration of the Fragema advanced fuel assembly (AFA), 10:44228 (RA;US)
Performance experience of the ASEA-ATOM BWR fuel, 10:44194 (RA;US)
Performance of Exxon Nuclear Company fuel in light water reactors, 10:44198 (RA;US)
Performance Testing
Multirod Burst Test Program. Progress report, January-June 1981. Volume 1, 10:44410 (R;US)

FUEL BUNDLES
See FUEL ELEMENT CLUSTERS

FUEL CANS
Corrosion
Corrosion and hydriding of Zircaloy fuel rod cladding in 633K water and reactor environments, 10:44189 (RA;US)
In-reactor corrosion and crud deposition data on Fragema fuel, 10:44190 (RA;US)
Nuclear fuel cladding localized corrosion, 10:44191 (RA;US)
Relation between autoclave tests and in-reactor corrosion measurement results for Zircaloy, 10:44192 (RA;US)
Spent fuel cladding corrosion under tuff repository conditions: initial observations, 10:44644 (R;US)
Crack Propagation
Investigations of crack initiation during environmentally induced cracking of the Zircaloys, 10:44335 (R;CA)
Deformation
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Multirod Burst Test Program. Progress report, July-December 1980, 10:44395 (R;US)
Embrittlement
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Encapsulation
Advanced immobilization processes for fuel hulls and dissolver residues, 10:43830 (R;FR)
Fracture Properties
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
Hydridation
Corrosion and hydriding of Zircaloy fuel rod cladding in 633K water and reactor environments, 10:44189 (RA;US)
Motion
Analysis of clad motion phenomena; application of the CMOT-II-code to clad melting experiments, 10:44362 (R;DE;In German)
Oxidation
Behavior of the Zircaloy cladding tube in a mixed gas of hydrogen and steam, 10:44440 (TG;US)
Effect of oxygen on the failure of reactor fuel sheaths during a postulated loss-of-coolant accident (BURST-3 model), 10:44334 (R;CA)
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Physical Radiation Effects
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
Radioactive Waste Processing
Advanced immobilization processes for fuel hulls and dissolver residues, 10:43830 (R;FR)
Reactor Safety Experiments
Temperature escalation in PWR fuel rod simulators due to the zircaloy/steam reaction ESSI-4 ESSI-11, 10:44360 (R;DE)
Ruptures
Effect of oxygen on the failure of reactor fuel sheaths during a postulated loss-of-coolant accident (BURST-3 model), 10:44334 (R;CA)
Strains
Study of the effect of circumferential temperature variations on fuel-sheath strain in an inert atmosphere, 10:44300 (R;CA)
Stress Corrosion
Spent fuel cladding corrosion under tuff repository conditions: initial observations, 10:44644 (R;US)
Thermal Stresses
Temperature escalation in PWR fuel rod simulators due to the zircaloy/steam reaction ESSI-4 ESSI-11, 10:44360 (R;DE)

FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Molten Carbonate Fuel Cells
Evaluation of natural-gas molten-carbonate power plants. Final technical report, January 11, 1982-October 31, 1984, 10:44518 (R;US)
Parametric Analysis
Parameteric analysis of a 6500-Btu/kWh heat rate dispersed generator. Final report, 10:44517 (R;US)
Performance
Parameteric analysis of a 6500-Btu/kWh heat rate dispersed generator. Final report, 10:44517 (R;US)

FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE

FUEL CYCLE
Bibliographies
Nuclear Fuel Cycle: a current awareness bulletin, 10:45930 (J;US)
Comparative Evaluations
Plutonium and U-233 mines, 10:43814 (R;CA)

FUEL ELEMENT CLUSTERS
Criticality
Validation of three cross-section libraries used with the SCALE system for criticality safety analysis, 10:44306 (R;US)
Fluid Flow
Experimental investigations on the fluid flow through an asymmetric rod bundle (P/D = 1.148, W/D = 1.074), 10:44304 (R;DE;In German)
Heat Transfer
Conceptual design basis and temperature predictions in a simulated instrumented LMFBR blanket subassembly, 10:44256 (R;US)
ORMDIN: a finite element program for two-dimensional nonlinear inverse heat conduction analysis, 10:44386 (R;US)
Simulation of a BWR fuel bundle under small break conditions, 10:44340 (R;US)
Hydraulics
Conceptual design basis and temperature predictions in a simulated instrumented LMFBR blanket subassembly, 10:44256 (R;US)
Hydrodynamics
Simulation of a BWR fuel bundle under small break conditions, 10:44340 (R;US)
Performance Testing
Multirod Burst Test Program. Progress report, January-June 1981. Volume 1, 10:44410 (R;US)
Temperature Distribution
Measurements of local temperature distributions in rod bundles with sodium flow, 10:44270 (R;DE;In German)

FUEL ELEMENT FAILURE
Effect of oxygen on the failure of reactor fuel sheaths during a postulated loss-of-coolant accident, 10:44334 (R;CA)

Fission Product Release
Purposely defected UO_2-Zircaloy fuel elements irradiated in pressurized light water at linear powers of 55 kW/m, 10:44333 (R;CA)

FUEL ELEMENTS
See also FUEL PINS
FUEL PLATES
FUEL RODS
SPENT FUEL ELEMENTS
Fission Product Release
Release of short-lived fission products from operating UO_2 fuel under oxidizing conditions, 10:44302 (R;CA)
Transient fission product release within operating UO_2 fuel elements during power cycles, 10:44301 (R;CA)
Heat Transfer
Lumped-parameter models for transient conduction in nuclear reactor components, 10:44380 (R;US)
Molding
Warm-moulded graphitic matrix for spherical HTR fuel elements, 10:44240 (RA;DE)
Oxidation
Release of short-lived fission products from operating UO_2 fuel under oxidizing conditions, 10:44302 (R;CA)

FUEL FABRICATION PLANTS
Data Covariances
Evaluation of uncertainties in MUF for a LWR fuel fabrication plant. Pt.2 - Pt.4, 10:44307 (R;SE)
Decontamination
Behavior and mechanism of sorption of uranylperoxocarbonato-complexes on anion exchanger systems, 10:44845 (R;DE;In German)
Material Unaccounted For
Evaluation of uncertainties in MUF for a LWR fuel fabrication plant. Pt.2 - Pt.4, 10:44307 (R;SE)

FUEL FEEDING SYSTEMS
Test Facilities
Coal water mixture development. Quarterly technical progress report, 10:43689 (R;US)
Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)
Coal water mixture development. Quarterly technical progress report, 10:43698 (R;US)

FUEL GAS
See also NATURAL GAS
Chemical Composition
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1984, 10:44516 (R;US)

FUEL INJECTION SYSTEMS
Testing
Development of new combustor technologies for future alternative aero-engine fuels - phase 1, 10:44555 (R;DE;In German)

FUEL OILS
See also HEATING OILS
RESIDUAL FUELS
Data Compilation
Petroleum Supply Monthly, June 1985, 10:43727 (R;US)
Sales
Petroleum Marketing Monthly, 10:43728 (R;US)
Toxicity
EDS coal liquefaction process development, Phase V. Quarterly technical progress report, January 1-March 31, 1985, 10:43621 (R;US)

FUEL PELLETS
Comparative Evaluations
Ramp tests on fuel rods containing solid pellet, annular pellet, and Sphere-Pac particle fuel, 10:44204 (RA;US)

FUEL PENCILS
See FUEL PINS

FUEL PINS
Simulators
Thermocouple signal sensitivity to the sheath thickness of thermal-hydraulic test facility indirectly heated electric fuel pin simulators, 10:44376 (R;US)

FUEL PLATES
Swelling
Postirradiation analysis of experimental uranium-silicide dispersion fuel plates, 10:44185 (R;US)

FUEL POOLS
IAEA Safeguards
Design and performance evaluation of the ultrasonic random coil identity-integrity element for underwater safeguards seals, 10:43900 (R;CA)
Security Seals
Design and performance evaluation of the ultrasonic random coil identity-integrity element for underwater safeguards seals, 10:43900 (R;CA)

FUEL REPROCESSING
See REPROCESSING

FUEL REPROCESSING PLANTS
Air Cleaning Systems
NO/sub x/ removal from nuclear fuel reprocessing plants off gas by catalytic reduction with NH_3, 10:43851 (RA;US)
Research and development on air cleaning system of reprocessing plant in Japan, 10:43840 (RA;US)
Gaseous Wastes
Development of a method to determine iodine specific activity in process off-gases by GC separation and negative ionization mass spectrometry, 10:43852 (RA;US)
Off-Gas Systems
Alternative modes for cryogenic krypton removal, 10:43846 (RA;US)
Behavior of impurities in a cryogenic krypton removal system, 10:43847 (RA;US)
Calculating released amounts of aerosols, 10:43845 (RA;US)
Chromatographic separation of krypton from dissolver off-gas at low temperatures, 10:43849 (RA;US)
Continuous chemical cold traps for reprocessing off-gas purification, 10:43836 (RA;US)
Experience of iodine removal in Tokai reprocessing plant, 10:43834 (RA;US)
Iodine-129 process control monitor for evaporator off-gas streams, 10:43835 (RA;US)
Krypton control alternatives, 10:43850 (RA;US)
Removal of iodine from off-gas of nuclear fuel reprocessing plants with silver impregnated adsorbents, 10:43853 (RA;US)
Research and development on air cleaning system of reprocessing plant in Japan, 10:43840 (RA;US)
Selected operating results of the PASSAT prototype dissolver offgas cleaning system, 10:43831 (RA;US)
Selective absorption of noble gases in freon-12 at low temperatures and atmospheric pressure, 10:43848 (RA;US)
Test results from the GA Technologies engineering-scale off-gas treatment system, 10:43833 (RA;US)
Treatment of the off-gas stream from the HTR reprocessing head-end, 10:43832 (RA;US)
Radioactive Effluents
Predictions of local, regional and global radiation doses from iodine-129 for four different disposal methods and an all-nuclear future, 10:43894 (RA;US)
Radioactive Waste Management
Development of technologies for the waste management of I-129, Kr-85, C-14 and tritium in the Fed. Rep. of Germany, 10:43842 (RA;US)
Status of R and D in the field of nuclear airborne waste sponsored by the European Community, 10:43841 (RA;US)
Summary of US activities in commercial nuclear airborne waste management, 10:43839 (RA;US)
Radioactive Waste Processing
Choice of materials for the immobilization of 85-krypton in a metallic matrix by combined ion implantation and sputtering, 10:43838 (RA;US)
Development of the ELEX process for tritium separation at reprocessing plants, 10:43837 (RA;US)
Technology Assessment
Advancements in reprocessing technology. Keynote address for the 18th DOE airborne waste management and air cleaning conference, 10:43819 (RA;US)

FUEL RODS
Burnable Poisons
Materials development and irradiation testing of a boride integral fuel burnable absorber, 10:44222 (RA;US)
Performance of Exxon Nuclear gadolinia-bearing fuel in pressurized water reactors, 10:44224 (RA;US)

Burnup
Evaluation of high burnup fission gas release data, 10:44220 (RA;US)
Fission gas release from PWR fuel rods at extended burnups, 10:44218 (RA;US)
Fission gas release of PWR fuel under steady and transient conditions up to high burnup, 10:44219 (RA;US)
Fission gas releases during post irradiation annealing of UO_2 up to 1750°C, 10:44303 (RA;US)
Mechanisms of fission gas release from different types of fuel rods during normal operation: results and analysis of CONTACT experiments, 10:44221 (RA;US)
Quad Cities extended burnup fuel performance, 10:44199 (RA;US)
Ramp test behavior of high burnup PWR fuel rods, 10:44226 (RA;US)
Release and migration of fission products in high burnup fuel, 10:44217 (RA;US)
Deformation
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Fission Product Release
Evaluation of high burnup fission gas release data, 10:44220 (RA;US)
Fission gas release from PWR fuel rods at extended burnups, 10:44218 (RA;US)
Fission gas release of PWR fuel under steady and transient conditions up to high burnup, 10:44219 (RA;US)
Fission gas releases during post irradiation annealing of UO_2 up to 1750°C, 10:44303 (RA;US)
Fission product release from BWR fuel under LOCA conditions, 10:44388 (R;US)
Fuel behavior, fission product release and cladding deformation during the CANSAR, PCI-related experiment, 10:44227 (RA;US)
Light-water-reactor safety research program. Quarterly progress report, January-March 1980, 10:44384 (R;US)
Mechanisms of fission gas release from different types of fuel rods during normal operation: results and analysis of CONTACT experiments, 10:44221 (RA;US)
Release and migration of fission products in high burnup fuel, 10:44217 (RA;US)
Fuel-Cladding Interactions
Fuel behavior, fission product release and cladding deformation during the CANSAR, PCI-related experiment, 10:44227 (RA;US)
Multiple ramp tests of zirconium liner fuel, 10:44208 (RA;US)
Gadolinium Oxides
Analysis of thermomechanical behavior of UO_2 Gd_2O_3 fuel under irradiation conditions, 10:44225 (RA;US)
Heat Transfer
Blowdown Heat Transfer Separate-Effects Program. Quarterly progress report, October-December 1980, 10:44401 (R;US)
Hydraulics
Blowdown Heat Transfer Separate-Effects Program. Quarterly progress report, October-December 1980, 10:44401 (R;US)
Liners
Multiple ramp tests of zirconium liner fuel, 10:44208 (RA;US)
Performance
Analysis of thermomechanical behavior of UO_2 Gd_2O_3 fuel under irradiation conditions, 10:44225 (RA;US)
BWR fuel performance and its development in Japan, 10:44196 (RA;US)
Fuel behavior, fission product release and cladding deformation during the CANSAR, PCI-related experiment, 10:44227 (RA;US)
Fuel performance evaluation and improved fuel utilization by pool-site fuel services, 10:44197 (RA;US)
Independent assessment of the steady state fuel rod analysis code FRAPCON-1, 10:44305 (R;US)
International super-ramp project at Studsvik, 10:44203 (RA;US)
Load follow operation of the Forsmark 1 and 2 BWRs, 10:44200 (RA;US)
Quad Cities extended burnup fuel performance, 10:44199 (RA;US)
Ramp test behavior of high burnup PWR fuel rods, 10:44226 (RA;US)
Ramp tests on fuel rods containing solid pellet, annular pellet, and Sphere-Pac particle fuel, 10:44204 (RA;US)
Trends in BWR fuel performance, 10:44195 (RA;US)
Performance Testing
Light-water-reactor safety research program. Quarterly progress report, January-March 1980, 10:44384 (R;US)

FUEL SHEATHS
See FUEL CANS

FUEL SLUGS

FUEL SLURRIES
Atomization
Fundamental combustion studies of low-rank coal slurries. Quarterly technical progress report No. 5, March 1, 1985-May 31, 1985, 10:43697 (R;US)
Injection, atomization, ignition, and combustion of liquid fuels in high-speed air streams. Annual scientific report, 1 December 1982-30 November 1983, 10:44849 (R;US)
Calorific Value
Ignition and combustion of utility grind coal-water slurry in a lean, confined, turbulent diffusion flame, 10:43704 (R;US)
Combustion
Fundamental combustion studies of low-rank coal slurries. Quarterly technical progress report No. 5, March 1, 1985-May 31, 1985, 10:43697 (R;US)
Ignition and combustion of utility grind coal-water slurry in a lean, confined, turbulent diffusion flame, 10:43704 (R;US)
Injection, atomization, ignition, and combustion of liquid fuels in high-speed air streams. Annual scientific report, 1 December 1982-30 November 1983, 10:44849 (R;US)
Combustion Properties
Feasibility testing of micronized coal: oil (MICO) fuel in a model gas turbine combustor, 10:43696 (R;US)
Density
Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)
Fuel Feeding Systems
Coal water mixture development. Quarterly technical progress report, 10:43698 (R;US)
Gelation
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Hydraulic Transport
Report on solids transport workshop, 10:43688 (R;US)
Ignition
Ignition and combustion of utility grind coal-water slurry in a lean, confined, turbulent diffusion flame, 10:43704 (R;US)
Rheology
Fundamental combustion studies of low-rank coal slurries. Quarterly technical progress report No. 5, March 1, 1985-May 31, 1985, 10:43697 (R;US)
Shear Properties
Coal water mixture development. Quarterly technical progress report, 10:43689 (R;US)
Stability
First workshop on biomass and coal conversion programs of the USAID/GOI Alternative Energy Resources Development Project. Report on trip to India, November 7-19, 1983, 10:43699 (R;US)
Test Facilities
Coal water mixture development. Quarterly technical progress report, 10:43689 (R;US)
Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)
Testing
Coal water mixture development. Quarterly technical progress report, 10:43689 (R;US)
Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)
Viscosity
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Coal water mixture development. Quarterly technical progress report, 10:43689 (R;US)

Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)

FUEL SUBSTITUTION
Economic Impact
Technical/economic impacts and implications of using washed coals at New York State utilities. Final report, 10:43693 (R;US)

FUEL SUSPENSIONS
See FUEL SLURRIES

FUEL-AIR RATIO
Control Systems
Ionic fuel control system conversion to operational configuration. Final report, 10:44572 (R;US)

FUEL-CLADDING INTERACTIONS
Research Programs
Overview of the joint development work on PCI remedy fuel, 10:44202 (RA;US)

FUELS
See also AVIATION FUELS
FUEL SLURRIES
GAS FUELS
JET ENGINE FUELS
LIQUID FUELS
NUCLEAR FUELS
REFUSE DERIVED FUELS
SYNTHETIC FUELS
WOOD FUELS
Marketing
Cooperative petroleum operations. Cooperative information report, 10:43735 (R;US)

FUELS (NUCLEAR)

FUELWOOD
See WOOD FUELS

FUMES
See AEROSOLS

FUNCTIONS
See also RETENTION FUNCTIONS
Integrals
Special function on nonselfdual cones, 10:45771 (R;XA)
Kernels
Special function on nonselfdual cones, 10:45771 (R;XA)

FUNDAMENTAL PARTICLES
See ELEMENTARY PARTICLES

FUNGICIDES
Metabolism
Uptake of and follow-up supply with [benzene ring-U-^{14}C]triademinol via the caryopsis and from dressed zones after seed treatment of winter barley and winter wheat using a dry dressing formula, 10:45212 (R;DE;In German)
Uptake
Uptake of and follow-up supply with [benzene ring-U-^{14}C]triademinol via the caryopsis and from dressed zones after seed treatment of winter barley and winter wheat using a dry dressing formula, 10:45212 (R;DE;In German)

FURANS
Chemical Preparation
Synthesis and antitumor activity of 2-β-D-ribofuranosylselenazole-4-carboxamide and related derivatives, 10:44792 (J;US)

FURNACE OIL
See HEATING OILS

FUSED SALTS
See MOLTEN SALTS

FUSION ENERGY

G

GADOLINIUM
Magnetic Properties
Temperature dependence of the magnetic excitations in Gd, 10:44593 (R;US)

GADOLINIUM 155
Isomer Shift
Moessbauer isomer shift in intermetallic compounds of europium and gadolinium, 10:44607 (R;NL)
Moessbauer Effect
Moessbauer isomer shift in intermetallic compounds of europium and gadolinium, 10:44607 (R;NL)

GADOLINIUM 155 TARGET
Neutron Reactions
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)

GADOLINIUM 157 TARGET
Neutron Reactions
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)

GADOLINIUM ALLOYS
Electronic Structure
Moessbauer isomer shift in intermetallic compounds of europium and gadolinium, 10:44607 (R;NL)

GADOLINIUM OXIDES
Physical Radiation Effects
Influence of high energetic irradiations with heavy ions on the magnetic properties of ferrimagnetic iron granates, 10:44667 (R;DE;In German)

GADOLINIUM PHOSPHATES
Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
Raman Spectroscopy
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
X-Ray Diffraction
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

GAGES (STRAIN)
See STRAIN GAGES

GALAXIES
See also MILKY WAY
SEYFERT GALAXIES
Synthesis
Cooling pancakes, 10:45340 (J;GB)

GALAXY CLUSTERS
Chemical Composition
Some clues for the iron origin in galaxy clusters, 10:45324 (R;FR)

GALLIUM 68
Collective Model
Competition between collective and single particle excitations in nuclear structure description, 10:45623 (R;RO;In Romanian)

GALLIUM ARSENIDE SOLAR CELLS
Electrical Properties
Contribution to the preparation of high efficiency gallium arsenide solar cells by vapour phase epitaxy with organometallic compounds, 10:44001 (R;FR;In French)
Fabrication
Contribution to the preparation of high efficiency gallium arsenide solar cells by vapour phase epitaxy with organometallic compounds, 10:44001 (R;FR;In French)
Physical Radiation Effects
Contribution to the study of irradiation defects induced in n-type GaAs (Electrons), 10:44000 (R;FR;In French)

GALLIUM ARSENIDES
Photoluminescence
Lasing transitions in GaAs/GaAs/sub 1-x/P/sub x/ strained-layer superlattices with x = 0.1—0.5, 10:44880 (J;US)
Physical Radiation Effects
Effect of hydrostatic pressure on defect annealing in semiconductors (Gamma irradiated), 10:44718 (R;US)

Polarons
One dimensional polaron effects and current inhomogeneities in sequential phonon emission, 10:44722 (R;US)
Stimulated Emission
Lasing transitions in GaAs/GaAs/sub 1-x/P/sub x/ strained-layer superlattices with x = 0.1—0.5, 10:44880 (J;US)
Tunnel Effect
One dimensional polaron effects and current inhomogeneities in sequential phonon emission, 10:44722 (R;US)

GALLIUM PHOSPHIDES
Photoluminescence
Lasing transitions in GaAs/GaAs/sub 1-x/P/sub x/ strained-layer superlattices with x = 0.1—0.5, 10:44880 (J;US)
Stimulated Emission
Lasing transitions in GaAs/GaAs/sub 1-x/P/sub x/ strained-layer superlattices with x = 0.1—0.5, 10:44880 (J;US)

GAMMA DIFFRACTOMETERS
Remote Control
Computer-guided facility for the study of single crystals at the gamma diffractometer GADI, 10:44900 (R;DE;In German)

GAMMA RADIATION
Evaluation of gamma-ray production cross sections, 10:45578 (RA;JP;In Japanese)

GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS

GAMMA SOURCES
For cosmic sources of gamma radiation use COSMIC GAMMA SOURCES.
Cesium 137
Fission product cesium-137 as a source for irradiators, 10:43919 (R;US)

GAMMA SPECTRA
Data Analysis
Kalman-Filter time-series analysis of gamma-ray data from NaI(Tl) detectors for the ND6620 computer. Final report, 10:45569 (R;US)

GAMMA SPECTROMETERS
Computerized Control Systems
STOAV84, computer program for an automatic gamma spectrometer for activation analysis. Research report, 10:44754 (R;FI)
Sample Changers
Automatic sample changer for gamma spectrometry. Technical report, 10:44752 (R;GB)

GAMMA SPECTROSCOPY
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)
Computer Calculations
Continuum spectra in proton- and neutron-induced reactions, 10:45580 (RA;XA)
Li-Drifted Ge Detectors
Automatic sample changer for gamma spectrometry, 10:45021 (R;GB)
NaI Detectors
Automatic sample changer for gamma spectrometry, 10:45021 (R;GB)

GARDENHOSE INSTABILITY
See HOSE INSTABILITY

GAS ANALYSIS
Infrared Spectra
Measurement of stack-gas concentrations in the infrared region of the spectrum, 10:45099 (R;FI)

GAS APPLIANCES
Technology Assessment
Gas Appliance Technology Center. Annual report, December 1983-November 1984, 10:43752 (R;US)

GAS BURNERS
Control
Pulsating burners - controlling mechanisms and performance. Annual report, December 1, 1983-November 30, 1984, 10:44921 (R;US)

GAS CENTRIFUGES
Safeguards
Measurement of the enrichment of uranium in the pipework of a gas centrifuge enrichment plant, 10:43907 (R;US)

GAS COOLANTS
See GASES

GAS COOLED REACTORS
See also HTGR TYPE REACTORS
Reactor Kinetics
Space and energy dependence of uranium 238 resonance capture rate in a heterogeneous lattice, 10:44283 (R;FR;In French)

GAS ENGINES
See INTERNAL COMBUSTION ENGINES

GAS FLOW
Friction
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)
Velocity
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)
Wall Effects
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)

GAS FUELS
See also FUEL GAS
Synthesis
Limits of thermochemical and photochemical syntheses of gaseous fuels: a finite-time thermodynamic analysis. Annual report, September 1983-February, 1985, 10:43932 (R;US)
Thermodynamics
Limits of thermochemical and photochemical syntheses of gaseous fuels: a finite-time thermodynamic analysis. Annual report, September 1983-February, 1985, 10:43932 (R;US)

GAS SPILLS
Data Acquisition Systems
Data collection strategies for distributed data acquisition systems, 10:43754 (R;US)

GAS TURBINES
See also COAL-FIRED GAS TURBINES
Catalytic Combustors
Critical component technologies for stationary gas turbine catalytic combustors. Final report, 10:43702 (R;US)
Commercialization
Gas turbine systems research and development CWM industrial energy system application study. Third topical report, October 1, 1984-May 31, 1985, 10:44468 (R;US)
Fesibility Studies
Gas turbine systems for operation on coal-derived fuels. Final technical report, 10:44157 (R;US)
Fuels
Gas turbine systems research and development CWM industrial energy system application study. Third topical report, October 1, 1984-May 31, 1985, 10:44468 (R;US)
Turbine Blades
Evaluation of protective coatings for hot components of combustion turbines. Final report, 10:44160 (R;US)

GAS UTILITIES
Emergency Plans
Emergency gas-pipeline policy, 10:43759 (RA;US)

GAS WELLS
See NATURAL GAS WELLS

GASEOUS EFFLUENTS
See GASEOUS WASTES

GASEOUS WASTES

FERMI GAS
FUEL GAS

RARE GASES
Adsorption
Angle dependence of the adsorption- and desorption probabilities of gases, 10:44605 (RA;AT;In German)
Desorption
Angle dependence of the adsorption- and desorption probabilities of gases, 10:44605 (RA;AT;In German)
Equations of State
Numerical calculation of complex shock reflections in gases, 10:45409 (R;US)
Flammability
Determination of limits of flammability of gases and gas mixtures in air, 10:43761 (TG;GB)
Shock Waves
Numerical calculation of complex shock reflections in gases, 10:45409 (R;US)
GASOLINE
Data Compilation
Petroleum Supply Monthly, June 1985, 10:43727 (R;US)
Sales
Petroleum Marketing Monthly, 10:43728 (R;US)
Yields
Conversion of methanol to gasoline. Operation of the demonstration plant. Milestone report, 10:43924 (R;US)
GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES
GAUGE INVARIANCE
Symmetry
Are gauge symmetries symmetries, 10:45528 (R;FR)
GAUGE TRANSFORMATIONS
See GAUGE INVARIANCE
GEESE
Population Dynamics
Impacts of water levels on breeding Canada geese and the methodology for mitigation and enhancement in the Flathead drainage. Annual report, 1984, 10:43966 (R;US)
Productivity
Effects of water levels on productivity of Canada geese in the northern Flathead Valley. Annual report 1984, 10:43970 (R;US)
GE(LI) DETECTORS
See LI-DRIFTED GE DETECTORS
GELS
Electrophoresis
Two-dimensional, computer-controlled film scanner: quantitation of fluorescence from ethidium bromide-stained DNA gels, 10:44814 (J;US)
Fluorescence
Two-dimensional, computer-controlled film scanner: quantitation of fluorescence from ethidium bromide-stained DNA gels, 10:44814 (J;US)
GENERATORS (STEAM)

GIANT STARS
Ultraviolet Spectra
Progress report on the analysis of long exposure SWP high-resolution spectra of cool stars. Final report, 10:45332 (R;US)
GLASS
See also BOROSILICATE GLASS
Chemical Composition
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Corrosion
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Grinding
Precision contour grinding development, 10:44719 (RA;US)
Leaching
Application of ultramicrotome section technique to the characterization of nuclear glass durability, 10:44700 (R;FR;In French)
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Pneumatic Transport
Measurement and control of electrostatic charges on solids in a gaseous suspension. Technical progress report No. 4, 10:43691 (R;US)
GLAUBER THEORY
Conservation Laws
Unitarity and time reversal in the Glauber model, 10:45553 (RA;DE)
GLAZING MATERIALS
Transparent or translucent materials such as glass or glass substitutes.
Performance
Development of radiative cooling materials. Phase III. Final technical report. Volume II, 10:44063 (R;US)
Development of radiative cooling materials: Phase III. Final technical report. Volume I, 10:44062 (R;US)
Research Programs
Development of radiative cooling materials. Phase III. Final technical report. Volume II, 10:44063 (R;US)
Development of radiative cooling materials: Phase III. Final technical report. Volume I, 10:44062 (R;US)

GLUCOSE
Radiolysis
Gamma radiolysis of glucose and relative compounds: a spin-trapping study, 10:44831 (R;FR;In France)
GLUCURONIDE CONJUGATES
Liquid Column Chromatography
Role of metabolism in benzo(a)pyrene carcinogenesis, 10:45262 (R;US)
GLUEBALLS
Particle Production
[Studies of interactions between elementary particles and nuclei]. Progress report, 10:45420 (R;US)
GLUONIUM
See GLUEBALLS
GLUONS
Perturbative QCD beyond "classical" problems, 10:45559 (RA;PL)
Quantum Operators
Gluon condensate from lattice caculations: SU(3) pure gauge theory, 10:45555 (RA;PL)
GLUTATHIONE CONJUGATES
Liquid Column Chromatography
Role of metabolism in benzo(a)pyrene carcinogenesis, 10:45262 (R;US)
GLYCINE HISPIDA
Plant Growth
Estimating the direct effect of CO_2 on soybean yield, 10:45213 (J;US)
Productivity
Comparison of experimental designs used to detect changes in yields of crops exposed to acidic precipitation, 10:45275 (J;US)
Effects of simulated acidic rain on yields of field-grown soybeans, 10:45277 (J;GB)
GOBAR GAS
See METHANE
GOLD
Alpha Reactions
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Extraction
Chemical analyses of geothermal waters and Strategic Petroleum Reserve brines for metals of economic importance, 10:44137 (J;US)
Grain Boundaries
Diffraction and microscopy studies of the structure of grain boundaries in Fe, Fe-base alloys and ceramic materials. Final technical report, 10:44598 (R;US)
Spallation
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
GOLD 197 TARGET
Electron Reactions
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)
Neutron Reactions
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)
Oxygen 16 Reactions
Role of collision terms for nucleon emission in intermediate energy heavy ion reactions, 10:45597 (R;FR)
GRAIN ALCOHOL
See ETHANOL
GRAND UNIFIED THEORY
Composite Models
Excited lepton production at LEP and HERA, 10:45470 (R;DE)
Quark mass matrices in a SUSY composite model, 10:45566 (J;NL)
Fermions
Constraints on a system of two neutral fermions from cosmology, 10:45330 (R;FR)
P Invariance
Oasis in the desert: weakly broken parity in grand unified theories, 10:45556 (RA;PL)
Symmetry Breaking
Oasis in the desert: weakly broken parity in grand unified theories, 10:45556 (RA;PL)
GRANITES
See also PEGMATITES
Hydraulic Conductivity
Field and theoretical investigations of fractured crystalline rock near Oracle, Arizona, 10:45290 (R;US)
Large-scale hydraulic conductivity measurements in fractured granite, 10:43886 (J;US)
GRANULAR MATERIALS
For unspecified materials having a granular texture.
Detonations
Modeling and computation of deflagration-to-detonation transition in reactive granular materials, 10:45056 (R;US)
GRANULITES
Metamorphism
Influence of CO_2 on melting of model granulite facies assemblages: a model for the genesis of charnockites, 10:45315 (J;US)
GRAPHITE
Creep
Carbon 84, 10:44713 (R;DE)
Irradiation induced creep in graphite with respect to the flux effect and the high fluence behaviour, 10:44715 (RA;DE)
Fracture Properties
Fracture toughness of anisotropic graphites, 10:44705 (R;US)
Magnetic Susceptibility
ESR and magnetic susceptibility studies of graphite intercalated with transition metal hexafluorides, 10:44709 (RA;IL)
Molding
Carbon 84, 10:44713 (R;DE)
Warm-moulded graphitic matrix for spherical HTR fuel elements, 10:44240 (RA;DE)
Neutron Transport
Momentum distribution of light atoms by deep inelastic neutron scattering, 10:45730 (RA;US)
Physical Radiation Effects
Carbon 84, 10:44713 (R;DE)
Irradiation induced creep in graphite with respect to the flux effect and the high fluence behaviour, 10:44715 (RA;DE)
Solubility
Equilibrium composition of aerosols generated from sulfuric and nitric acids, water, and ammonia, 10:45096 (R;SE)
Sputtering
Influence of impurities on the high-temperature sputtering yield of graphite, 10:45882 (J;NL)
Thermodynamic Properties
Reaction calorimetry for coal chemistry and catalysis. Final report, August 1, 1982-July 30, 1985 (Heats of immersion), 10:43652 (R;US)
Wall Loading
High power ohmic heating experiments with graphite wall protection in OHTE, 10:45881 (J;NL)
GRAPHITE MODERATED REACTORS
See also HTGR TYPE REACTORS
WINDSCALE PRODUCTION REACTORS
Reactor Kinetics
Space and energy dependence of uranium 238 resonance capture rate in a heterogeneous lattice, 10:44283 (R;FR;In French)
GRAPHITE MODERATOR
See GRAPHITE
GRAVITATIONAL FIELDS
Quantization
Stochastic quantization and gravity, 10:45763 (R;AT)
GRAVITY LOGGING
Uses
Investigation of subsurface structure with borehole gravimetry, 10:43716 (R;US)
GREAT BRITAIN
See UNITED KINGDOM
GREAT LAKES REGION
See FEDERAL REGION V
GREECE
Geothermal Resources
Geothermal resources of medium temperature. Study of type regions, 10:44113 (R;FR;In French)

GREEN RIVER FORMATION
Oil Shale Deposits
High-pressure pyrolysis of Green River oil shale, 10:43765 (J;US)
GREENHOUSES
Energy Conservation
Reduction of energy consumption in horticulture: solar greenhouse and utilization of tepid waters, 10:44564 (R;FR;In French)
GREENLAND
Natural Gas Deposits
Project EASTMAR. Final report, 10:43710 (R;DK)
Petroleum Deposits
Project EASTMAR. Final report, 10:43710 (R;DK)
GROUND DISPOSAL
Environmental Impacts
Sludge application program at the Savannah River Plant, 10:45150 (R;US)
GROUND SOURCE HEAT PUMPS
Coefficient of Performance
Heating of a laboratory hall by means of a soil heat pump combined with unshielded solar absorbers, 10:44563 (R;FR)
Some measurement results on commercial heat pump systems with solar collectors and ground storage, 10:44040 (RA;XE)
Installation
Earth coil/heat pump research at Oklahoma State University, 10:44050 (RA;XE)
Market
Experiences with solar coupled storages with heat pumps for space heating in Austria, 10:44038 (RA;XE)
Market potential for solar assisted ground coupled heat pumps, 10:44056 (RA;XE)
Operation
Central solar heating plants with seasonal storage, 10:44039 (RA;XE)
Experiences with solar coupled storages with heat pumps for space heating in Austria, 10:44038 (RA;XE)
First year operation with a seasonal storage of 80,000 m³ clay, 10:44051 (RA;XE)
Heating of a laboratory hall by means of a soil heat pump combined with unshielded solar collectors, 10:44041 (RA;XE)
Heliogeothermal doublet: application to 224 collective apartments, 10:44045 (RA;XE)
Loft solar collector with heat storage in the ground under a house, 10:44035 (RA;XE)
Performance of a hybrid solar heating system of the solar laboratory at the JRC-Ispra, 10:44048 (RA;XE)
Project Perstorp: a combined surface-soil and solar heating system for a group of detached houses, 10:44034 (RA;XE)
Sigtuna Project and application studies, 10:44052 (RA;XE)
Simplified model for the technic-economic evaluation of a solar system coupled with seasonal energy storage and a heat pump, 10:44049 (RA;XE)
Solar assisted heat pump system and in-ground energy storage in a school building, 10:44053 (RA;XE)
Solar House Obdach: experiences with a solar ground-coupled storage system, 10:44033 (RA;XE)
Some experimental results on coupled systems: air collectors, ground storage, heat pump, 10:44036 (RA;XE)
Storage of solar energy with horizontal pipes in the ground, 10:44037 (RA;XE)
Study of a heating system using a water-water heat pump, solar panels without covers and low temperature heat storage, 10:44046 (RA;XE)
Study on long-term underground heat storage with vertical storage coil, 10:44055 (RA;XE)
Three years experiences from a summer stored earth-heat-pump-system, 10:44054 (RA;XE)
Performance
Central solar heating plants with seasonal storage, 10:44039 (RA;XE)
Heat losses from a ground storage, a study with subroutines from SUNSYST, 10:44043 (RA;XE)
Heating of a laboratory hall by means of a soil heat pump combined with unshielded solar collectors, 10:44041 (RA;XE)
Heliogeothermal doublet: application to 224 collective apartments, 10:44045 (RA;XE)
Loft solar collector with heat storage in the ground under a house, 10:44035 (RA;XE)
Performance of a hybrid solar heating system of the solar laboratory at the JRC-Ispra, 10:44048 (RA;XE)
Project Perstorp: a combined surface-soil and solar heating system for a group of detached houses, 10:44034 (RA;XE)
Selection of optimal ground coupled solar heat pump systems, 10:44042 (RA;XE)
Simplified model for the technic-economic evaluation of a solar system coupled with seasonal energy storage and a heat pump, 10:44049 (RA;XE)
Solar assisted heat pump system and in-ground energy storage in a school building, 10:44053 (RA;XE)
Solar collectors in combination with aquifer and heat pump, 10:44047 (RA;XE)
Solar House Obdach: experiences with a solar ground-coupled storage system, 10:44033 (RA;XE)
Some experimental results on coupled systems: air collectors, ground storage, heat pump, 10:44036 (RA;XE)
Storage of solar energy with horizontal pipes in the ground, 10:44037 (RA;XE)
Study of a heating system using a water-water heat pump, solar panels without covers and low temperature heat storage, 10:44046 (RA;XE)
Three years experiences from a summer stored earth-heat-pump-system, 10:44054 (RA;XE)
Research Programs
Earth coil/heat pump research at Oklahoma State University, 10:44050 (RA;XE)
Experiences with solar coupled storages with heat pumps for space heating in Austria, 10:44038 (RA;XE)
GROUND WATER
Chemical Composition
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Contamination
Calculation of fluxes through a repository caused by a local well, 10:43880 (R;SE)
Changes in major organic contaminants in the groundwater at the Hoe Creek underground coal gasification site, 10:43671 (R;US)
Impact of surface mining and conversion of coal on ground water and control measures in Poland, 10:43663 (RA;US)
Corrosive Effects
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Diffusion
Review of field-scale physical solute transport processes in saturated and unsaturated porous media. Final report, 10:45092 (R;US)
Environmental Transport
Understanding, testing and development of stochastic approaches to hydrologic flow and transport through the use of the multigrid method and synthetic data sets, 10:45291 (R;US)
Isotope Ratio
Work within the coordinated programme on studying the physical and isotopic behaviour of soil moisture in the zone of aeration. Final report for the period 1 April 1981-31 October 1984, 10:45133 (R;XA;In French)
Liquid Flow
Analysis of the natural water flows in the geothermal aquifer of the Bassin de Paris dogger, 10:44112 (R;FR;In French)
Quantitative Chemical Analysis
Changes in major organic contaminants in the groundwater at the Hoe Creek underground coal gasification site, 10:43671 (R;US)
Radiolysis
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)

BEST COPY AVAILABLE
FOR REPRODUCTION

Radionuclide Migration
Contact zones and hydrothermal systems as analogues to repository conditions, 10:43890 (R;US)
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Nuclear Technology Programs. Quarterly progress report, October-December 1984, 10:43887 (R;US)
Radionuclide Migation Project 1984 progress report, 10:45180 (R;US)
Water Pollution
Design of field-scale experiments for research on subsurface transport of organic chemicals. Summary report , 10:45171 (R;US)

GROUND-WATER RESERVES
See AQUIFERS

GROWTH (CRYSTAL)
See CRYSTAL GROWTH

GULF OF MEXICO
Petroleum Deposits
Oil-spill risk analysis for the Gulf of Mexico (proposed sales 94, 98, and 102) Outer Continental Shelf lease area. Final report, 10:43737 (R;US)

GUNS
Design
Description of a new 63-mm diameter gas gun facility, 10:44902 (R;US)
Performance
Description of a new 63-mm diameter gas gun facility, 10:44902 (R;US)

GYROTRONS
See MICROWAVE AMPLIFIERS

H

HADRON REACTIONS
Dispersion Relations
Characteristics of the particle production process in hadron-nucleus collisions: multiplicities and dispersions, 10:45643 (R;SU)
Multiplicity
Characteristics of the particle production process in hadron-nucleus collisions: multiplicities and dispersions, 10:45643 (R;SU)
Particle Production
Isotopic and isotonic effect for nucleon production in deep inelastic nuclear reactions, 10:45601 (RA;DE)

HADRON-HADRON INTERACTIONS
Drell Model
Experimental review of some predictions of the Drell Yan model in hadroproduction of dimuons, 10:45450 (RA;PL)
Inclusive Interactions
Heavy flavour contributions to massive lepton pair production, 10:45526 (J;NL)
Inelastic Scattering
Atomic states in nonelastic scattering processes, 10:45494 (RA;DE)
Pair Production
Heavy flavour contributions to massive lepton pair production, 10:45526 (J;NL)
Particle Production
Experimental review of some predictions of the Drell Yan model in hadroproduction of dimuons, 10:45450 (RA;PL)
Transverse Momentum
Aspects of experimental high transverse momentum physics, 10:45449 (RA;PL)

HADRONIC ATOMS
See also PROTONIUM
Hadron-Hadron Interactions
Atomic states in nonelastic scattering processes, 10:45494 (RA;DE)
Strong Interactions
Measurements of strong interaction effects in antiprotonic - He atoms, 10:45440 (RA;DE)
X-Ray Spectra
First observation of the nuclear E2-resonance effect in antiprotonic molybdenum, 10:45433 (RA;DE)
Study of antiprotonic X-ray and gamma spectra at LEAR, 10:45432 (RA;DE)
X-rays from anti-protonic hydrogen and deuterium, 10:45434 (RA;DE)

HADRONIC CLUSTERS
See CLUSTER EMISSION MODEL

HADRONS
See also RESONANCE PARTICLES
Multiple Production
Theoretical study of parton fragmentation and evolution into hadrons, 10:45527 (D;US)

HAFNIUM
Emission Spectroscopy
Determination of hafnium in zirconium metal and alloys by inductively coupled plasma using an algorithm for background correction, 10:44736 (R;CA)

HAFNIUM HYDRIDES
Electronic Structure
Self-consistent band structure calculations of titanium, zirconium and hafnium dihydrides, 10:44684 (J;CH)

HAFNIUM IONS
Electron Spin Resonance
Observation by EPR of trivalent hafnium in $LuPO_4$, YPO_4, and $ScPO_4$, 10:44725 (J;US)

HALIDES
See also CHLORIDES
Adsorption
Observation of adsorbate-induced surface states by elastic electron tunneling spectroscopy, 10:44916 (J;US)
Chemical Bonds
New examples of clusters, extended metal-metal bonding and interstitial derivatives, 10:44778 (R;US)

HALL EFFECT
Hamiltonians
Ground state energy of two-dimensional electrons in strong magnetic fields: small clusters in fractional occupation, 10:45754 (R;XA)

HALL GENERATORS
See MHD GENERATORS

HAMILTON OPERATORS
See HAMILTONIANS

HAMILTONIANS
Oscillations
Statistics of Poincare recurrences and the structure of the stochastic layer of a nonlinear resonance, 10:45774 (TG;US)

HANDLING (DATA)
See DATA PROCESSING

HANFORD RESERVATION
Gaseous Wastes
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1984, 10:43869 (R;US)
Liquid Wastes
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1984, 10:43869 (R;US)
Radiation Monitoring
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1984, 10:43869 (R;US)
Radioactive Waste Disposal
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1984, 10:43869 (R;US)
Radioactive Waste Management
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1984, 10:43869 (R;US)
Solid Wastes

TDHF-motivated macroscopic model for heavy ion collisions: a comparative study, 10:45708 (R;SU)

Nuclear Reaction Kinetics
Theory of nuclear reactions, with applications to heavy ion scattering reactions, 10:45703 (R;RO)

Particle Production
Pionic atoms from high-energy nuclear collisions, 10:45355 (RA;DE)
Subthreshold pion production in nucleus-nucleus collisions what is the mechanism, 10:45682 (R;DE)

Peripheral Collisions
Role of collision terms for nucleon emission in intermediate energy heavy ion reactions, 10:45597 (R;FR)

Pionization
Isopin effects in pionic bremsstrahlung emitted from tin-isotopes, 10:45683 (R;DE)

Scattering
Angular correlations in heavy-ion reactions, 10:45712 (R;GB)
Theory of nuclear reactions, with applications to heavy ion scattering reactions, 10:45703 (R;RO)

HEAVY IONS
Whenever possible use one of the more specific terms listed under ION BEAMS.

Diagnostic Uses
Failla Memorial Lecture: the future of heavy-ion science in biology and medicine, 10:45203 (J;US)

Radiation Injuries
HZE effects on mammalian cells, 10:45220 (R;DE)

Radiobiology
Failla Memorial Lecture: the future of heavy-ion science in biology and medicine, 10:45203 (J;US)

RBE
Failla Memorial Lecture: the future of heavy-ion science in biology and medicine, 10:45203 (J;US)

HEAVY LEPTONS
See also TAU PARTICLES

Flavor Model
Heavy flavour contributions to massive lepton pair production, 10:45526 (J;NL)

Pair Production
Heavy flavour contributions to massive lepton pair production, 10:45526 (J;NL)

HEAVY NUCLEI
For nuclei from mass 181 upwards.

LEAD 208
MERCURY 188
MERCURY 190

Algebraic Currents
Semiclassical description of rotating nuclei, 10:45705 (R;FR)

Alpha Decay
Nuclear decay by emission of charged particle-superasymmetric fission process, 10:45675 (R;SU)

Energy Levels
Spectra of nuclei in the lead region in the framework of the RPA with OBE-G-matrix interactions, 10:45663 (R;DE;In German)

Fission
Nuclear decay by emission of charged particle-superasymmetric fission process, 10:45675 (R;SU)

In-Beam Spectroscopy
Study of heavy element structure with in-beam α-, β- and and γ-ray spectroscopy, 10:45665 (BA;HU)

Neutron Reactions
Measurements of double differential cross sections (DDX) for several medium-weight and heavy nuclei at 15 MeV, 10:45636 (RA;JP;In Japanese)
Reviews of the simultaneous evaluation and evaluated covariance matrices for the cross sections on heavy nuclides, 10:45577 (RA;JP;In Japanese)

BEST COPY AVAILABLE
FOR REPRODUCTION

Nuclear Data Collections
Reviews of the simultaneous evaluation and evaluated covariance matrices for the cross sections on heavy nuclides, 10:45577 (RA;JP;In Japanese)
Nuclear Radii
Laser spectroscopy of radioactive beams, 10:45641 (RA;SU)
Rotation
Semiclassical description of rotating nuclei, 10:45705 (R;FR)
Spectral Shift
Laser spectroscopy of radioactive beams, 10:45641 (RA;SU)
Spontaneous Fission
Decay of heavy nuclei with cluster emission, 10:45676 (R;SU;In Russian)

HEAVY OILS
See PETROLEUM

HEAVY WATER
Molecular Structure
Neutron scattering, electronic excitations and chemical reactions, 10:45733 (RA;US)
Scattering of electron-volt neutrons by light and heavy water, 10:45732 (RA;US)
Neutron Transport
Momentum distribution of light atoms by deep inelastic neutron scattering, 10:45730 (RA;US)
Neutron scattering, electronic excitations and chemical reactions, 10:45733 (RA;US)
Scattering of electron-volt neutrons by light and heavy water, 10:45732 (RA;US)

HEAVY WATER COOLANT

NRX REACTOR
ZED-2 REACTOR
Pile Replacement Techniques
Methods for analysing substitution experiments in thermal reactors, 10:44241 (R;CA)
Reaction Kinetics
MULTICELL - a 3-D program for the simulation of reactivity devices in CANDU reactors, 10:44243 (R;CA)

HEAVY WATER MODERATOR
See HEAVY WATER

HEAVY WATER PLANTS
Accidents
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Scope determination, 10:43914 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. GASPROB code documentation, 10:43915 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Consequence assessments (GASPROB code), 10:43916 (R;CA)
Fission Product Release
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Scope determination, 10:43914 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. GASPROB code documentation, 10:43915 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Consequence assessments (GASPROB code), 10:43916 (R;CA)
Risk Assessment
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Scope determination, 10:43914 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. GASPROB code documentation, 10:43915 (R;CA)
Probabilistic consequence assessment of hydrogen sulphide releases from a heavy water plant. Consequence assessments (GASPROB code), 10:43916 (R;CA)

HEDENBERGITE
Origin
Formation of pigeonite on the join hedenbergite-ferrosilite at 11.5 and 15 kbar: experiments and a solution model, 10:45316 (J;US)

HELIANTHUS ANNUUS
See SUNFLOWERS

HELICAL INSTABILITY
Mode Locking
"Mode locking" of plasma helical instability in a tokamak, 10:45821 (TG;US)

HELIOSTATS
Damage
10 MWe Solar Thermal Central Receiver Pilot Plant mirror module corrosion, torque tube damage, and mirror reflectance survey, July 1984, 10:44022 (R;US)

HELIUM
Atom-Atom Collisions
Search for delayed photons from 2S-muonic He at 40 atmospheres, 10:45379 (RA;DE)
Dispersion Relations
S(k,omega) and the eigenmodes of classical fluids, 10:45407 (RA;US)
Eigenfunctions
S(k,omega) and the eigenmodes of classical fluids, 10:45407 (RA;US)
Electron-Atom Collisions
(e,2e) reactions on atoms and molecules, 10:45393 (RA;US)
Hadronic Atoms
Measurements of strong interaction effects in antiprotonic - He atoms, 10:45440 (RA;DE)
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1984-March 15, 1985, 10:45350 (R;US)
Metastable States
Magnetic monopole detectors based on He(2^3S), 10:45030 (J;US)
Muonic Atoms
Neutral muonic helium (3), 10:45366 (RA;DE)
Neutron Transport
Momentum distribution of light atoms by deep inelastic neutron scattering, 10:45730 (RA;US)
Shock Waves
Condensed matter at high shock pressures, 10:45401 (R;US)

HELIUM 3
Density Matrix
One-body density matrix and the momentum density in ^{4}He and ^{3}He, 10:44716 (RA;US)
Momentum Transfer
One-body density matrix and the momentum density in ^{4}He and ^{3}He, 10:44716 (RA;US)
Nucleosynthesis
Big bang photosynthesis and pregalactic nucleosynthesis of light elements, 10:45337 (J;US)

HELIUM 3 REACTIONS
Charge-Exchange Reactions
Δ resonance excitation in nuclei by (^{3}He,t) reactions, 10:45700 (RA;DE)
High-energy spin-isospin modes in nuclei, 10:45698 (RA;DE)
P (^{3}He,t)Δ^{++} reaction, 10:45586 (RA;DE)
Particle Production
Comparative study of (^{3}He,π^-) and (^{3}He,π^+) exclusive reactions on ^{7}Li and ^{12}C, 10:45602 (R;FR)
Precompound-Nucleus Emission
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data, 10:45618 (R;SU;In Russian)

HELIUM 3 TARGET
Electron Reactions
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)
Kaon Minus Reactions
Relatively stable strange dibaryons, 10:45498 (RA;DE)

HELIUM 4
See also HELIUM II

BEST COPY AVAILABLE

Density Matrix
One-body density matrix and the momentum density in ^{4}He and ^{3}He, 10:44716 (RA;US)
Distribution Functions
Pair distributions and energy-density functionals for liquid ^{4}He drops, 10:45413 (J;US)
Energy Density
Pair distributions and energy-density functionals for liquid ^{4}He drops, 10:45413 (J;US)
Momentum Transfer
One-body density matrix and the momentum density in ^{4}He and ^{3}He, 10:44716 (RA;US)
Nucleosynthesis
Big bang photosynthesis and pregalactic nucleosynthesis of light elements, 10:45337 (J;US)

HELIUM 4 REACTIONS
See ALPHA REACTIONS

HELIUM 4 TARGET
Deuteron Reactions
Excitation of breathing resonances under the S-shell nuclei scattering by α-particle, 10:45587 (R;SU;In Russian)
Electron Reactions
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)

HELIUM II
The phase of liquid helium-4 which is stable at temperatures between absolute zero and the lambda point (about 2.2 K).
Bose-Einstein Condensation
Bose Condensate in He II, 10:45408 (RA;US)

HELIUM IONS
Muonic Ions
Measurement of the lifetime and quenching rate of metastable 2S muonic helium ions, 10:45368 (RA;DE)
Spectral Shift
Experimental study of once ionized Helium Pα line shift. Plasma polarization effect, 10:45353 (R;FR;In French)

HEMATITE
Compression
Influence of shock compression on the specific surface area of inorganic powders, 10:44784 (R;US)
Surface Area
Influence of shock compression on the specific surface area of inorganic powders, 10:44784 (R;US)

HEMICELLULOSE
Thermochemical Processes
Development of a process to produce chemicals from lignocellulose. Final report, 10:43944 (R;US)

HETEROCYCLIC COMPOUNDS

Metallurgical Effects
Hydrogen attack in Cr-Mo steels at elevated temperatures. Final technical report, September 1, 1980-August 31, 1983, 10:44600 (R;US)
Muonic Atoms
New experimental results on hyperfine transitions in muonic hydrogen isotopes, 10:45369 (RA;DE)
Muonic Molecules
Possible influence of the strong interaction on the mesomolecular system properties, 10:45375 (RA;DE)
Recombination
Hydrogen trapping, diffusion and recombination in austenitic stainless steels, 10:45886 (J;NL)
Theoretical aspects of the stabilization of atomic hydrogen, 10:45384 (R;NL)
Spectral Shift
Comment on "Shifts of hydrogen lines from electron collisions in dense plasmas", 10:45403 (J;US)
Trapping
Hydrogen trapping, diffusion and recombination in austenitic stainless steels, 10:45886 (J;NL)
Van der Waals Forces
Rotational predissociation of Ar-HD van der Waals complex: space-fixed complex-coordinate coupled-channel calculations, 10:44789 (J;NL)
Wall Effects
Dynamical calculation of low energy hydrogen reflection, 10:45891 (J;NL)

HYDROGEN 1
Diffusion
Analytical approximation formulae for hydrogen diffusion in a metal slab, 10:45848 (R;DE)
NMR Spectra
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH$_3$)/sub n/CR'(COOC$_2$H$_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH$_3$)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)

HYDROGEN 1 MINUS BEAMS
Beam Production
Surface generation of negative hydrogen ion beams, 10:45846 (R;NL)

HYDROGEN 1 TARGET
Alpha Reactions
Pion absorption in the ^{4}Hep - dppn reaction, 10:45590 (R;SU;In Russian)
Fabrication
Electron impact heated atomic hydrogen oven, 10:45405 (J;US)
Helium 3 Reactions
P (^{3}He,t)Δ^{++} reaction, 10:45586 (RA;DE)
Neutron Reactions
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Proton Reactions
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS
Cleaning
Determination of the global recombination rate coefficient for the ISX-B Tokamak, 10:45824 (R;US)
Cluster Beams
Vibrational predissociation spectroscopy of hydrogen cluster ions, 10:45397 (R;US)
Deposition
Effects of atmospheric deposition on forest nutrient cycles, 10:45139 (J;US)

HYDROGEN LOGS
See NEUTRON LOGGING

HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS

HYDROGEN NITRATES
See NITRIC ACID

HYDROGEN PHOSPHATES
See PHOSPHORIC ACID

HYDROGEN PRODUCTION
Coal Gasification
Production of hydrogen for hydrogenation of heavy oil and coal, 10:43920 (R;DE;In German)
Photochemical Reactions
Vectorial electron transfer on designed surfaces. Annual report, January 1984-January 1985, 10:44827 (R;US)
Photolysis
Photodissociation of water molecule. Photoreduction of carbon dioxide molecule, 10:44825 (R;FR;In French)

HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Absorption
Process for the removal of CO_2 and possibly H_2S from natural gases, 10:43749 (TG;GB)
Breakdown
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Catalytic Effects
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Corrosive Effects
Behavior of pressurized Incoloy 800H tubes in environments pertaining to coal gasification, 10:43629 (R;US)
Electron Attachment
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Partial Pressure
Role of iron sulfides stoichiometry in the direct liquefaction of coal, 10:43620 (R;US)
Removal
Hydrogen sulfide removal from hot gas and concentration of sulfur using electrochemistry. Annual report, August 1983-August 1984, 10:43634 (R;US)

HYDROGENATION
Catalysts
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
New technology concept for two-stage liquefaction of coal, 10:43626 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
HYDROLOGY
Computer Codes
Supercomputers in subsurface transport research: HYDROGEOCHEM on the Hypercube computer, 10:45169 (R;US)
Mathematical Models
Understanding, testing and development of stochastic approaches to hydrologic flow and transport through the use of the multigrid method and synthetic data sets, 10:45291 (R;US)
HYDRONIUM IONS
See OXONIUM IONS
HYDROTHERMAL CONVECTIVE SYSTEMS

ION BEAM INJECTION
Beam Optics
Optical properties of the electrostatic mirror: application to the Orsay project, 10:44977 (R;FR;In French)

ION BEAM TYPE REACTORS
See ION BEAM FUSION REACTORS

ION BEAMS
See also HYDROGEN 1 MINUS BEAMS
Beam Optics
Introduction to first order optics. Two lectures given to Scanditronix staff, May 1982, 10:44936 (R;CA)
Beam Transport
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel, 10:45856 (R;US)
Summary from working group on multiple beams and funneling, 10:44955 (R;US)
Focusing
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel, 10:45856 (R;US)
Radiobiology
Failla Memorial Lecture: the future of heavy-ion science in biology and medicine, 10:45203 (J;US)
Stability
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel, 10:45856 (R;US)
Stability of ions in bunched-beam machines, 10:44966 (RA;XC)
Uses
Fundamental aspects of ion beam surface modification: defect production and migration processes, 10:44653 (J;CH)

ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING

ION DETECTION
Gas Scintillation Detectors
Gas scintillation drift chamber for heavy ion detection, 10:45028 (R;DE)
Spatial Resolution
Gas scintillation drift chamber for heavy ion detection, 10:45028 (R;DE)

ION EXCHANGE MEMBRANES
See MEMBRANES

ION IMPLANTATION
Sample Preparation
Preparation of backthinned ceramic specimens, 10:44739 (R;US)

ION RINGS
Energy Losses
Axial energy loss of a moving ion ring in a plasma, 10:45815 (J;GB)

ION SOURCES
See also DUOPLASMATRONS
PENNING ION SOURCES
Antiprotons
Anti p production and collection, 10:44967 (RA;XC)
Manufacturing
Mechanical engineering, 10:44863 (RA;ZA)

ION WAVES
Brillouin Effect
Harmonic generation of ion waves due to Brillouin backscattering, 10:45412 (R;US)

ION-ATOM COLLISIONS
Elastic Scattering
Scattering cross sections of muonic hydrogen atoms on hydrogen isotope nuclei, 10:45381 (RA;DE)

IONIC REACTIONS
See IONS

IONIZATION CALORIMETERS
See SHOWER COUNTERS

IONOSPHERE
See also D REGION
Electron Beam Injection
Very low frequency valuation of a modulated beam of electrons: an application to the ARAKS experiment, 10:45343 (R;FR;In French)
Parametric Instabilities
Millimeter-wave generation by relativistic electron beams. Annual report, 1 October 1983-30 September 1984, 10:45777 (R;US)
Plasma Waves
Very low frequency valuation of a modulated beam of electrons: an application to the ARAKS experiment, 10:45343 (R;FR;In French)

IONOSPHERIC STORMS
Surges
Model for the propagation of the westward traveling surge, 10:45344 (R;SE)

IONS
Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS
See also CALCIUM IONS
CERIUM IONS

IRIDIUM 186
De-Excitation
Structure of ^{186}Ir and decoupling phenomena in doubly-odd deformed nuclei, 10:45657 (J;NL)
High Spin States
Structure of ^{186}Ir and decoupling phenomena in doubly-odd deformed nuclei, 10:45657 (J;NL)

IRIDIUM ALLOYS
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)

IRON
Agglomeration
Reactions of iron clusters with hydrogen. III. Laser-induced desorption of H_2 by multiphoton absorption, 10:44785 (J;US)
Cosmochemistry
Some clues for the iron origin in galaxy clusters, 10:45324 (R;FR)
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Magnetic Properties
First-principles calculation of the magnetic properties of paramagnetic fcc iron, 10:44594 (R;US)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Paramagnetism
First-principles calculation of the magnetic properties of paramagnetic fcc iron, 10:44594 (R;US)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Proton Reactions
Prompt single muon production by protons on iron, 10:45446 (RA;PL)
Tensile Properties
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)

IRON 54 TARGET
Helium 3 Reactions
Δ resonance excitation in nuclei by (^{3}He,t) reactions, 10:45700 (RA;DE)

IRON 56 TARGET
Electron Reactions
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)
Lithium 7 Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Neutron Reactions
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)

IRON ALLOYS
See also INCONEL 600
IRON BASE ALLOYS
Physical Radiation Effects
Ion mixing and radiation induced segregation in the Fe, Ni, Si system, 10:44581 (R;FR)

IRON BASE ALLOYS
See also INCOLOY ALLOYS
STEELS
Dislocations
Diffraction and microscopy studies of the structure of grain boundaries in Fe, Fe-base alloys and ceramic materials. Final technical report, 10:44598 (R;US)
Grain Boundaries
Diffraction and microscopy studies of the structure of grain boundaries in Fe, Fe-base alloys and ceramic materials. Final technical report, 10:44598 (R;US)
Mechanical Properties
Investigation of the cryogenic mechanical properties of low thermal-expansion superalloys, 10:44647 (R;US)

IRON BORIDES
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)

IRON CARBIDES
Catalytic Effects
Silica-supported iron nitride in Fischer-Tropsch reactions. II. Comparison of the promotion effects of potassium and nitrogen on activity and selectivity, 10:43939 (J;US)

IRON CHLORIDES
Corrosive Effects
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)

IRON COMPLEXES
Catalytic Effects
Use of immobilized iron chelate catalysts for the combined removal of NO/sub x/ and SO/sub x/ from combustion flue gases. Final technical report, August 15, 1984-May 14, 1985, 10:43656 (R;US)
Electron Transfer
Theoretical studies of electron and proton transfer processes in fluids. Progress report, August 1984-August 1985, 10:44772 (R;US)

IRON COMPOUNDS

IRON CARBIDES
IRON CHLORIDES
IRON NITRIDES
IRON OXIDES
IRON PHOSPHIDES
IRON SULFATES
IRON SULFIDES
Physical Radiation Effects
Influence of high energetic irradiations with heavy ions on the magnetic properties of ferrimagnetic iron granates, 10:44667 (R;DE;In German)
Qualitative Chemical Analysis
Moessbauer methods and spectrometers specialized in qualitative and quantitative determinations, 10:44744 (R;RO;In Romanian)
Quantitative Chemical Analysis
Moessbauer methods and spectrometers specialized in qualitative and quantitative determinations, 10:44744 (R;RO;In Romanian)
Structural Chemical Analysis
Moessbauer methods and spectrometers specialized in qualitative and quantitative determinations, 10:44744 (R;RO;In Romanian)

IRON NITRIDES
Catalytic Effects
Silica-supported iron nitride in Fischer-Tropsch reactions, 10:43938 (J;US)
Silica-supported iron nitride in Fischer-Tropsch reactions. II. Comparison of the promotion effects of potassium and nitrogen on activity and selectivity, 10:43939 (J;US)

IRON OXIDES
See also HEMATITE
MAGNETITE
ZIRCONOLITE
Dissolution
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)

IRON PHOSPHIDES
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)

Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
IRON SULFATES
Phase Diagrams
Study of alkali- and sulfur-enhanced corrosion of advanced energy systems. Final report, 10:44510 (R;US)
IRON SULFIDES
See also PYRRHOTITE
Stoichiometry
Role of iron sulfides stoichiometry in the direct liquefaction of coal, 10:43620 (R;US)
IRRADIATION DEVICES
Operation
Progress on the establishment of a national low-temperature neutron irradiation facility (NLTNIF), 10:45839 (RA;US)
IRRADIATION PLANTS
Design
Irradiator design with large-volume source cylinders, 10:43918 (R;US)

Variational estimates for the mass gap of SU(2) Euclidean lattice gauge theory, 10:45564 (R;NL)
Four-Dimensional Calculations
Analytical evaluation of the partition function for unit hypercubes in four dimensions, 10:45563 (R;NL)
Gauge Invariance
Lattice gauge theory, 10:45554 (RA;PL)
Gluons
Gluon condensate from lattice caculations: SU(3) pure gauge theory, 10:45555 (RA;PL)
Instantons
Classical instanton on a 4-dimensional periodic lattice, 10:45550 (R;DE)
Mass Spectra
Variational estimates for the mass gap of SU(2) Euclidean lattice gauge theory, 10:45564 (R;NL)
Monte Carlo Method
Iterative hopping expansion algorithm for Monte Carlo calculations with very light fermions, 10:45548 (R;DE)
Partition Functions
Analytical evaluation of the partition function for unit hypercubes in four dimensions, 10:45563 (R;NL)
Ritz Method
Analytical evaluation of the partition function for unit hypercubes in four dimensions, 10:45563 (R;NL)
SU-2 Groups
Variational estimates for the mass gap of SU(2) Euclidean lattice gauge theory, 10:45564 (R;NL)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LAUNDRIES
Performance
Performance monitoring of the Sunmat laundromat. Final report, 10:44072 (R;US)
Solar Water Heating
Performance monitoring of the Sunmat laundromat. Final report, 10:44072 (R;US)

LAWRENCE BERKELEY LABORATORY
Computer Codes
Software tools programmer's manual, 10:45919 (R;US)

LAWRENCE LIVERMORE LABORATORY
Safety Engineering
Earthquake safety program at Lawrence Livermore National Laboratory, 10:44910 (R;US)

LEACHATES
Chemical Composition
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)
Water Pollution
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)

LEAD
Carbon 12 Reactions
Total disintegration of lead nuclei by ^{12}C nuclei at 4.5 A GeV/c momentum, 10:45662 (R;SU;In Russian)
Corrosion
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Kaonic Atoms
K^- and Σ^- atom studies with high-Z targets, 10:45357 (RA;DE)
Leaching
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Muonic Atoms
New evaluation of muonic X-ray energies in 208-lead, 10:45364 (RA;DE)
Neutron Reactions
Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University, 10:45604 (RA;JP;In Japanese)
Pion Minus Reactions
Two particle correlations in pion-nucleus interactions at 40 GeV/c, 10:45505 (RA;PL)
Pionic Atoms
Pionic 4F-3D X-rays from ^{208}Pb and ^{209}Bi, 10:45361 (RA;DE)

LEAD 206 TARGET
Manganese 55 Reactions
Some problems of fusion and fission of heavy nuclear systems, 10:45674 (RA;SU;In Russian)

LEAD 207 TARGET
Manganese 55 Reactions
Some problems of fusion and fission of heavy nuclear systems, 10:45674 (RA;SU;In Russian)

LEAD 208
Excited States
Transversal E1-resonance in spherical nuclei, 10:45619 (R;SU;In Russian)

LEAD 208 TARGET
Argon 36 Reactions
High energy structures in heavy ion collisions: a multiphonon description, 10:45661 (R;FR)
Carbon 12 Reactions
Subthreshold pion production in nucleus-nucleus collisions what is the mechanism, 10:45682 (R;DE)
Helium 3 Reactions
Δ resonance excitation in nuclei by (^3He,t) reactions, 10:45700 (RA;DE)

Manganese 55 Reactions
Some problems of fusion and fission of heavy nuclear systems, 10:45674 (RA;SU;In Russian)
Proton Reactions
Violation of Feynman scaling in yields of hadron beam fragments from nucleons and nuclei, 10:45492 (RA;DE)
LEAD COMPLEXES
Radiolysis
Study of lead and cadmium cryptate reduction by pulsed radiolysis, 10:44832 (R;FR;In French)
LEAD SELENIDES
Crystal Growth
Low temperature synthesis of pseudobinary chalcogenides, 10:44711 (RA;IL)
LEAD SULFIDES
Absorptivity
Size quantization in small semiconductor particles, 10:44728 (J;US)
LEAD TELLURIDES
Crystal Growth
Low temperature synthesis of pseudobinary chalcogenides, 10:44711 (RA;IL)
LEAD-ACID BATTERIES
Design and cost of standardized lead-acid battery systems for utility energy management. Final report, 10:44165 (R;US)
Performance Testing
Performance of advanced lead-acid batteries for load-leveling applications, 10:44451 (J;US)
LEAK TESTING
Tracer Techniques
Water leak detection in the cooling system of the blast furnace walls, by using radiotracer techniques, 10:45162 (RA;BR)
LEAR
Low Energy Antiproton Storage Ring at CERN.
Electron Cooling
Status and perspectives of the electron cooling device under construction at CERN, 10:44944 (R;CH)
Reviews
LEAR, 10:44999 (RA;XC)
LEASING
Legal Aspects
[National Coal Policy Project]. Mining Task Force report submitted for review by the plenary, September 26-27, 1979, 10:43682 (R;US)
LEAVES
Morphological Changes
Evaluation of the effects of acid precipitation on forest ecosystems using microcosm simulators: joint project TVA-ORNL, 10:45270 (RA;US)
LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
LESSER ANTILLES
Geothermal Systems
Hydrothermal mineralization and geochemical balance of fossil geothermal fields: preliminary study on two fields in Martinique and Lesser Antilles, 10:44114 (R;FR;In French)
LEVEL INDICATORS
Engineering Drawings
Survey and alignment liquid level MKIII (Engineering Materials), 10:45041 (E;US)
Research Programs
Advanced Two-Phase Flow Instrumentation Program. Quarterly progress report, January-March 1981. Volume 1, 10:44408 (R;US)
LI-DRIFTED GE DETECTORS
Sample Changers
Automatic sample changer for gamma spectrometry, 10:45021 (R;GB)
LIGHT GUIDES
See OPTICAL FIBERS
LIGHT NUCLEI
For nuclei with mass 1-40.
See also CARBON 12
CARBON 13
CARBON 14
DEUTERIUM
HELIUM 3
HELIUM 4
HYDROGEN 1
LITHIUM 6
LITHIUM 7
MAGNESIUM 24
NEON 19
NEON 20
TRITIUM
Matrix Elements
Generating matrix elements of the potential energy operator of light and intermediate mass nuclei on the basic function of the SU(3) model, 10:45706 (R;SU;In Russian)
LIGHT WATER COOLED REACTORS
See WATER COOLED REACTORS
LIGHTING SYSTEMS
Ballasts
Energy-efficient H.I.D. solid-state ballast. Phase I. Final report (High pressure sodium), 10:45163 (R;US)
Control Systems
CONTROLITE 1.0 Lighting Control Systems and Daylighting Analysis Program: user's manual. Revision, 10:44545 (R;US)
Energy Consumption
CONTROLITE 1.0 Lighting Control Systems and Daylighting Analysis Program: user's manual. Revision, 10:44545 (R;US)
Energy Efficiency
Energy-efficient H.I.D. solid-state ballast. Phase I. Final report (High pressure sodium), 10:45163 (R;US)
Performance Testing
Energy-efficient H.I.D. solid-state ballast. Phase I. Final report (High pressure sodium), 10:45163 (R;US)
Research Programs
Applied Science Division annual report, Solar Energy Program FY 1983, 10:44070 (R;US)
LIGHTNING
Electric Fields
Horizontal electric fields from lightning return strokes, 10:44152 (R;US)
LIGNIN
Coalification
^{13}C-NMR tracer to probe coalification (Lignin coalified at 200°C), 10:43648 (R;US)
Labelling
^{13}C-NMR tracer to probe coalification (Lignin coalified at 200°C), 10:43648 (R;US)
NMR Spectra
^{13}C-NMR tracer to probe coalification (Lignin coalified at 200°C), 10:43648 (R;US)
LIME-LIMESTONE WET SCRUBBING PROCESSES
Efficiency
Adipic acid enhanced flue gas desulfurization process for industrial boilers. Volume 2. Technical assessment. Project summary, 10:43664 (R;US)
LIMITERS
Coatings
Low-Z C+SiC alloy coating material for plasma interface applications, 10:45887 (J;NL)
Surface microanalysis of C+SiC coating on limiter/armor exposed in Doublet III, 10:45877 (J;NL)
Configuration
Evaluation of limiter configurations in ZT-40M, 10:45880 (J;NL)
Impurities
Characterization of impurities deposited on the PDX graphite rail limiter, 10:45889 (J;NL)
Surface microanalysis of C+SiC coating on limiter/armor exposed in Doublet III, 10:45877 (J;NL)
Neutral-Particle Transport
Monte Carlo simulation of the ISX pumped limiter, 10:45875 (J;NL)
Performance
Observation of enhanced particle removal rates in pump limiter simulation experiments, 10:45864 (J;NL)
Physical Radiation Effects
Graphite limiter damage due to runaway electrons and abrupt Isub(p) termination in Doublet III, 10:45879 (J;NL)
Reviews
Tokamak pump limiters, 10:45870 (J;NL)

Testing
Observation of enhanced particle removal rates in pump limiter simulation experiments, 10:45864 (J;NL)

LINACS
See LINEAR ACCELERATORS

LINEAR ACCELERATORS
See also QUADRUPOLE LINACS
STANFORD LINEAR COLLIDER
Beam Dynamics
Effect of focusing field nonlinearities in MBE-4 on transverse beam dynamics, 10:44958 (R;US)
Beam Optics
Electron optics properties of field emission tetrode guns and of a linear accelerator, 10:44952 (R;FR;In French)
Colliding Beams
Linear colliders - prospects 1985, 10:45004 (R;US)
Data Acquisition Systems
Isolated data acquisition system for high voltage applications, 10:45912 (R;US)
Feasibility Studies
Space charge and high intensity effects in radiofrequency linacs, 10:44932 (R;FR)
Induction
MBE-4, a heavy ion multiple-beam experiment, 10:44933 (R;US)
Lectures
Space charge and high intensity effects in radiofrequency linacs, 10:44932 (R;FR)
Nonlinear Problems
Space charge and high intensity effects in radiofrequency linacs, 10:44932 (R;FR)
Proton Beams
Compact pulsed accelerator, 10:44930 (R;US)
Pulse Generators
Compact pulsed accelerator, 10:44930 (R;US)
Space Charge
Space charge and high intensity effects in radiofrequency linacs, 10:44932 (R;FR)
Specifications
MBE-4, a heavy ion multiple-beam experiment, 10:44933 (R;US)

LINERS
Materials Testing
Behavior of refractory linings for slagging gasifiers, 10:43631 (R;US)
Thickness
Behavior of refractory linings for slagging gasifiers, 10:43631 (R;US)
Zirconium
Multiple ramp tests of zirconium liner fuel, 10:44208 (RA;US)

LINOLEIC ACID
Purification
Purification of oleic acid and linoleic acid, 10:44818 (J;US)

LIOUVILLE EQUATION
See BOLTZMANN-VLASOV EQUATION

LIQUEFIED NATURAL GAS
Combustion
Thermal infrared analysis of flame front propagation in an LNG burn, 10:43751 (RA;US)
Flame Propagation
Thermal infrared analysis of flame front propagation in an LNG burn, 10:43751 (RA;US)
Gas Spills
Detection of atmospheric methane using a two-wave length HeNe laser system, 10:43753 (R;US)

LIQUEFIED PETROLEUM GASES
Data Compilation
Petroleum Supply Monthly, June 1985, 10:43727 (R;US)

LIQUEFIERS
See CONDENSERS

LIQUID EFFLUENTS
See LIQUID WASTES

LIQUID FUELS
See also FUEL OILS
GASOLINE
KEROSENE
Atomization
Injection, atomization, ignition, and combustion of liquid fuels in high-speed air streams. Annual scientific report, 1 December 1982-30 November 1983, 10:44849 (R;US)
Combustion
Injection, atomization, ignition, and combustion of liquid fuels in high-speed air streams. Annual scientific report, 1 December 1982-30 November 1983, 10:44849 (R;US)

LIQUID METAL TEST FACILITIES
See TEST FACILITIES

LIQUID SCINTILLATION DETECTORS
Efficiency
Efficiency of neutron detection by the system of liquid scintillation counters. Calculation program for neutron transport with E < 20 MeV, 10:45025 (R;SU;In Russian)

LIQUID WASTES
See also WASTE WATER
Combustion
Development of an analytical apparatus and analytical methods for the combustion of chemical residues and wastes, 10:43955 (R;DE;In German)
Combustion Products
Development of an analytical apparatus and analytical methods for the combustion of chemical residues and wastes, 10:43955 (R;DE;In German)
Radioactive Waste Processing
New directions in liquid wastes treatment, 10:43828 (R;FR)

LIQUIDS
See also COAL LIQUIDS
Neutron Transport
Momentum distributions, 10:45728 (RA;US)
Shock Waves
Condensed matter at high shock pressures, 10:45401 (R;US)

LITHIUM
Neutron Reactions
Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University, 10:45604 (RA;JP;In Japanese)

LITHIUM 6
E1-Transitions
Analysis of form factors of electric transitions in light nuclei with the use of electromagnetic current continuity equation, 10:45608 (R;SU;In Russian)
E2-Transitions
Analysis of form factors of electric transitions in light nuclei with the use of electromagnetic current continuity equation, 10:45608 (R;SU;In Russian)
Excited States
Excitation of breathing resonances under the S-shell nuclei scattering by α-particle, 10:45587 (R;SU;In Russian)

LITHIUM 6 REACTIONS
Precompound-Nucleus Emission
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data, 10:45618 (R;SU;In Russian)

LITHIUM 6 TARGET
Hadron Reactions
Isotopic and isotonic effect for nucleon production in deep inelastic nuclear reactions, 10:45601 (RA;DE)
Neutron Reactions
Deuteron exchange mechanism for ^{6}Li(n,α), 10:45600 (RA;XA)

LITHIUM 7
Nucleosynthesis
Big bang photosynthesis and pregalactic nucleosynthesis of light elements, 10:45337 (J;US)

LITHIUM 7 REACTIONS
Compound-Nucleus Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)

Heavy Ion Fusion Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Incomplete Fusion Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
Precompound-Nucleus Emission
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)

LITHIUM 7 TARGET
Carbon 12 Reactions
Subthreshold pion production in nucleus-nucleus collisions what is the mechanism, 10:45682 (R;DE)
Hadron Reactions
Isotopic and isotonic effect for nucleon production in deep inelastic nuclear reactions, 10:45601 (RA;DE)
Helium 3 Reactions
Comparative study of ($^3He,\pi^-$) and ($^3He,\pi^+$) exclusive reactions on ^7Li and ^{12}C, 10:45602 (R;FR)
Neutron Reactions
Measurements of the gamma-ray production cross section at Tohoku University, 10:45672 (RA;JP;In Japanese)

LITHIUM ALLOYS
Electrochemistry
Lithium alloys for negative electrodes, 10:44448 (R;DK;In Danish)
Precipitation Hardening
Theoretical analysis of the aging response of Al-Li alloys strengthened by Al_3Li precipitates, 10:44638 (R;US)
Sputtering
Sputtering properties of copper-lithium alloys at reactor-level temperatures and surface erosion rates, 10:45884 (J;NL)

LITHIUM COMPOUNDS
See also LITHIUM SILICATES
Physical Radiation Effects
FUBR-1A experimental results, 10:45834 (RA;US)
Thermodynamic Properties
Property studies of solid tritium breeding materials, 10:45832 (RA;US)

LITHIUM FLUORIDES
Self-Diffusion
Diffusion phenomena of fluorine and cations in molten Li_3BeF_4, $LiBeF_3$ and $NaBeF_3$, 10:44780 (R;JP)

LITHIUM SILICATES
Thermodynamic Properties
Property studies of solid tritium breeding materials, 10:45832 (RA;US)

LITHIUM-SULFUR BATTERIES
Performance Testing
Constant-current discharge tests of a 12 d cell in-series Li/SO_2 battery pack under-counter arm-decoy requirements. Final report for FY 82, 10:44446 (R;US)

LMFBR TYPE REACTORS
See also BOR-60 REACTOR
SNR REACTOR
Boiling Detection
Prediction methods in parametric signal models for early failure detection, 10:44366 (R;DE;In German)
Breeding Blankets
Conceptual design basis and temperature predictions in a simulated instrumented LMFBR blanket subassembly, 10:44256 (R;US)
Fuel Element Clusters
Measurements of local temperature distributions in rod bundles with sodium flow, 10:44270 (R;DE;In German)
Heat Exchangers
Numerical simulation of heat exchanger, 10:44257 (R;US)
Primary Coolant Circuits
Silicon compound formation in liquid sodium, 10:44259 (R;US)
Quality Assurance
Liquid Metal Reactor Programs: safeguards and program assurance. Technical progress report, June 1985, 10:44271 (R;US)
Reactor Accidents
Technique of analysis and error detection for thermo-hydraulic system data, 10:44341 (R;US)
Reactor Components
Review of effects of long-term aging on the mechanical properties and microstructures of Types 304 and 316 stainless steel, 10:44253 (R;US)
Reactor Internals
Avoiding leakage flow-induced vibration by a tube-in-tube slip joint, 10:44255 (R;US)
Reactor Materials
Silicon compound formation in liquid sodium, 10:44259 (R;US)
Reactor Safety Experiments
Technique of analysis and error detection for thermo-hydraulic system data, 10:44341 (R;US)
Standards
Liquid Metal Reactor Programs: safeguards and program assurance. Technical progress report, June 1985, 10:44271 (R;US)
Steam Generators
Real-time LMFBR steam generator analyzer, 10:44254 (R;US)
Valves
CREDO analysis: a comparison of liquid metal and water valve reliabilities, 10:44252 (R;US)

LNG

LOFT REACTOR
Calculation of membrane penetration M-14 air flow capacity, 10:44326 (R;US)
Experiment data report for LOFT nuclear small break experiment L3-5/L3-5A, 10:44385 (R;US)
Electric Cables
Seismic stress analysis of LOFT Room B-100 cable tray supports, 10:44344 (R;US)
Errors
Condition I through IV faults during blowdown, 10:44324 (R;US)
Flanges
Simplified elastic-plastic analysis of Flange No. 7, LOFT Blowdown System. Supplement 1, 10:44325 (R;US)
Fuel Motion Detection
Summary report of fuel rod displacement sensor for LOFT, 10:44329 (R;US)
Seismic Effects
Seismic stress analysis of LOFT Room B-100 cable tray supports, 10:44344 (R;US)
Stress Analysis
Simplified elastic-plastic analysis of Flange No. 7, LOFT Blowdown System. Supplement 1, 10:44325 (R;US)
Supports
Seismic stress analysis of LOFT Room B-100 cable tray supports, 10:44344 (R;US)
Transducers
Summary report of fuel rod displacement sensor for LOFT, 10:44329 (R;US)

LOGIC (MATHEMATICS)
See MATHEMATICAL LOGIC

LONGWALL MINING
Dusts
Refinement and evaluation of basic longwall dust-control techniques. Final report, July 1981-December 1984, 10:43683 (R;US)

LOOSE PARTS MONITORING
Technology Assessment
Characteristics and performance experience of loose-part monitoring systems in US commercial power reactors, 10:44293 (R;US)

LOS ALAMOS SCIENTIFIC LABORATORY
See LASL
LOSS OF COOLANT
Load Combination Program. Progress report No. 6. Vol. 2 (LOCA induced by earthquake), 10:44382 (R;US)
Chemical Reactions
Behavior of the Zircaloy cladding tube in a mixed gas of hydrogen and steam, 10:44440 (TG;US)
Computer Calculations
PWR loss-of-coolant accident analysis capability of the WRAP-EM system, 10:44383 (R;US)
Computer Codes
TRAC-PD2: advanced best-estimate computer program for pressurized water reactor loss-of-coolant accident analysis, 10:44403 (R;US)
Computerized Simulation
Comparison of the TRAC calculational results for the Slab Core Test Facility model and the reference German pressurized water reactor during reflood. Annual report, 1984, 10:44396 (R;US)
TRAP: plotting package for TRAC (Transient Reactor Analysis), 10:44381 (R;US)
Fission Product Release
Fission product release from BWR fuel under LOCA conditions, 10:44388 (R;US)
Fuel Cans
Multirod Burst Test Program. Progress report, July-December 1980, 10:44395 (R;US)
Fuel Element Clusters
ORMDIN: a finite element program for two-dimensional nonlinear inverse heat conduction analysis, 10:44386 (R;US)
Fuel Element Failure
Multirod Burst Test Program. Progress report, January-June 1981. Volume 1, 10:44410 (R;US)
Heat Transfer
Blowdown Heat Transfer Separate-Effects Program. Quarterly progress report, October-December 1980, 10:44401 (R;US)
Core spray heat transfer model for RELAP4/MOD7, 10:44342 (R;US)
Lumped-parameter models for transient conduction in nuclear reactor components, 10:44380 (R;US)
ORNL small-break LOCA heat transfer test series I: rod bundle heat transfer analysis, 10:44402 (R;US)
Simulation of a BWR fuel bundle under small break conditions, 10:44340 (R;US)
Thermal-shock-resistant cermet insulators, 10:44409 (R;US)
Water Reactor Safety Research Division. Quarterly progress report, July 1-September 30, 1980, 10:44389 (R;US)
Hydraulics
Blowdown Heat Transfer Separate-Effects Program. Quarterly progress report, October-December 1980, 10:44401 (R;US)
Core spray heat transfer model for RELAP4/MOD7, 10:44342 (R;US)
Thermal-shock-resistant cermet insulators, 10:44409 (R;US)
Transient testing of an in-core impedance flow sensor in a 9-rod heated bundle, 10:44394 (R;US)
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44364 (R;DE)
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44365 (R;DE;In German)
Water Reactor Safety Research Division. Quarterly progress report, July 1-September 30, 1980, 10:44389 (R;US)
Hydrodynamics
Simulation of a BWR fuel bundle under small break conditions, 10:44340 (R;US)
Mass Transfer
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44364 (R;DE)
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44365 (R;DE;In German)
Pressure Gradients
Application of the coupled fluid-structure code PELE-IC to pressure-suppression analysis: annual report to NRC for 1979, 10:44374 (R;US)
Simulation
Experiment data report for LOFT nuclear small break experiment L3-5/L3-5A, 10:44385 (R;US)
Fabrication of sensors for high-temperature steam instrumentation systems, 10:44377 (R;US)
Nonlinear sensitivity and uncertainty analysis in support of the blowdown heat transfer program (Test 177 at Thermal-Hydraulic Test Facility), 10:44387 (R;US)
ORNL small-break LOCA heat transfer test series I: high-pressure reflood analysis, 10:44404 (R;US)
PWR Blowdown Heat Transfer Separate-Effects Program: Thermal-Hydraulic Test Facility experimental data report for test 161, 10:44370 (R;US)
PWR Blowdown Heat Transfer Separate-Effects Program: Thermal-Hydraulic Test Facility experimental data report for test 164R, 10:44371 (R;US)
PWR blowdown heat transfer separate-effects program: Thermal-Hydraulic Test Facility experimental data report for test 165, 10:44372 (R;US)
PWR blowdown heat transfer separate-effects program: Thermal-Hydraulic Test Facility experimental data report for test 171, 10:44369 (R;US)
Slab Core Test Facility steam supply design analysis with TRAC, 10:44397 (R;US)
Thermocouple signal sensitivity to the sheath thickness of thermal-hydraulic test facility indirectly heated electric fuel pin simulators, 10:44376 (R;US)
Test Facilities
Blowdown Heat Transfer Separate-Effects Program. Quarterly progress report, October-December 1980, 10:44401 (R;US)
Thermal-shock-resistant cermet insulators, 10:44409 (R;US)
Transient testing of an in-core impedance flow sensor in a 9-rod heated bundle, 10:44394 (R;US)
Two-phase flow measurements with advanced instrumented spool pieces, 10:44379 (R;US)
Thermal Stresses
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Two-Phase Flow
Two-phase flow measurements with advanced instrumented spool pieces, 10:44379 (R;US)
LOSS OF FLOW
Heat Transfer
Analysis of clad motion phenomena; application of the CMOT-II-code to clad melting experiments, 10:44362 (R;DE;In German)
Hydraulics
Analysis of clad motion phenomena; application of the CMOT-II-code to clad melting experiments, 10:44362 (R;DE;In German)
LOSS OF FLUID TEST REACTOR
See LOFT REACTOR
LOUISIANA
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
LOW-HEAD HYDROELECTRIC POWER PLANTS
Prior to August 1978 HYDROELECTRIC POWER PLANTS was used.
Energy Source Development
Let's cash crop the fence row and the water flow, 10:44139 (RA;US)
LOW-LEVEL RADIOACTIVE WASTES
Classification
Radionuclide correlations in low-level radwaste. Final report, 10:43858 (R;US)
Environmental Effects
Weldon Spring Site environmental monitoring report, calendar year 1984, 10:43888 (R;US)
Environmental Transport
Biotic transport of radionuclides from a low-level radioactive waste site, 10:45148 (J;US)
Marine Disposal
Method for the evaluation of radiologic consequence of the dumping of low- and medium-level radioactive wastes on the deep sea bed, 10:43895 (R;FR;In French)

Radioactivity in the ocean: laws and biological effects, 10:45175 (R;US)

Radiation Monitoring

Weldon Spring Site environmental monitoring report, calendar year 1984, 10:43888 (R;US)

Radioactive Waste Disposal

Impacts of atmospheric tritium releases from solid waste storage areas, 10:43856 (R;US)

Suggested state requirements and criteria for a low-level radioactive waste disposal site regulatory program, 10:43862 (R;US)

Summary of investigations carried out prior to 19 October 1984 regarding the location of the Vaalputs radioactive waste disposal site for the burial of intermediate and low-level waste, 10:43866 (R;ZA)

Radioactive Waste Storage

Bibliographic citations pertinent to the Weldon Spring Site, St. Charles County, Missouri, 10:43864 (R;US)

Summary of investigations carried out prior to 19 October 1984 regarding the location of the Vaalputs radioactive waste disposal site for the burial of intermediate and low-level waste, 10:43866 (R;ZA)

Solvent Extraction

Nuclear Technology Programs. Quarterly progress report, October-December 1984, 10:43887 (R;US)

LP-GAS

LUNGS

Biological Radiation Effects

Toxicity of inhaled $^{239}PuO_2$ in aged Beagle dogs. VI, 10:45235 (RA;US)

Dynamic Function Studies

[Effects of sulfur dioxide and respirable particulates on pulmonary function in human subjects], 10:45268 (R;US)

[Effects of sulfur dioxide and respirable particulates on pulmonary function in human subjects]. Progress report, January 1, 1981-December 31, 1981, 10:45267 (R;US)

Radiation Doses

Toxicity of inhaled $^{239}PuO_2$ in aged Beagle dogs. VI, 10:45235 (RA;US)

Radiation Injuries

Toxicity of inhaled $^{239}PuO_2$ in aged Beagle dogs. VI, 10:45235 (RA;US)

LUTETIUM 151

Proton Emission Decay

Proton radioactivity of ^{151}Lu and neighbouring nuclei, 10:45654 (RA;SU)

LUTETIUM HYDRIDES

Spin-Lattice Relaxation

Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of scandium, yttrium, lanthanum and lutetium, 10:44680 (J;CH)

LUTETIUM ISOTOPES

See also LUTETIUM 151

Properties of nuclei far from stability studied recently at the GSI on-line mass separator, 10:45642 (RA;SU)

LUTETIUM PHOSPHATES

Activation Analysis

Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

Crystal Field

Observation by EPR of trivalent hafnium in $LuPO_4$, YPO_4, and $ScPO_4$, 10:44725 (J;US)

Raman Spectroscopy

Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

X-Ray Diffraction

Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

LWR TYPE REACTORS

MACERALS

Alkylation

Analysis and characterization of chemically modified coal macerals using density gradient centrifugation, 10:43649 (R;US)

Centrifugation

Analysis and characterization of chemically modified coal macerals using density gradient centrifugation, 10:43649 (R;US)

Density

Analysis and characterization of chemically modified coal macerals using density gradient centrifugation, 10:43649 (R;US)

Electron Spin Resonance

Electron spin resonance of isolated coal macerals, 10:43650 (R;US)

Spin Echo

Electron spin resonance of isolated coal macerals, 10:43650 (R;US)

Structural Chemical Analysis

Characterization and reactivity of hydroxyls and ethers in coal macerals, 10:43647 (R;US)

MACHINING

Research Programs

Chip science: research on single-point machining, 10:44868 (RA;US)

MAGMAMAX PROCESS

See BINARY-FLUID SYSTEMS

MAGNESIUM

Neutron Reactions

Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range, 10:45612 (RA;JP;In Japanese)

Pionic Atoms

Anomalous strong interaction in pionic atoms of Mg and Al, 10:45358 (RA;DE)

Precision measurements of 3D-2P pionic X-rays in low-Z atoms, 10:45362 (RA;DE)

MAGNESIUM 24

High Spin States

High-spin states in ^{24}Mg, 10:45615 (J;GB)

MAGNESIUM 24 TARGET

Carbon 12 Reactions

Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)

Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)

Oxygen 18 Reactions

Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)

Proton Reactions

Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei, 10:45603 (R;FR)

MAGNESIUM 26 TARGET

Carbon 12 Reactions

Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)

Oxygen 18 Reactions

Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)

Proton Reactions
Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei, 10:45603 (R;FR)

Effect of pulsed irradiation on microstructural evolution, 10:44597 (R;US)
Fundamental aspects of ion beam surface modification: defect production and migration processes, 10:44653 (J;CH)
Plasticity
Development of material laws for high-temperature plasticity, 10:44604 (R;DE;In German)
Sorptive Properties
Angle dependence of the adsorption- and desorption probabilities of gases, 10:44605 (RA;AT;In German)
Surface Properties
Angle dependence of the adsorption- and desorption probabilities of gases, 10:44605 (RA;AT;In German)

Growth and breakdown of passive films on metal surfaces, 10:44290 (R;US)

METAMORPHISM
Pressure Dependence
Influence of CO_2 on melting of model granulite facies assemblages: a model for the genesis of charnockites, 10:45315 (J;US)

METEOROLOGY
Diffusion
Local scale atmospheric diffusion at a coastal site in the presence of breeze effect. (Phase III: Data elaboration and model development). Vol. 1, 10:45074 (R;XE)

METHANE
Air Pollution Monitoring
MIT two-wavelength laser system for measuring atmospheric methane, 10:45080 (R;US)
Biosynthesis
[Biomass digestion for family farms]. Final progress report, 10:43928 (R;US)
Development of biogas in Nepal: an analysis of the past and direction for the future, 10:43930 (R;NP)
Breakdown
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Chemical Reactions
Upper limit for the methane-oxygen initiation reaction in the presence of iodine-131 behind reflected shock waves, 10:44794 (D;US)
Detection
Detection of atmospheric methane using a two-wave length HeNe laser system, 10:43753 (R;US)
Detonation Limits
Determination of limits of flammability of gases and gas mixtures in air, 10:43761 (TG;GB)
Electron Attachment
Isotopic dependences of the dielectric strength of gases: new observations, classification, and possible origins, 10:45349 (R;US)
Measuring Instruments
MIT two-wavelength laser system for measuring atmospheric methane, 10:45080 (R;US)
Oxidation
Kinetic study of partial oxidation of methane with nitrous oxide on a molybdena-silica catalyst, 10:44810 (J;US)
Production
Anaerobic digestion of sugar cane wastes, 10:43927 (RA;US)
Methane digesters and cogeneration, 10:43922 (RA;US)
Radiolysis
Radiolysis of methane-ethylene and methane-ethane mixtures flow system induced by electron irradiation using none-recycling, 10:44836 (R;JP;In Japanese)
Recovery
Comparison of rotary and in-hole motor techniques for drilling horizontal boreholes in coal. Report of Investigations/1985, 10:43709 (R;US)
Synthesis
Development of water slurry gasification systems for high-moisture biomass, 10:43934 (R;US)
Uses
Methane digesters and cogeneration, 10:43922 (RA;US)

METHANOL
Carbonylation
Chemical raw materials from coal; development of a process for the production of higher oxygen-containing compounds from methanol - laboratory stage, 10:43942 (R;DE;In German)

METHOXYBENZENE
See ANISOLE

METHYL ALCOHOL
See METHANOL

METHYL IODIDE
Chemical Preparation
Upper limit for the methane-oxygen initiation reaction in the presence of iodine-131 behind reflected shock waves, 10:44794 (D;US)
Dissociation
Energy partitioning in elementary gas phase reactions. Progress report, April 1, 1983-August 31, 1985, 10:44773 (R;US)
Photochemistry
Radiation chemistry of hydrocarbon and alkyl halide systems. Interim progress report, June 1, 1984-July 31, 1985, 10:44834 (R;US)

ISRAEL
TURKEY
International Relations
Japan and the Middle East in alliance politics. Conference report, 10:44476 (R;US)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY FACILITIES
Buildings
Field and wind-tunnel testing on natural-ventilation cooling effects on three Navy buildings. Final report, October 1982-September 1983, 10:44521 (R;US)
Measuring thermal performance of building envelopes: nine case studies, 10:44522 (R;US)
Laboratory Buildings
Evaluation of a commercially available single building EMCS (energy monitoring control system). Final report, October 1981-September 1984, 10:44520 (R;US)
MILITARY PERSONNEL
Radiation Doses
Report of Project 1-M-54 on thirty service men exposed to residual radiation at Operation castle, 10:45065 (R;US)
MILK
Radiation Monitoring
Environmental radioactivity at the National Nuclear Research Centre, Pelindaba. Report for the year 1983, 10:45178 (R;ZA)
Radioactivity
Environmental radioactivity at the National Nuclear Research Centre, Pelindaba. Report for the year 1983, 10:45178 (R;ZA)
MILKY WAY
Gamma Astronomy
Coded aperture imaging system optimized for hard x-ray and gamma ray astronomy, 10:45333 (R;US)
MILLET
Morphology
Morphological and fertility responses in isogenic triploid and hexaploid pearl millet x napiergrass hybrids (Pennisetum americanum (L.) Leeke; Pennisetum purpureum Schum), 10:45214 (J;US)
MIM JUNCTIONS
Metal-Insulator-Metal Junctions.
Electron Spectroscopy
Observation of adsorbate-induced surface states by elastic electron tunneling spectroscopy, 10:44916 (J;US)
Electronic Structure
Observation of adsorbate-induced surface states by elastic electron tunneling spectroscopy, 10:44916 (J;US)
Sorptive Properties
Observation of adsorbate-induced surface states by elastic electron tunneling spectroscopy, 10:44916 (J;US)
Tunnel Effect
Observation of adsorbate-induced surface states by elastic electron tunneling spectroscopy, 10:44916 (J;US)
MINE-MOUTH GENERATING PLANTS

MOLECULES
MOLECULES
Photochemical Reactions
Radiative-augmented combustion. Annual report No. 1, 15 July 1983-14 July 1984, 10:44554 (R;US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Oxidizers
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1984, 10:44516 (R;US)
Performance
Parameteric analysis of a 6500-Btu/kWh heat rate dispersed generator. Final report, 10:44517 (R;US)
Performance Testing
Evaluation of natural-gas molten-carbonate power plants. Final technical report, January 11, 1982-October 31, 1984, 10:44518 (R;US)
Poisoning
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1984, 10:44516 (R;US)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALTS
Corrosive Effects
Corrosion of materials in molten alkali carbonate salt at 900 degrees C, 10:44023 (R;US)
MOLYBDENUM
Catalytic Effects
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Procedure for the hydrodesulphurisation of a gas containing oxygen and organic sulphur compounds, 10:43750 (TG;GB)
Deformation
TEM studies of crack tip deformation in bcc molybdenum at low temperatures, 10:44588 (R;US)
Emission Spectroscopy
Spectrographic analysis of stainless steels, 10:44746 (R;BR;In Portuguese)
Evaporation
Correlation of experimental and theoretical results for vaporization by simulated disruption, 10:45888 (J;NL)
Fracture Properties
TEM studies of crack tip deformation in bcc molybdenum at low temperatures, 10:44588 (R;US)
Hadronic Atoms
First observation of the nuclear E2-resonance effect in antiprotonic molybdenum, 10:45433 (RA;DE)
Neutron Reactions
Measurements of total cross sections of molybdenum and cadmium in the 20-1100 keV range on neutron filtered beam, 10:45649 (R;SU;In Russian)
Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range, 10:45612 (RA;JP;In Japanese)
Sputtering
Calculation of molybdenum sputtering from the limiter in Alcator C, 10:45883 (J;NL)
MOLYBDENUM 94
Spherical Model
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
Strength Functions
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
MOLYBDENUM 94 TARGET
Zirconium 90 Reactions
Cold fusion in symmetric ^{90}Zr induced reactions, 10:45629 (R;DE;In German)
MOLYBDENUM ALLOYS
See also ALLOY-A-286
INCONEL 718
STAINLESS STEEL-316

STAINLESS STEEL-Z6CND17-12
STEEL-DIN-1-4919
Mechanical Properties
Armor - preliminary study of the effect of several alloying elements and addition agents upon the metallurgical properties of manganese-molybdenum steel used in armor, 10:44579 (R;US)
Physical Properties
Armor - preliminary study of the effect of several alloying elements and addition agents upon the metallurgical properties of manganese-molybdenum steel used in armor, 10:44579 (R;US)

MOLYBDENUM ISOTOPES
See also MOLYBDENUM 94
Neutron Reactions
Neutron activation cross section of molybdenum isotope at 14.8 MeV, 10:45637 (RA;JP;In Japanese)
Radioactivation
Neutron activation cross section of molybdenum isotope at 14.8 MeV, 10:45637 (RA;JP;In Japanese)

MOLYBDENUM OXIDES
Catalytic Effects
Kinetic study of partial oxidation of methane with nitrous oxide on a molybdena-silica catalyst, 10:44810 (J;US)
Crystal Structure
Physical properties of transition metal chalcogenides, 10:44708 (RA;AT;In German)
Electric Conductivity
Physical properties of transition metal chalcogenides, 10:44708 (RA;AT;In German)
Thermoelectric Properties
Physical properties of transition metal chalcogenides, 10:44708 (RA;AT;In German)

MONTANA
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
Environmental Quality
Wildlife impact assessment and summary of previous mitigation related to hydroelectric projects in Montana. Phase 1. Volume Two(b). Clark Fork River Projects: Cabinet Gorge and Noxon Rapids Dams. Final report, 10:45187 (R;US)
Rivers
Cumulative effects of micro-hydro development on the fisheries of the Swan River Drainage, Montana. Volume II. Technical information. Final report, 1985, 10:43972 (R;US)
Terrestrial Ecosystems
Wildlife impact assessment and mitigation summary: Montana Hydroelectric Projects. Volume I. Libby Dam. Final report, 10:43956 (R;US)
Water Reservoirs
Effects of water levels on productivity of Canada geese in the northern Flathead Valley. Annual report 1984, 10:43970 (R;US)
Wildlife impact assessment and summary of previous mitigation related to hydroelectric projects in Montana, Phase I. Volume IIA. Clark Fork projects: Thompson Falls Dam. Final report, 10:43957 (R;US)

MUCOPOLYSACCHARIDES
Neutron Diffraction
Small-angle neutron scattering studies from solutions of bovine nasal cartilage proteoglycan, 10:45193 (R;US)

MULE DEER
See DEER

MULTIPARTICLE SPECTROMETERS
Design
Forward spectrometer of the Fermilab colliding detector facility, 10:45033 (J;US)
Operation
Forward spectrometer of the Fermilab colliding detector facility, 10:45033 (J;US)

MULTIPROCESSORS
See ARRAY PROCESSORS

MULTIVARIATE ANALYSIS
Multivariable systems analysis and design, 10:44869 (RA;US)

MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS

MUNICIPAL WASTES
Combustion
Rehabilitating the Tampa municipal incinerator to a refuse-to-energy facility, 10:43948 (RA;US)
Combustion Products
Statistical analysis of properties, combustion products, and emissions from combustion of municipal solid waste, 10:43950 (RA;US)
Energy Recovery
Solid waste processing for the recovery of secondary materials and energy, 10:43951 (RA;US)
Sumner County solid-waste energy recovery facility. Volume 1. Feasibility studies, design, and construction. Final report, 10:43954 (R;US)
Gasification
Engineering assessment of thermal gasification systems for municipal solid wastes, 10:43925 (RA;US)
Ground Disposal
Sludge application program at the Savannah River Plant, 10:45150 (R;US)
Materials Recovery
Solid waste processing for the recovery of secondary materials and energy, 10:43951 (RA;US)
Waste Processing
Solid waste processing for the recovery of secondary materials and energy, 10:43951 (RA;US)

MUNITIONS
See ORDNANCE

MUON BEAMS
Beam Monitoring
Absolute calibration of the solid state detectors in the narrow band neutrino beam at CERN, 10:45023 (R;NL)

MUON DETECTION
Radiation Detectors
University of Illinois elementary particle physics research, MKIII Muon Detector components (Engineering Materials), 10:45010 (E;US)

MUON PAIRS
Particle Production
Experimental review of some predictions of the Drell Yan model in hadroproduction of dimuons, 10:45450 (RA;PL)

MUON PROBES
Principles of μSR technics, 10:45742 (R;FR;In French)

MUON REACTIONS
Breakup Reactions
Nuclear muon capture by deuterons, 10:45356 (RA;DE)
Multiple Scattering
Multiple Coulomb scattering of 7.3 and 11.7 GeV/c muons on Cu target, 10:45622 (R;SU;In Russian)

MUON-CATALYZED FUSION
Cycle-by-cycle analysis of muon catalysed fusion in a one-component medium, 10:45593 (R;SU)
Determination of the multiple muon catalysis process parameters, 10:45592 (R;SU)
Determination of parameters of the muon catalysis process from thee analysis of experimental time distribution of successively detected events of fusion reactions, 10:45594 (R;SU;In Russian)
Determination of optimal conditions for the experimental investigation of muon catalysis of nuclear reaction $t+t \rightarrow {}^4He+2n$, 10:45591 (R;SU)
Successively detected events of the multiple muon catalysis process, 10:45596 (R;SU;In Russian)

MUONIC ATOMS
Atom-Atom Collisions
Search for delayed photons from 2S-muonic He at 40 atmospheres, 10:45379 (RA;DE)

Atom-Molecule Collisions
Recent calculations of muon-catalyzed d-t fusion, 10:45380 (RA;DE)
De-Excitation
New evaluation of muonic X-ray energies in 208-lead, 10:45364 (RA;DE)
Precision measurement of the 2P-1S transition wave length in muonic ^{13}C, 10:45363 (RA;DE)
Hyperfine Structure
Neutral muonic helium (3), 10:45366 (RA;DE)
New experimental results on hyperfine transitions in muonic hydrogen isotopes, 10:45369 (RA;DE)
Ion-Atom Collisions
Scattering cross sections of muonic hydrogen atoms on hydrogen isotope nuclei, 10:45381 (RA;DE)
Muon Reactions
Nuclear muon capture by deuterons, 10:45356 (RA;DE)
X-Ray Spectra
Methods for measuring the muon capture ratio A(H/Z) in a H_3+Z gas mixture, 10:45382 (RA;DE)
Pionic and muonic X-ray studies of ^{237}Np, 10:45359 (RA;DE)

MUONIC IONS
De-Excitation
Measurement of the lifetime and quenching rate of metastable 2S muonic helium ions, 10:45368 (RA;DE)

MUONIC MOLECULES
Atom-Molecule Collisions
Muon transfer rate from hydrogen to argon, 10:45378 (RA;DE)
Energy Levels
Relativistic corrections to the energy levels of $dd\mu$ and $dt\mu$ muonic molecules, 10:45377 (RA;DE)
Excited States
High accuracy calculations of energy levels of exited states of $dd\mu$- and $dt\mu$-mesic molecules, 10:45376 (RA;DE)
Strong Interactions
Possible influence of the strong interaction on the mesomolecular system properties, 10:45375 (RA;DE)
Three-Body Problem
Application of the Faddeev-Hahn equations to the mesomolecular system calculation, 10:45374 (RA;DE)

MUONIUM
Lamb Shift
Measurement of the Lamb shift in muonium, 10:45365 (RA;DE)
Muonium Lamb shift, 10:45367 (RA;DE)

MUON-PROTON INTERACTIONS
Charged-Current Interactions
Hard meson corrections to the radiative muon capture amplitude, 10:45478 (RA;DE)

MUONS
See also MUONS MINUS
MUONS PLUS
Gyromagnetic Ratio
Possible higher precision measurement of the muon G-2 value, 10:45486 (RA;DE)
Leptonic Decay
Progress report on recent rare muon decay experiments at the Los Alamos Meson Physics Facility, 10:45428 (RA;DE)
Radiative Decay
Progress report on recent rare muon decay experiments at the Los Alamos Meson Physics Facility, 10:45428 (RA;DE)

MUONS MINUS
Leptonic Decay
Search for right-handed currents in muon decay, 10:45423 (RA;DE)
Particle Production
Prompt single muon production by protons on iron, 10:45446 (RA;PL)

MUONS PLUS
Leptonic Decay
Measurement of the eta parameter in muon decay, 10:45424 (RA;DE)
Search for the decay $\mu^- > 3e$, 10:45427 (RA;DE)
Particle Production
Prompt single muon production by protons on iron, 10:45446 (RA;PL)
Spectroscopy
Principles of μSR technics, 10:45742 (R;FR;In French)

MUSCOVITE
Absorption Spectra
Polarized optical absorption and ^{57}Fe Moessbauer study of pegmatitic muscovite, 10:45312 (J;US)
Crystal Structure
Crystal structure of a pink muscovite from Archer's Post, Kenya: implications for reverse pleochroism in dioctahedral micas, 10:45313 (J;US)
Optical Properties
Crystal structure of a pink muscovite from Archer's Post, Kenya: implications for reverse pleochroism in dioctahedral micas, 10:45313 (J;US)

MUTAGENESIS
Correlations
Electron reactions in model and biological systems, 10:45261 (R;US)

MUTAGENS

N

NAC CYCLOTRON
Separated sector cyclotron of the National Accelerator Centre, Faure, Republic of South Africa.
Buildings
Buildings, 10:44982 (RA;ZA)
CAMAC System
Control system, 10:44981 (RA;ZA)
Cooling Systems
Mechanical engineering, 10:44863 (RA;ZA)
On-Line Control Systems
Control system, 10:44981 (RA;ZA)
Operation
Pretoria Cyclotron Group, 10:44986 (RA;ZA)
Specifications
Separated-sector cyclotron, 10:44984 (RA;ZA)

NACSSC
See NAC CYCLOTRON

NAGASAKI
Radiation Doses
Calculation and interpretation of in situ measurements of initial radiations at Hiroshima and Nagasaki, 10:45255 (BA;JP)

NAI DETECTORS
Neutron Beams
Collisions of neutrons and of gamma rays in $Bi_4Ge_3O_{12}$ (BGO) and NaI(Tl) scintillation detectors, 10:45006 (R;CA)
Sample Changers
Automatic sample changer for gamma spectrometry, 10:45021 (R;GB)

NAL SYNCHROTRON
See FERMILAB ACCELERATOR

NAPHTHALENE
Solubility
Transport and relaxation processes in supercritical fluids. Technical progress report, April 1, 1985-June 30, 1985, 10:43625 (R;US)

NAPHTHENES
See CYCLOALKANES

NATIONAL ACCELERATOR LABORATORY
See FERMILAB ACCELERATOR

NATIONAL DEFENSE
Target vulnerability to air defense weapons. Master's thesis, 10:45052 (R;US)

NATO
North Atlantic Treaty Organization.

International Relations
Soviet campaign against INF (intermediate-range nuclear forces): strategy, tactics, means. Interim report, 10:44466 (R;US)

NATURAL GAS
See also LIQUEFIED NATURAL GAS
Evaluation of natural-gas molten-carbonate power plants. Final technical report, January 11, 1982-October 31, 1984, 10:44518 (R;US)
Integrated gas-fired space-heating/water-heating system with electric air conditioning. Annual report, January 1984-December 1984, 10:44550 (R;US)
Chemical Analysis
Analyses of natural gases, January 1, 1917-December 31, 1984. Data file, 10:43760 (R;US)
Data Compilation
State Energy Overview 1983, 10:44506 (R;US)
Desulfurization
Procedure for the hydrodesulphurisation of a gas containing oxygen and organic sulphur compounds, 10:43750 (TG;GB)
Process for the removal of CO_2 and possibly H_2S from natural gases, 10:43749 (TG;GB)
Hydrogenation
Procedure for the hydrodesulphurisation of a gas containing oxygen and organic sulphur compounds, 10:43750 (TG;GB)
Processing
Process for the removal of CO_2 and possibly H_2S from natural gases, 10:43749 (TG;GB)
Socio-Economic Factors
Energy policy project: petroleum and natural gas in Egypt. Final report, 10:43740 (R;US)
Storage
Lowering storage losses of volatile hydrocarbons by adsorption, 10:43743 (R;FR;In French)

NATURAL GAS APPLIANCES
See GAS APPLIANCES

NATURAL GAS DEPOSITS
Exploration
Frontiers for petrophysics and borehole log analysis, 10:43714 (RA;US)
Greenland
Project EASTMAR. Final report, 10:43710 (R;DK)
Magnetic Surveys
Project EASTMAR. Final report, 10:43710 (R;DK)

NATURAL GAS DISTRIBUTION SYSTEMS
Environmental Impacts
AVL-1 Pipeline Project. Environmental assessment: Tennessee Gas Pipeline Company (Docket No. CP84-441-002), 10:43755 (R;US)
Pipelines
AVL-1 Pipeline Project. Environmental assessment: Tennessee Gas Pipeline Company (Docket No. CP84-441-002), 10:43755 (R;US)
Transport
DCQ Pipeline Project. Environmental assessment: Texas Eastern Transmission Corporation, Algonquin Gas Transmission Company (Docket Nos. CP84-429-001 and CP84-654-001), 10:43756 (R;US)

NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS

NATURAL GAS INDUSTRY
Taxes
Analysis of the impacts of the President's tax proposal on major sectors of the energy industry, 10:44478 (R;US)

NATURAL GAS WELLS
Formation Damage
Improvements in stimulation technology, 10:43757 (RA;US)
Hydraulic Fracturing
Improvements in stimulation technology, 10:43757 (RA;US)
Information Systems
Development and maintenance of data bases, 10:43758 (RA;US)
Sampling
Downhole fluid sampler for geopressured gas wells, 10:43748 (RA;US)
Well Logging
Development and maintenance of data bases, 10:43758 (RA;US)
Well Stimulation
Development and maintenance of data bases, 10:43758 (RA;US)

NATURAL URANIUM
Fluorescence Spectroscopy
Measurement of natural uranium in urine by fluorometry, 10:44735 (R;CA)

NEBRASKA
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)

NEGATONS
See ELECTRONS

NEGATRONS

NEODYMIUM 144
Energy-Level Transitions
Level scheme of ^{144}Nd from the (n,2γ) reaction, 10:45650 (R;SU;In Russian)

NEODYMIUM LASERS
Frequency Converters
Thin-thick quadrature frequency conversion, 10:45861 (R;US)
Optical Systems
Thin-thick quadrature frequency conversion, 10:45861 (R;US)

NEODYMIUM PHOSPHATES
Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
Raman Spectroscopy
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
X-Ray Diffraction
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

NEON
Atom-Atom Collisions
Study of interference effects in Na(3S,3P)-Ne, Ar scattering experiments at high angular resolution, 10:45385 (R;NL)
Thermal Diffusivity
Noble gas-carbon dioxide thermal diffusion factors: anomalous behavior for Ar/CO_2, 10:44782 (R;US)

NEON 19
Beta-Plus Decay
Time-reversal-violating effects in semileptonic decays in SU(2)sub(L) x SU(2)sub(R) x U(1) electroweak models, 10:45481 (RA;DE)

NEON 20
Asymmetry
Influence of left right asymmetry degrees of freedom in self-consistent calculation of ^{20}Ne, 10:45704 (R;FR)

NEON 20 REACTIONS
Inclusive Interactions
Particle production from a condensing quark-gluon plasma, 10:45493 (RA;DE)

NEON 20 TARGET
Electron Reactions
Study of form factors of elastic and inelastic electron scattering by ^{20}Ne, 10:45611 (R;SU)
Proton Reactions
Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei, 10:45603 (R;FR)

NEON 22 REACTIONS
Spallation
Free path length of neon-22 fragments in photoemulsion at 4.1 A GeV/c momentum and anomalon problem, 10:45614 (R;SU;In Russian)

NEOPLASMS
See also CARCINOMAS
Risk Assessment
Extrapolation to health risk: use of comparative approaches, 10:43676 (BA;US)

NEPAL
Synthetic Fuels
Development of biogas in Nepal: an analysis of the past and direction for the future, 10:43930 (R;NP)
NEPTUNIUM
Geochemistry
Neptunium and technetium behavior in geological systems, 10:43861 (RA;US)
Muonic Atoms
Pionic and muonic X-ray studies of ^{237}Np, 10:45359 (RA;DE)
Pionic Atoms
Pionic and muonic X-ray studies of ^{237}Np, 10:45359 (RA;DE)
NEPTUNIUM 237
Diffusion
Geochemical sensitivity analysis for performance assessment of HLW repositories: effects of speciation and matrix diffusion, 10:43892 (R;US)
NEPTUNIUM 237 TARGET
Fast Fission
Measurement of fast neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am, 10:45671 (RA;JP;In Japanese)
Neutron Reactions
Measurement of fast neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am, 10:45671 (RA;JP;In Japanese)
NEPTUNIUM COMPLEXES
Entropy
Assessment of the thermodynamic behaviour of neptunium in water and model groundwaters from 25 to 150 degrees C, 10:44838 (R;CA)
Formation Free Enthalpy
Assessment of the thermodynamic behaviour of neptunium in water and model groundwaters from 25 to 150 degrees C, 10:44838 (R;CA)
NEPTUNIUM COMPOUNDS
Chemical Reaction Kinetics
Microcalorimetric measurement of reaction enthalpies in solutions of uranium and neptunium compounds, 10:44727 (J;NL)
Formation Heat
Microcalorimetric measurement of reaction enthalpies in solutions of uranium and neptunium compounds, 10:44727 (J;NL)
NETHERLANDS
Energy Models
Energy modelling with multiple objectives and multiple actors, 10:44456 (R;NL)
NEUTRAL BEAM SOURCES
Beam Neutralization
ATSU Point Design (gasdynamics), 10:45395 (R;US)
Gas cell neutralizers (Fundamental principles), 10:45394 (R;US)
NEUTRAL-PARTICLE TRANSPORT
See also PHOTON TRANSPORT
Computerized Simulation
Monte Carlo simulation of the ISX pumped limiter, 10:45875 (J;NL)
NEUTRINO OSCILLATION
Neutrino oscillations - present and future experiments, 10:45447 (RA;PL)
NEUTRINO REACTIONS
Inelastic Scattering
Neutron and proton structure functions from inelastic antineutrino scattering in deuterium, 10:45448 (RA;PL)
NEUTRINO-NUCLEON INTERACTIONS
Structure Functions
What can we learn from structure functions measured in neutrino interactions, 10:45444 (RA;PL)
NEUTRINOS
See also COSMIC NEUTRINOS
ELECTRON NEUTRINOS
Configuration Mixing
Search for exotic particles in the decay of K^+, 10:45426 (RA;DE)
NEUTRON ABSORBERS
See also BURNABLE POISONS
Service Life
Irradiation behavior of neutron absorber materials in Combustion Engineering's burnable poison and control elements, 10:44223 (RA;US)
Swelling
Irradiation behavior of neutron absorber materials in Combustion Engineering's burnable poison and control elements, 10:44223 (RA;US)
NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS
NEUTRON BEAMS
Collisions
Collisions of neutrons and of gamma rays in $Bi_4Ge_3O_{12}$ (BGO) and NaI(Tl) scintillation detectors, 10:45006 (R;CA)
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON CHOPPERS
Magnetic Bearings
Neutron chopper development at LANSCE, 10:45583 (R;US)
Speed Regulators
Neutron chopper development at LANSCE, 10:45583 (R;US)
NEUTRON DETECTION
Liquid Scintillation Detectors
Efficiency of neutron detection by the system of liquid scintillation counters. Calculation program for neutron transport with $E < 20$ MeV, 10:45025 (R;SU;In Russian)
Response Functions
Some modelisation aspects of the instrumental transformation of neutron kinetic energy into electrical impulse amplitude, 10:45722 (R;FR;In French)
NEUTRON DIFFRACTION
Absorption
Absorption factor tables for x-ray and neutron scattering in cylindrical samples, 10:45718 (R;CA)
Computer Codes
Interactive FORTRAN program for the evaluation of structure factors and pair distribution functions from neutron diffraction experiments, 10:45725 (R;DE)
Small Angle Scattering
National facility for small-angle neutron scattering: five years' operating experience. Draft, 10:44323 (R;US)
NEUTRON DIFFUSION EQUATION
Benchmarks
Benchmarks with diffusion theory and transport theory, 10:45724 (R;BR;In Portuguese)
NEUTRON DOSIMETRY
Quick evaluation of the neutron dose following a criticality accident by measurement of sodium 24 activity, 10:45737 (R;FR;In French)
Dose Equivalents
Dosimetric quantities in the ICRU sphere for neutron irradiation with energies between thermal and 20 MeV, 10:45741 (R;DE)
NEUTRON ECONOMY
See NEUTRON FLUX
NEUTRON EMISSION
Nonequilibrium processes in neutron emission from helium, lithium-6 and carbon ion reactions. Analysis of experimental data, 10:45599 (R;SU;In Russian)
NEUTRON EVAPORATION
See NEUTRON EMISSION
NEUTRON FLUX
Computer Codes
FURNACE; a toroidal geometry neutronic program system method description and users manual, 10:45842 (R;NL)
NEUTRON FLUX DENSITY
See NEUTRON FLUX
NEUTRON LOGGING
Determination of thermal neutron cross sections for the calibration of porosity logs, 10:43715 (RA;US)
Experimental basis for a new borehole corrected pulsed neutron capture logging system (TMD), 10:43712 (RA;US)
NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON MONITORS
Evaluation
Data/evaluation for operator-inspector differences for a specific NDA instrument, 10:44753 (R;XE)
NEUTRON REACTIONS
Continuum spectra in proton- and neutron-induced reactions, 10:45580 (RA;XA)
Capture
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)
Charge Exchange
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Comparative Evaluations
Reviews of the simultaneous evaluation and evaluated covariance matrices for the cross sections on heavy nuclides, 10:45577 (RA;JP;In Japanese)
Compound-Nucleus Reactions
Neutron activation cross section of molybdenum isotope at 14.8 MeV, 10:45637 (RA;JP;In Japanese)
Problem of low energy neutron inelastic scattering on the ^{152}Sm nucleus, 10:45655 (R;SU;In Russian)
Cross Sections
Evaluation of nuclear data and their uncertainties, 10:45570 (RA;XA)
Evaluation of neutron nuclear data for ^{246}Cm and ^{247}Cm, 10:45678 (R;JP)
Introduction to nuclear cross section measurement for evaluators fission cross section, 10:45581 (RA;JP;In Japanese)
Measurements of the gamma-ray production cross section at Tohoku University, 10:45672 (RA;JP;In Japanese)
Differential Cross Sections
Measurements of double differential cross sections (DDX) for several medium-weight and heavy nuclei at 15 MeV, 10:45636 (RA;JP;In Japanese)
Direct Reactions
Problem of low energy neutron inelastic scattering on the ^{152}Sm nucleus, 10:45655 (R;SU;In Russian)
Elastic Scattering
Differential neutron scattering cross sections and average neutron parameters of cadmium isotopes, 10:45648 (R;SU;In Russian)
Fast Fission
Measurement of fast neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am, 10:45671 (RA;JP;In Japanese)
Fission
Introduction to nuclear cross section measurement for evaluators fission cross section, 10:45581 (RA;JP;In Japanese)
Gamma Spectroscopy
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)
Information Needs
Nuclear data for fission reactor core design and safety analysis: Requirements and status of accuracy of nuclear data, 10:45670 (RA;XA)
Knock-Out Reactions
Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University, 10:45604 (RA;JP;In Japanese)
Nuclear Data Collections
Evaluation of gamma-ray production cross sections, 10:45578 (RA;JP;In Japanese)
Reviews of the simultaneous evaluation and evaluated covariance matrices for the cross sections on heavy nuclides, 10:45577 (RA;JP;In Japanese)
Nuclear Models
Nuclear reaction models newly adopted in JENDL-3 evaluation (Japanese Evaluated Nuclear Data Library-version 3), 10:45634 (RA;JP;In Japanese)
Pickup Reactions
Deuteron exchange mechanism for ^{6}Li(n,α), 10:45600 (RA;XA)
Polarized Beams
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Potential Scattering
Differential neutron scattering cross sections and average neutron parameters of cadmium isotopes, 10:45648 (R;SU;In Russian)
Resonance
Accurate determination of the parameters of the 292.4-eV resonance of ^{91}Zr and the 301.1-eV resonance of ^{96}Zr, 10:45628 (R;US)
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)
Total Cross Sections
Measurements of total cross sections of molybdenum and cadmium in the 20-1100 keV range on neutron filtered beam, 10:45649 (R;SU;In Russian)
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)
Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range, 10:45612 (RA;JP;In Japanese)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Thermal neutron source study, 10:45717 (R;CA)
NEUTRON SPECTROSCOPY
Reviews
Notes from impressions talk given at closing session of high energy excitations in condensed matter workshop, 10:45734 (RA;US)
NEUTRON THERAPY
NAC Cyclotron
Medical component, 10:44985 (RA;ZA)
Pretoria Cyclotron Group, 10:44986 (RA;ZA)
Side Effects
Therapeutic dosimetry for Cf-252 neutron brachytherapy of pelvic cancer, 10:45252 (J;US)
NEUTRON TRANSPORT THEORY
Benchmarks
Benchmarks with diffusion theory and transport theory, 10:45724 (R;BR;In Portuguese)
Numerical Solution
Transport equation solving methods, 10:45721 (R;FR;In French)
NEUTRON-RICH ISOTOPES
Beta-Minus Decay
Decay studies of neutron-rich isotopes of manganese, iron, cobalt, nickel, copper and zinc, 10:45621 (R;DE)
De-Excitation
Decay studies of neutron-rich isotopes of manganese, iron, cobalt, nickel, copper and zinc, 10:45621 (R;DE)
Reviews
Investigation of new neutron-rich isotopes at the GSI on-line mass separator, 10:45667 (R;DE)
NEUTRONS
Deep Inelastic Scattering
Measurement of momentum distributions in solids using deep inelastic neutron scattering, 10:45729 (RA;US)
Momentum distribution of light atoms by deep inelastic neutron scattering, 10:45730 (RA;US)
Inelastic Scattering
High energy phonons: overview, 10:45731 (RA;US)
Internal vibrations in molecular crystals, 10:45391 (RA;US)
Introduction to electronic excitations, 10:45386 (RA;US)
Momentum distributions, 10:45728 (RA;US)
Neutron inelastic scattering from mixed valence materials, 10:45726 (RA;US)
Neutron scattering, electronic excitations and chemical reactions, 10:45733 (RA;US)
Scattering of electron-volt neutrons by light and heavy water, 10:45732 (RA;US)

Theoretical study of neutron scattering cross sections in semiconductors, 10:45727 (RA;US)
Semileptonic Decay
Time-reversal-violating effects in semileptonic decays in SU(2)sub(L) x SU(2)sub(R) x U(1) electroweak models, 10:45481 (RA;DE)
Structure Functions
Neutron and proton structure functions from inelastic antineutrino scattering in deuterium, 10:45448 (RA;PL)
NEUTROPHILS
Protein Structure
Characterization of two crystal forms of neutrophil cationic protein NP2, a naturally occurring broad-spectrum antimicrobial agent from leukocytes, 10:45194 (J;GB)
NEVADA
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
Lithology
Geology of drill hole USW VH-2, and structure of Crater Flat, southwestern Nevada, 10:43882 (R;US)
Stratigraphy
Geology of drill hole USW VH-2, and structure of Crater Flat, southwestern Nevada, 10:43882 (R;US)
NEVADA TEST SITE
Shaft Excavations
Structural analysis of the NNWSI Exploratory Shaft, 10:43874 (R;US)
NEW ENGLAND
See FEDERAL REGION I
NEW HAMPSHIRE
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
NEW JERSEY
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
NEW MEXICO
Desalination Plants
Southwest region solar pond study for three sites: Tularosa Basin, Malaga Bend, and Canadian River, 10:44019 (R;US)
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
Salinity Gradient Power Plants
Southwest region solar pond study for three sites: Tularosa Basin, Malaga Bend, and Canadian River, 10:44019 (R;US)
NEW YORK
See also NEW YORK CITY
Biomass
Identifying aboveground wood fiber potentials in New York state. Forest Service resource bulletin, 10:44006 (R;US)
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
Wood Fuels
Identifying aboveground wood fiber potentials in New York state. Forest Service resource bulletin, 10:44006 (R;US)
NEW YORK CITY
Electric Utilities
Technical/economic impacts and implications of using washed coals at New York State utilities. Final report, 10:43693 (R;US)
NEWTON MECHANICS
See CLASSICAL MECHANICS
NICKEL
Adsorption
Surface vibrational spectroscopy, 10:45388 (RA;US)
Catalytic Effects
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Procedure for the hydrodesulphurisation of a gas containing oxygen and organic sulphur compounds, 10:43750 (TG;GB)
Electron Collisions
Surface vibrational spectroscopy, 10:45388 (RA;US)
Emission Spectroscopy
Spectrographic analysis of stainless steels, 10:44746 (R;BR;In Portuguese)
Evaporation
Correlation of experimental and theoretical results for vaporization by simulated disruption, 10:45888 (J;NL)
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Molecular Structure
Surface vibrational spectroscopy, 10:45388 (RA;US)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Solvent Extraction
Glycine enhanced separation of Co(II) and Ni(II) with bis(2,4,4-trimethylpentyl)phosphinic acid [Cyanex 272] by liquid-liquid extraction and supported liquid membranes, 10:44763 (J;US)
NICKEL 58
Excited States
Transversal E1-resonance in spherical nuclei, 10:45619 (R;SU;In Russian)
NICKEL 58 TARGET
Argon 40 Reactions
Contribution to very inelastic collisions. Emission mechanism of light charged particles and angular momentum transfer in ^{40}Ar (280 MeV) + ^{58}Ni nuclear reactions, 10:45617 (R;FR;In French)
Carbon 12 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
Electron Reactions
Transversal E1-resonance in spherical nuclei, 10:45619 (R;SU;In Russian)
Hadron Reactions
Isotopic and isotonic effect for nucleon production in deep inelastic nuclear reactions, 10:45601 (RA;DE)
Nitrogen 14 Reactions
Subthreshold pion production in nucleus-nucleus collisions what is the mechanism, 10:45682 (R;DE)
Oxygen 18 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
NICKEL 61 TARGET
Alpha Reactions
Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data, 10:45618 (R;SU;In Russian)
NICKEL 62 TARGET
Helium 3 Reactions
Study on the energy spectra of neutrons from the helium, lithium-6 and carbon ion reactions at energy of 4-20 MeV per nucleon with production of zinc-65 compound system. Experimental data, 10:45618 (R;SU;In Russian)
NICKEL 64 TARGET
Hadron Reactions
Isotopic and isotonic effect for nucleon production in deep inelastic nuclear reactions, 10:45601 (RA;DE)
NICKEL ALLOYS
See also ALLOY-A-286
CHROMIUM-NICKEL STEELS
INCOLOY ALLOYS
NICKEL BASE ALLOYS
Microstructure
Effect of boron on grain-broundaries in Ni3Al, 10:44654 (J;US)
Nickel oxide morphology in nickel-silica catalysts, 10:44575 (R;US)
Segregation
Quantitative interpretation of surface segregation in air-exposed intermetallic compounds: UNiAl as a test case, 10:44655 (J;CH)
Synthesis
Shock synthesis of nickel aluminides, 10:44641 (R;US)
NICKEL BASE ALLOYS
See also INCONEL ALLOYS

Explosive Forming
Mach stem characterization in Mbar designs using RSR powder, 10:44637 (R;US)
Microstructure
TEM-APFIM investigation of boron-doped Ni_3Al, 10:44589 (R;US)
Physical Radiation Effects
Ion mixing and radiation induced segregation in the Fe, Ni, Si system, 10:44581 (R;FR)

NICKEL BORIDES
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)

NICKEL OXIDES
Dislocations
Diffraction and microscopy studies of the structure of grain boundaries in Fe, Fe-base alloys and ceramic materials. Final technical report, 10:44598 (R;US)
Grain Boundaries
Diffraction and microscopy studies of the structure of grain boundaries in Fe, Fe-base alloys and ceramic materials. Final technical report, 10:44598 (R;US)

NICKEL PHOSPHIDES
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Moessbauer Effect
Anomalous behavior of the Moessbauer resonance width in mixed-valence $EuNi_2P_2$, 10:44673 (J;US)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)

NICKEL SULFATES
Carcinogen Screening
Studies on the tumor initiating, tumor promoting, and tumor co-initiating properties of respiratory carcinogens, 10:45259 (R;US)

NICKEL-ZINC BATTERIES
Electrodes
Reaction profiles in porous electrodes. Final report, 10:44447 (R;US)

NIOBIUM
Neutron Reactions
Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range, 10:45612 (RA;JP;In Japanese)
Shock Waves
Condensed matter at high shock pressures, 10:45401 (R;US)
Solubility
Behavior and mechanism of sorption of uranylperoxocarbonato-complexes on anion exchanger systems, 10:44845 (R;DE;In German)

NIOBIUM ADDITIONS
Metallurgical Effects
Armor - preliminary study of the effect of several alloying elements and addition agents upon the metallurgical properties of manganese-molybdenum steel used in armor, 10:44579 (R;US)

NIOBIUM ALLOYS

NOS. 5 AND 6 BURNER OILS
See RESIDUAL FUELS

NOSE CONES
Ultrasonic Waves
Ultrasonic longitudinal wave velocity in carbon-carbon Pitch and Pitch/M2 shape stable nosetip material from 70°F to 5400°F, 10:44578 (R;US)

NOVA FACILITY
Construction
Novette facility: activation and experimental results, 10:45862 (J;GB)
Design
Novette facility: activation and experimental results, 10:45862 (J;GB)
Neodymium Lasers
Novette facility: activation and experimental results, 10:45862 (J;GB)
Performance Testing
Novette facility: activation and experimental results, 10:45862 (J;GB)

N*RESONANCES
Electroproduction
Electron and pion interactions with nuclei. Progress report, August 1, 1984-August 1, 1985, 10:45421 (R;US)

NRX REACTOR
Reactor Control Systems
Reassessment of the control system of the NRX research reactor, 10:44309 (R;CA)

NUCLEAR ACCIDENTS
See ACCIDENTS

NUCLEAR ATTACKS
See NUCLEAR WEAPONS

NUCLEAR CONTROVERSY
See HUMAN POPULATIONS

NUCLEAR DATA COLLECTIONS
Nuclear data in the intermediate energy region. Yield and transport of spallation neutrons, 10:45635 (RA;JP;In Japanese)
Nuclear reaction models newly adopted in JENDL-3 evaluation (Japanese Evaluated Nuclear Data Library-version 3), 10:45634 (RA;JP;In Japanese)
Reviews
Introduction to the content of the major available evaluated nuclear data libraries, 10:45571 (RA;XA)
Sensitivity Analysis
Review of the theory of sensitivity and uncertainty analysis, 10:45576 (RA;JP;In Japanese)

NUCLEAR EMULSIONS
Neon 22 Reactions
Free path length of neon-22 fragments in photoemulsion at 4.1 A GeV/c momentum and anomalon problem, 10:45614 (R;SU;In Russian)

NUCLEAR EXPLOSION DETECTION
Altitude
High-altitude NuDet phenomenology. Quarterly report, 1 February 1985-30 April 1985, 10:45062 (R;US)
Computerized Simulation
High-altitude NuDet phenomenology. Quarterly report, 1 February 1985-30 April 1985, 10:45062 (R;US)
Travelling Ionospheric Disturbance
Remote sensing of traveling ionospheric disturbances resulting from underground nuclear tests, 10:45071 (RA;US)
NUCLEAR EXPLOSIONS
Specifically named single nuclear explosions are listed by name and the word EVENT, e.g., BOXCAR EVENT. All projects involving nuclear explosions are listed by the project name and the word PROJECT, e.g., PLOWSHARE PROJECT.
See also CASTLE PROJECT
CROSSROADS PROJECT
DOMINIC PROJECT
Atmospheric Explosions
D-region physical chemistry, 10:45060 (R;US)
Bibliographies
Bibliography of reports by US Geological Survery personnel on studies of underground nuclear test sites and on waste management studies at the Nevada Test Site and the Waste Isolation Pilot Plant Site, New Mexico, January 1, 1983-December 31, 1984, 10:43881 (R;US)
Biological Radiation Effects
Report of Project 1-M-54 on thirty service men exposed to residual radiation at Operation castle, 10:45065 (R;US)
Electromagnetic Pulses
EMP-induced, time-domain grazing solution for an infinite wire over the ground, 10:45067 (R;US)
Electron Density
Nitrogen chemistry in sea-level air following large radiation doses. Technical report, 1 February 1980-30 September 1981, 10:44830 (R;US)
Fallout
Incorporation of Hopkins variable wind model into a population-dose fallout code. Master's thesis, 10:45118 (R;US)
Model for world-wide fallout in the Northern Hemisphere. Master's thesis, 10:45120 (R;US)
Gamma Spectra
Initial gamma data from nuclear-weapon tests 1948 through 1962, 10:45063 (R;US)
Neutron Dosimetry
Calculation and interpretation of in situ measurements of initial radiations at Hiroshima and Nagasaki, 10:45255 (BA;JP)
Nuclear Winter
Some policy implications of nuclear winter, 10:45061 (R;US)
Physical Radiation Effects
Calculating the vulnerability of synthetic polymers to autoignition during nuclear flash. Final report, 10:45068 (R;US)
Radiation Chemistry
Nitrogen chemistry in sea-level air following large radiation doses. Technical report, 1 February 1980-30 September 1981, 10:44830 (R;US)
Radiation Doses
Calculation and interpretation of in situ measurements of initial radiations at Hiroshima and Nagasaki, 10:45255 (BA;JP)
Radioactive Effluents
Radioactive contamination of ventilation supply system, USS Crittenden, from Baker Explosion, Operation Crossroads. Final report, 10:45066 (R;US)
Simulation
Nitrogen chemistry in sea-level air following large radiation doses. Technical report, 1 February 1980-30 September 1981, 10:44830 (R;US)
Pore fluid migration model for stress cage decay, 10:45057 (R;US)
Underground Explosions
Low-frequency spectral minimum in underground explosion P spectra. Technical report, November 1982-November 1983, 10:45069 (R;US)
NUCLEAR FACILITIES
See also FEED MATERIALS PLANTS
FUEL FABRICATION PLANTS
FUEL REPROCESSING PLANTS
IRRADIATION PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
Decontamination
Decontamination of nuclear facilities. Keynote addresses, 10:43889 (R;CA)
Ventilation Systems
Fire simulation in nuclear facilities--the FIRAC code and supporting experiments, 10:43893 (RA;US)
NUCLEAR FIREBALL MODEL
Spallation
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
NUCLEAR FORCES
Nucleon-Nucleon Interactions
Contribution of the induced interaction to (g'o)sub(ΔN), 10:45696 (RA;DE)
NUCLEAR FRAGMENTS
See also FISSION FRAGMENTS
SPALLATION FRAGMENTS
Mean Free Path
Free path length of neon-22 fragments in photoemulsion at 4.1 A GeV/c momentum and anomalon problem, 10:45614 (R;SU;In Russian)
NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS
NUCLEAR FUELS
See also SPENT FUELS
Crystallization
Method of controlling crystallite size in nuclear-reactor fuels, 10:43813 (P;US)
Gelation
Method of controlling crystallite size in nuclear-reactor fuels, 10:43813 (P;US)
Radioactive Waste Disposal
Canadian nuclear fuel waste management program, 10:43823 (R;CA)
Radioactive Waste Management
Canadian nuclear fuel waste management program, 10:43823 (R;CA)
NUCLEAR MAGNETIC RESONANCE
Contrast Media
Study of paramagnetic contrast agents for NMR imaging: theoretical and experimental aspects (the case of Mn^{2+} ion), 10:45201 (R;FR;In French)
Iterative Methods
Fixed point theory of iterative excitation schemes in NMR, 10:45048 (J;US)
Measuring Methods
Fixed point theory of iterative excitation schemes in NMR, 10:45048 (J;US)
NUCLEAR MATERIALS DIVERSION
Detection
Sequential test procedures for detecting protracted materials losses, 10:43908 (R;US)
NUCLEAR MATERIALS MANAGEMENT
Accounting
Application of the limited frequency-unannounced access strategy measurement technology in gas centrifuge enrichment plants, 10:43902 (R;US)
Experience with confirmatory measurements at the Savannah River Plant, 10:43901 (R;US)
In-line x-ray fluorescence analysis of special nuclear materials in dissolver solution: materials development, laboratory simulation and parameterization, 10:44751 (R;US)
NUCLEAR MATTER
Hartree-Fock Method
Intensified and asymmetric barrier penetration of nuclear slabs in time-dependent Hartree-Fock approximation, 10:45707 (R;SU)
Heating
High nuclear temperatures by antimatter-matter annihilation, 10:45716 (J;NL)

Nuclear Temperature
High nuclear temperatures by antimatter-matter annihilation, 10:45716 (J;NL)
Plasticity
Theory of and effects from elastoplasticity in nucleus-nucleus collisions, 10:45687 (R;DE)
Tunnel Effect
Intensified and asymmetric barrier penetration of nuclear slabs in time-dependent Hartree-Fock approximation, 10:45707 (R;SU)
Viscosity
Dynamical theories of nuclear fission, viscosity and dissipative effects, 10:45692 (RA;XA)

NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Lectures
Van de Graaff Group, 10:44987 (RA;ZA)
Meetings
LAMPF workshop on Dirac approaches to nuclear physics: proceedings, 10:45709 (R;US)
PANIC - particles and nuclei - tenth international conference. Book of abstracts. Vol. 2, 10:45573 (R;DE)
Research Programs
1983. Annual progress report. [Nuclear physics research program], 10:45575 (R;FR;In French)
Reviews
Annual report 1984 of the 2. Institut fuer Experimentalphysik Universitaet Hamburg, 10:45574 (R;DE;In German)

NUCLEAR POWER PLANTS
Containment Buildings
Techniques and results from the internal pressurization of a 1/8 scale steel containment model, 10:44299 (R;US)
Control Rooms
Human engineering guidelines for the evaluation and assessment of Video Display Units, 10:44312 (R;US)
Emergency Plans
Community emergency planning, 10:44320 (RA;IN)
National nuclear emergency planning in Japan, 10:44321 (RA;IN)
Onsite and offsite emergency planning, 10:45237 (RA;IN)
Philippine Atomic Energy Commission National Radiological Emergency Preparedness/Response Plan for Nuclear Plant Incidents (master plan), 10:44421 (RA;IN)
Radiation emergency preparedness for nuclear power plant in Korea, 10:44420 (RA;IN)
Engineered Safety Systems
Initial quantification of human errors associated with reactor safety system components in licensed nuclear power plants, 10:44392 (R;US)
Equipment
Radiation data for design and qualification of nuclear plant equipment. Final report, 10:44291 (R;US)
Human Factors
Initial quantification of human errors associated with reactor safety system components in licensed nuclear power plants, 10:44392 (R;US)
Loose Parts Monitoring
Characteristics and performance experience of loose-part monitoring systems in US commercial power reactors, 10:44293 (R;US)
Loss of Coolant
Load Combination Program. Progress report No. 6. Vol. 2 (LOCA induced by earthquake), 10:44382 (R;US)
Mechanical Structures
Reduction of structural degrees of freedom, 10:44297 (R;US)
Off-Gas Systems
Retention of ^{131}I volatilized from aqueous solutions by sorbents, 10:44317 (R;DE)
Power Generation
Economy of scale, 10:45831 (R;US)
Radioactive Effluents
Radioactive materials released from nuclear power plants, 10:44319 (R;US)
Reactor Accidents
Licensee Event Report (LER) compilation, June 1985. Volume 4, No. 6, 10:44400 (R;US)
Thermodynamics of nuclear materials. Proceedings, 10:44436 (B;NL)
Reactor Components
Calculations for protection against time-dependent strain. Fatigue data from stress-strain controlled fatigue tests with compressive and tensile stress, or bending stress, on steels. 3rd technical report, 10:44288 (R;DE;In German)
Multivariate statistical study for detection of failure trends and patterns in the analysis of events at nuclear power plants, 10:44347 (RA;US)
Reactor Control Systems
Combination of artificial intelligence and procedural language programs in a computer application system supporting nuclear reactor operations, 10:44310 (R;US)
Reactor Decommissioning
Investigations on the decommissioning of nuclear facilities, 10:44274 (R;DE;In German)
Reactor Licensing
Nuclear Regulatory Commission issuances. Volume 21, No. 5, 10:44277 (R;US)
Operating reactors licensing actions summary. Volume 5, No. 6, 10:44276 (R;US)
Reactor Maintenance
Empirical analysis of selected nuclear power plant maintenance factors and plant safety, 10:44413 (R;US)
Reactor Materials
Radiation data for design and qualification of nuclear plant equipment. Final report, 10:44291 (R;US)
Reactor Operation
Licensee Event Report (LER) compilation, June 1985. Volume 4, No. 6, 10:44400 (R;US)
Reactor Operators
Psychological scaling of expert estimates of human error probabilities: application to nuclear power plant operation, 10:44429 (R;US)
Reactor Safety
Empirical analysis of selected nuclear power plant maintenance factors and plant safety, 10:44413 (R;US)
Risk Assessment
Approach to the quantification of seismic margins in nuclear power plants, 10:44416 (R;US)
Determination of several LWR realistic success criteria for probabilistic risk assessment. Final report, 10:44346 (R;US)
Multivariate statistical study for detection of failure trends and patterns in the analysis of events at nuclear power plants, 10:44347 (RA;US)
Parametric Empirical Bayes methods for failure rate estimation, 10:44348 (RA;US)
Simplified seismic probabilistic risk assessment: procedures and limitations, 10:44415 (R;US)
Safety Engineering
Thermodynamics of nuclear materials. Proceedings, 10:44436 (B;NL)
Seismic Effects
Approach to the quantification of seismic margins in nuclear power plants, 10:44416 (R;US)
Load Combination Program. Progress report No. 6. Vol. 2 (LOCA induced by earthquake), 10:44382 (R;US)
Seismic effects on technological equipment and systems of nuclear power plants, 10:44359 (R;CS;In Czech)
Simplified seismic probabilistic risk assessment: procedures and limitations, 10:44415 (R;US)
Service Life
Longevity of nuclear power systems. Final report, 10:44211 (R;US)

NITRO COMPOUNDS
Chemical Preparation
Structure of adeninium dinitrate, $C_5H_7N_5^{2+}$. $2NO_3^-$, 10:44791 (J;DK)
Crystal Structure
Structure of adeninium dinitrate, $C_5H_7N_5^{2+}$. $2NO_3^-$, 10:44791 (J;DK)
Fluorescence
Exciplex formation in alcohol and water solutions of 7-azaindole, 10:44829 (J;US)
Molecular Structure
Structure of adeninium dinitrate, $C_5H_7N_5^{2+}$. $2NO_3^-$, 10:44791 (J;DK)
ORGANIC POLYMERS
See also COPOLYMERS
POLYESTERS
POLYETHYLENE GLYCOLS
RESINS
THERMOPLASTICS
Chemical Preparation
Procedure for the production of linear thermoplastic polymers from the breakdown products of pyrolysis of p-xylene-bis-sulfones, 10:44696 (TG;US)
ORGANIC SOLVENTS
Coal Liquefaction
Coal liquefaction via low temperature, low pressure water-gas shift solvent hydrogenation, 10:43636 (R;US)
Hydrogen Transfer
Coal liquefaction via low temperature, low pressure water-gas shift solvent hydrogenation, 10:43636 (R;US)
Hydrogenation
Coal liquefaction via low temperature, low pressure water-gas shift solvent hydrogenation, 10:43636 (R;US)
ORGANIC WASTES
See also AGRICULTURAL WASTES
Air Pollution
Model for evaluation of refinery and synfuels VOC (volatile organic compounds) emission data. Volume 1. Technical report and Appendix A. Final report, June 1983-September 1984, 10:45105 (R;US)
Model for evaluation of refinery and synfuels VOC (volatile organic compounds) emission data. Volume 2. Appendices B and C. Final report, June 1983-September 1984, 10:45106 (R;US)
Mathematical Models
Model for evaluation of refinery and synfuels VOC (volatile organic compounds) emission data. Volume 2. Appendices B and C. Final report, June 1983-September 1984, 10:45106 (R;US)
ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.
Absorption Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH₃)/sub n/CR'(COOC₂H₅)₂, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH₃)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Chemical Preparation
Organotellurium compounds of biological interest - unique properties of the N-Chlorosuccinimide oxidation product of 9-telluraheptadecanoic acid, 10:44819 (J;US)
Synthesis and antitumor activity of 2-β-D-ribofuranosylselenazole-4-carboxamide and related derivatives, 10:44792 (J;US)

Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH_3)/sub n/CR'($COOC_2H_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH_2)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Mass Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH_3)/sub n/CR'($COOC_2H_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH_2)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)

ORGDP
Materials Handling Equipment
Uranium hexafluoride subsampling system, 10:43810 (R;US)

ORNL RESEARCH REACTOR
See ORR REACTOR

ORNL-PCA REACTOR
Bulk Shielding Facility quarterly report, October, November and December 1984, 10:44331 (R;US)

ORR REACTOR
Computerized Control Systems
Computerized process control system for the ORR-PSF irradiation experiment. Part 2: mathematical basis and computer implementation of the temperature control algorithm. Volume 2, 10:44330 (R;US)
Fuel Plates
Postirradiation analysis of experimental uranium-silicide dispersion fuel plates, 10:44185 (R;US)
Reactor Experimental Facilities
Computerized process control system for the ORR-PSF irradiation experiment. Part 2: mathematical basis and computer implementation of the temperature control algorithm. Volume 2, 10:44330 (R;US)

OSCILLATIONS
Nonlinear Problems
Statistics of Poincare recurrences and the structure of the stochastic layer of a nonlinear resonance, 10:45774 (TG;US)

OSCILLATIONS (PLASMA)
See PLASMA WAVES

OSCILLATORS
Coupling
Fat fractals on the energy surface, 10:45769 (J;US)
Equations of Motion
Fat fractals on the energy surface, 10:45769 (J;US)
Fluctuations
Fat fractals on the energy surface, 10:45769 (J;US)

OSMOTIC POWER PLANTS
See SALINITY GRADIENT POWER PLANTS

OUTER CONTINENTAL SHELF
See CONTINENTAL SHELF

OUTGASSING
See DEGASSING

OVENS
Design
Electron impact heated atomic hydrogen oven, 10:45405 (J;US)
Fabrication
Electron impact heated atomic hydrogen oven, 10:45405 (J;US)
Performance
Electron impact heated atomic hydrogen oven, 10:45405 (J;US)

OXETANE
See ETHERS

OXIDANTS
See OXIDIZERS

OXIDATION
Catalysts
Catalytic wet oxidation of wastewater produced in slagging fixed-bed and stirred fixed-bed coal gasifiers, 10:43640 (BA;US)
Feedback
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, 10:43701 (R;US)
Mathematical Models
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, 10:43701 (R;US)
Parametric Analysis
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, 10:43701 (R;US)

OXIDE MINERALS
See als: AESCHYNITE, HEMATITE, MAGNETITE, RUTILE, SILICA, SPINELS, ZIRCONOLITE
Diagenesis
Unusual occurrence of maghemite in soils developed on Knox group dolostones, 10:45287 (R;US)

OXIDIZERS
Impurities
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1984, 10:44516 (R;US)

OXIDIZING AGENTS
See OXIDIZERS

OXIRANS
See EPOXIDES

OXONIUM IONS
Absorption Spectra
Diode laser absorption spectroscopy of D_3O^+: Determination of the equilibrium structure and potential function of the oxonium ion, 10:45402 (J;US)
Molecular Structure
Diode laser absorption spectroscopy of D_3O^+: Determination of the equilibrium structure and potential function of the oxonium ion, 10:45402 (J;US)

OXYGEN
Mechanism of photosynthetic oxygen evolution: a study of the primary photoreactions and of electron carriers, 10:44004 (R;XE)
Activation Analysis
Quantitative analysis of oxygen in arsenic trichloride by fast neutron activation, 10:44770 (TJ;US)
Chemical Reactions
Upper limit for the methane-oxygen initiation reaction in the presence of iodine-131 behind reflected shock waves, 10:44794 (D;US)
Corrosive Effects
Effect of oxygen on the failure of reactor fuel sheaths during a postulated loss-of-coolant accident (BURST-3 model), 10:44334 (R;CA)
Hadronic Atoms
Study of antiprotonic X-ray and gamma spectra at LEAR, 10:45432 (RA;DE)
Neutron Reactions
Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University, 10:45604 (RA;JP;In Japanese)
Pionic Atoms
Precision measurements of 3D-2P pionic X-rays in low-Z atoms, 10:45362 (RA;DE)
Separation Processes
Oxygen enrichment of air using semipermeable membranes in a magnetic field. Final report, January 15, 1983-January 14, 1985, 10:44741 (R;US)

OXYGEN 16 REACTIONS
Compound-Nucleus Reactions
Contributions to the study of nuclear reactions mechanism induced by heavy ions on intermediate mass nuclei, 10:45625 (R;RO;In Romanian)
Heavy Ion Fusion Reactions
High-spin states in ^{24}Mg, 10:45615 (J;GB)
Incomplete Fusion Reactions
High-spin states in ^{24}Mg, 10:45615 (J;GB)

OXYGEN 16 TARGET
Proton Reactions
Investigation of the reaction ^{16}O(p,n)^{16}F at Esub(p)=135 MeV, 10:45607 (R;SU)
Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei, 10:45603 (R;FR)

OXYGEN 18 REACTIONS
Particle Production
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
OXYGEN 18 TARGET
Proton Reactions
Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei, 10:45603 (R;FR)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN
OXYGEN HYDRIDES
See WATER
OXYGEN POTENTIAL
Data Compilation
Chemical thermodynamic representations of <PuO/sub 2-x> and <U/sub 1-z/Pu/sub z/O/sub w/>, 10:44842 (R;US)
OYSTER CREEK-1 REACTOR
Forked River, New Jersey, USA
Reactor Safety
Seismic review of the Oyster Creek Nuclear Power Plant as part of the Systematic Evaluation Program, 10:44398 (R;US)
Seismic Effects
Seismic review of the Oyster Creek Nuclear Power Plant as part of the Systematic Evaluation Program, 10:44398 (R;US)
OZONE
Biological Effects
Ozone suppression of white pine net photosynthesis, 10:45279 (J;US)

P

P INVARIANCE
Nucleon-Nucleon Interactions
Parity nonconserving electroweak effects in radiative nucleon-nucleon scattering, 10:45479 (RA;DE)
Photon-Nucleon Interactions
Parity violation in the nucleon wave function, electromagnetic interaction and PNC meson-nucleon coupling constants, 10:45487 (RA;DE)
PABA
Phosphorescence
Effects of polyacrylic acid on the room-temperature phosphorescence of selected compounds, 10:44815 (J;NL)
PACIFIC GAS DIABLO CANYON-1 REACTOR
See DIABLO CANYON-1 REACTOR
PACIFIC GAS DIABLO CANYON-2 REACTOR
See DIABLO CANYON-2 REACTOR
PACKAGING
Materials Testing
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PALISADES-1 REACTOR
Reactor Safety
Seismic review of the Palisades Nuclear Power Plant Unit 1 as part of the Systematic Evaluation Program, 10:44390 (R;US)
Seismic Effects
Seismic review of the Palisades Nuclear Power Plant Unit 1 as part of the Systematic Evaluation Program, 10:44390 (R;US)
PALLADIUM
Catalytic Effects
Applications of functionalized polymers in catalysis. Progress report, September 1, 1977-June 1, 1978, 10:44798 (R;US)
Procedure for the hydrodesulphurisation of a gas containing oxygen and organic sulphur compounds, 10:43750 (TG;GB)
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
PALLADIUM COMPOUNDS
See also PALLADIUM HYDRIDES
Catalytic Effects
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
PALLADIUM HYDRIDES
Potentials
Localized vibrations of hydrogen in metals, 10:45392 (RA;US)
Transition Temperature
Localized vibrations of hydrogen in metals, 10:45392 (RA;US)
PALO DURO BASIN
Aquifers
Testing and sampling of deep brine aquifers in the Palo Duro Basin, West Texas, 10:43885 (J;US)
PAPER INDUSTRY
Cold Working
Development of a cold corrugating process. Final report, 10:44562 (R;US)
PARA-AMINOBENZOIC ACID
See PABA
PARADOX BASIN
Geomorphology
Geologic characterization report for the Paradox Basin Study Region, Utah Study Areas. Volume 6. Salt Valley, 10:43863 (R;US)
Hydrology
Geologic characterization report for the Paradox Basin Study Region, Utah Study Areas. Volume 6. Salt Valley, 10:43863 (R;US)
Stratigraphy
Geologic characterization report for the Paradox Basin Study Region, Utah Study Areas. Volume 6. Salt Valley, 10:43863 (R;US)
Tectonics
Geologic characterization report for the Paradox Basin Study Region, Utah Study Areas. Volume 6. Salt Valley, 10:43863 (R;US)
Topography
Geologic characterization report for the Paradox Basin Study Region, Utah Study Areas. Volume 6. Salt Valley, 10:43863 (R;US)
PARAFFINS
See ALKANES
PARALLEL PROCESSING
Representation of knowledge in image understanding. Annual scientific report, 1 May 1983-30 April 1984, 10:45904 (R;US)
Algorithms
Parallelized-point successive over-relaxation method on a multiple instruction multiple data stream computer. Memorandum report, 10:45903 (R;US)
Computer Codes
Parallel P-code for Parallel Pascal and other high level languages, 10:45922 (R;US)
PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE
PARITY NONCONSERVATION
See P INVARIANCE
PARTICLE INTERACTIONS
See also HADRON-HADRON INTERACTIONS
PHOTON-PHOTON INTERACTIONS
Quasipotential Equation
Relativistic quantum mechanics of two interacting spinless particles, 10:45756 (R;FR)
PARTICLE-HOLE MODEL
Energy Levels
Spectra of nuclei in the lead region in the framework of the RPA with OBE-G-matrix interactions, 10:45663 (R;DE;In German)
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.

Air Pollution
Emission inventory for urban particle-model validation in the Philadelphia AQCR (air quality control region). Final report, June 1982-September 1984, 10:45104 (R;US)
Chemical Analysis
Collection methods for the determination of stationary source particulate sulfur and other elements, 10:45109 (RA;US)
Chemical Composition
Fate of sulfuric acid aerosol in the atmosphere, 10:45095 (R;SE)
Deposition
Critique of methods to measure dry deposition workshop summary, 10:45110 (R;US)
Health Hazards
Coal refuse disposal practices and challenges in the United States, 10:43661 (RA;US)
Long-Range Transport
Characteristics and origins of sulfur dioxide, total suspended particulates, and sulfates in Western Pennsylvania, 10:45112 (R;US)
Pollution Sources
Characteristics and origins of sulfur dioxide, total suspended particulates, and sulfates in Western Pennsylvania, 10:45112 (R;US)
Sampling
Collection methods for the determination of stationary source particulate sulfur and other elements, 10:45109 (RA;US)

PASSIVE SOLAR COOLING SYSTEMS
Passive solar living, 10:44031 (RA;US)
Field Tests
Residential Passive Solar Energy Program, 10:44058 (R;US)
Research Programs
Applied Science Division annual report, Solar Energy Program FY 1983, 10:44070 (R;US)

PASSIVE SOLAR HEATING SYSTEMS
Passive solar living, 10:44031 (RA;US)
Field Tests
Residential Passive Solar Energy Program, 10:44058 (R;US)
Performance
Design and analysis of passive-solar-heating solutions for neighborhood commercial-strip settings. Final report, 10:44075 (R;US)
Performance Testing
Passive vapor transport solar heating systems, 10:44069 (R;US)
Research Programs
Applied Science Division annual report, Solar Energy Program FY 1983, 10:44070 (R;US)
Self-Pumping Systems
Passive vapor transport solar heating systems, 10:44069 (R;US)

PATENTS
Use only for items about patents, not for items which are patents.
Bibliographies
Current Energy Patents: a current awareness journal, 10:45899 (J;US)

PATIENTS
Radiation Doses
Field study to evaluate radiation doses in dental practices, 10:45202 (R;DE;In German)
Medical aspects of radiation accidents treated in France, 10:45246 (RA;IN)

PCA-ORNL REACTOR
See ORNL-PCA REACTOR

PCB
See CHLORINATED AROMATIC HYDROCARBONS

PDX DEVICES
Limiters
Characterization of impurities deposited on the PDX graphite rail limiter, 10:45889 (J;NL)
High energy and particle confinement times in PDX scoop discharges, 10:45872 (J;NL)

PEACH BOTTOM-2 REACTOR
York County, Pennsylvania, USA
Computerized Simulation
High-speed BWR power plant simulations on the special-purpose peripheral processor AD10, 10:44214 (BA;GB)
Transients
High-speed BWR power plant simulations on the special-purpose peripheral processor AD10, 10:44214 (BA;GB)

PEAT
Uranium Deposits
Uranium enrichment in European peat bogs, 10:43785 (RA;XA)

PEATLANDS
See WETLANDS

PEGMATITES
Muscovite
Polarized optical absorption and ^{57}Fe Moessbauer study of pegmatitic muscovite, 10:45312 (J;US)

PELLETS (FUEL)
See FUEL PELLETS

PELVIS
Biological Radiation Effects
Therapeutic dosimetry for Cf-252 neutron brachytherapy of pelvic cancer, 10:45252 (J;US)

PENNING ION SOURCES
Microwave Radiation
Effect of resonant microwave power on a PIG ion source. Revision, 10:45396 (R;US)

PERSONAL COMPUTERS
(Prior to April 1985 this information was indexed to microprocessors.)
Management
Managing personal desktop computing at Argonne National Laboratory, 10:45908 (R;US)
Uses
Providing personal desktop computing recommendations, 10:45907 (R;US)

PERSONNEL
Studies of groups of persons employed in a particular field of endeavor. For studies on individuals in a group see also MAN.
See also MEDICAL PERSONNEL
MILITARY PERSONNEL
MINERS
REACTOR OPERATORS
Education
Hints concerning the instruction of personnel in accordance with section 39 of the Radiation Protection Ordinance, 10:45739 (R;DE;In German)
Identification Systems
Positive identity entry control system with geographically distributed portals and enrollment stations, 10:43911 (R;US)
Status of personnel identity verifiers, 10:43910 (R;US)

PERTURBATION THEORY
Gauge Invariance
Gluon condensate from lattice caculations: SU(3) pure gauge theory, 10:45555 (RA;PL)
Quantum Chromodynamics
Spin physics at short distances as a means of studying QCD, 10:45501 (RA;PL)
Series Expansion
Large N expansions work, 10:45755 (RA;PL)

PETN
Detonations
Spectroscopic studies of detonating heterogeneous explosives, 10:45055 (R;US)

PETROCHEMICAL PLANTS
Economic Analysis
Proposed superfund tax increases and the US petrochemical industry: an economic analysis, 10:43726 (R;US)
Materials
Commercial application of heat resistant materials in petrochemical processing furnaces, 10:44659 (TJ;GB)
Safety
Human operator failures in petrochemical facilities. An historical investigation and a tentative simulation model, 10:43725 (RA;US)
Tax Laws
Proposed superfund tax increases and the US petrochemical industry: an economic analysis, 10:43726 (R;US)
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
See also PETROLEUM FRACTIONS
Cost
Review and analysis of oil import premium estimates, 10:44492 (R;US)
Social cost of imported oil and US import policy , 10:43733 (R;US)
Data Compilation
Petroleum Supply Monthly, June 1985, 10:43727 (R;US)
State Energy Overview 1983, 10:44506 (R;US)
Distribution
Analysis of oil withdrawal and distribution tests for the Strategic Petroleum Reserve, 10:43744 (R;US)
Economic Impact
Energy: the international dimension, 10:44496 (R;US)
Embargoes
Analysis of embargoes and supply shocks in a market with a dominant seller, 10:44485 (R;US)
Energy Policy
Energy: the international dimension, 10:44496 (R;US)
Government Policies
Social cost of imported oil and US import policy , 10:43733 (R;US)
Imports
Review and analysis of oil import premium estimates, 10:44492 (R;US)
Social cost of imported oil and US import policy , 10:43733 (R;US)
Market
Inventories and quantity constrained equilibria in regulated markets: the US Petroleum Industry, 1947-1972, 10:43730 (R;US)
OPEC's investments and the international financial system, 10:43734 (R;US)
Prices
Inventories, arbitrage, and public-private interactions , 10:43729 (R;US)
Inventories and quantity constrained equilibria in regulated markets: the US Petroleum Industry, 1947-1972, 10:43730 (R;US)
Two illustrations of the importance of dynamics for modeling energy-capital substitutability, 10:43732 (R;US)
What causes oil price shocks, 10:44486 (R;US)
Sales
Analysis of oil withdrawal and distribution tests for the Strategic Petroleum Reserve, 10:43744 (R;US)
Socio-Economic Factors
Energy policy project: petroleum and natural gas in Egypt. Final report, 10:43740 (R;US)
Stockpiles
Implications of macroeconomic disruption costs and public-private interactions for strategic oil stockpiling, 10:44493 (R;US)
International cooperation in tariffs and stockpiles for coping with oil supply disruptions, 10:44481 (R;US)
Inventories, arbitrage, and public-private interactions , 10:43729 (R;US)
Storage
Lowering storage losses of volatile hydrocarbons by adsorption, 10:43743 (R;FR;In French)
Supply Disruption
Analysis of embargoes and supply shocks in a market with a dominant seller, 10:44485 (R;US)
Impact of oil market disruptions on other fuel prices, 10:44488 (R;US)
International cooperation in tariffs and stockpiles for coping with oil supply disruptions, 10:44481 (R;US)
Oil supply disruptions and the optimal tariff in a dynamic stochastic equilibrium model, 10:44483 (R;US)
Policy responses to oil disruption risks: an analytical overview , 10:44490 (R;US)
Tariffs and the economic costs of an oil disruption, 10:44494 (R;US)
Tariffs
Implications of macroeconomic disruption costs and public-private interactions for strategic oil stockpiling, 10:44493 (R;US)
International cooperation in tariffs and stockpiles for coping with oil supply disruptions, 10:44481 (R;US)
Tariffs and the economic costs of an oil disruption, 10:44494 (R;US)
Toxic Materials
Light activation of genotoxic components in natural and synthetic crude oils, 10:43738 (BA;US)
Underground Storage
Analysis of oil withdrawal and distribution tests for the Strategic Petroleum Reserve, 10:43744 (R;US)

Synthesis of new polyphosphonic acids, uranium extracting agents in a phosphoric medium, 10:43806 (R;FR;In French)
PHOSPHORIC ACID
Uranium recovery from phosphoric acid with selective resins, 10:43807 (RA;IL)
PHOSPHORUS
Environmental Transport
Estimating nutrient loadings of lakes from non-point sources, 10:45173 (R;US)
PHOTOCHEMICAL REACTIONS
See also PHOTOSYNTHESIS
Computerized Simulation
Contribution to the theoretical and experimental study of solar photochemical reactors, 10:44088 (R;FR;In French)
Electron Transfer
Mechanism of photosynthetic oxygen evolution: a study of the primary photoreactions and of electron carriers, 10:44004 (R;XE)
PHOTOCHEMISTRY
Electron Transfer
Vectorial electron transfer on designed surfaces. Annual report, January 1984-January 1985, 10:44827 (R;US)
PHOTODISINTEGRATION
See PHOTONUCLEAR REACTIONS
PHOTOMAGNETOELECTRIC EFFECT
See MAGNETIC FIELDS
PHOTOMETERS
See also DENSITOMETERS
Calibration
Radiometry using synchrotron radiation. Final report, 10:45045 (R;US)
PHOTON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
PHOTON BEAMS
Polarized Beams
Polarized targets and beams, 10:44963 (R;DE)
PHOTON DETECTION (X-RAY)
See X-RAY DETECTION
PHOTON TRANSPORT
Numerical Solution
Transport equation solving methods, 10:45721 (R;FR;In French)
PHOTON-ATOM COLLISIONS
Ionization
Configuration interaction in multiphoton ionization. Final report, 10:45398 (R;US)
PHOTON-ELECTRON INTERACTIONS
Inelastic Scattering
New experimental results in two-photon physics, 10:45454 (R;NL)
PHOTON-NUCLEON INTERACTIONS
See also PHOTON-PROTON INTERACTIONS
Coupling Constants
Parity violation in the nucleon wave function, electromagnetic interaction and PNC meson-nucleon coupling constants, 10:45487 (RA;DE)
Multiple Production
Theoretical study of parton fragmentation and evolution into hadrons, 10:45527 (D;US)
PHOTON-PHOTON INTERACTIONS
Deep Inelastic Scattering
Processes related to photon-photon collisions, 10:45511 (R;FR)
Multiple Production
Total cross section $\gamma\gamma$->hadrons, 10:45416 (R;DE)
Pair Production
Processes related to photon-photon collisions, 10:45511 (R;FR)
Particle Production
New experimental results in two-photon physics, 10:45454 (R;NL)
Total Cross Sections
Total cross section $\gamma\gamma$->hadrons, 10:45416 (R;DE)
PHOTON-PROTON INTERACTIONS
Particle Production
Study of D/sup / production in high-energy γp interactions, 10:45457 (J;US)
PHOTONUCLEAR REACTIONS
Counting Techniques
Photonuclear physics with low intensity photon beams, 10:45579 (R;DE)
Distorted Wave Theory
Measurement of $^{14}N(\gamma,\pi^+)^{14}C$ (g.s.) at 200 MeV: A test of the distorted-wave impulse approximation for charged-pion photoproduction below the $\Delta(1232)$ resonance, 10:45610 (J;US)
Impulse Approximation
Measurement of $^{14}N(\gamma,\pi^+)^{14}C$ (g.s.) at 200 MeV: A test of the distorted-wave impulse approximation for charged-pion photoproduction below the $\Delta(1232)$ resonance, 10:45610 (J;US)

PHOTOPRODUCTION
Neutrinos
V-A structure of the charged weak current of the tau lepton and the reaction $\gamma + N \rightarrow$ lsup(+-) + upsilonsub(l) + N', 10:45480 (RA;DE)
PHOTOSYNTHESIS
Inhibition
Ozone suppression of white pine net photosynthesis (Pinus strobus), 10:45279 (J;US)
PHOTOSYNTHETIC REACTION CENTERS
Biochemical Reaction Kinetics
Photosynthetic water oxidation by green plants: on the role of protons, 10:44005 (R;XE)
Electron Transfer
Application of electron-transfer theory to several systems of biological interest, 10:43979 (R;US)
Mechanism of photosynthetic oxygen evolution: a study of the primary photoreactions and of electron carriers, 10:44004 (R;XE)
PHOTOVOLTAIC CELLS
See also SOLAR CELLS
Bibliographies
Direct Energy Conversion: a current awareness bulletin, 10:44508 (J;US)
PHOTOVOLTAIC POWER PLANTS
Commercialization
Budget overruns threaten first solar 100 MWe photovoltaic project, 10:44018 (J;GB)
Cost Overruns
Budget overruns threaten first solar 100 MWe photovoltaic project, 10:44018 (J;GB)
Solar Cell Arrays
Installation of a modular building block photovoltaic concentrator array field, 10:44007 (R;US)
PICKERING-2 REACTOR
Pickering, Ontario, Canada
Failures
Highlights of the metallurgical behaviour of CANDU pressure tubes, 10:44338 (R;CA)
Fractures
Analysis of the pressure tube failure at Pickering NGS 'A' unit 2, 10:44337 (R;CA)
Physical Metallurgy
Highlights of the metallurgical behaviour of CANDU pressure tubes, 10:44338 (R;CA)
Pressure Tubes
Analysis of the pressure tube failure at Pickering NGS 'A' unit 2, 10:44337 (R;CA)
Highlights of the metallurgical behaviour of CANDU pressure tubes, 10:44338 (R;CA)
PIG ION SOURCES

PINES
Aerial Monitoring
Remote sensing forest biomass for loblolly pine using high resolution airborne sensor data, 10:43998 (R;US)
Remote Sensing
Remote sensing forest biomass for loblolly pine using high resolution airborne sensor data, 10:43998 (R;US)
Sensitivity
Evaluation of the effects of acid precipitation on forest ecosystems using microcosm simulators: joint project TVA-ORNL, 10:45270 (RA;US)
PINS (FUEL)
See FUEL PINS
PION MINUS REACTIONS
Correlation Functions
Two particle correlations in pion-nucleus interactions at 40 GeV/c, 10:45505 (RA;PL)
Elastic Scattering
Atomic states in nonelastic scattering processes, 10:45494 (RA;DE)
Multiple Production
Two particle correlations in pion-nucleus interactions at 40 GeV/c, 10:45505 (RA;PL)
Optical Models
Relativistic impulse approximation for meson-nucleus scattering in the Kemmer-Duffin-Petiau formalism, 10:45620 (J;US)
PION MINUS-PROTON INTERACTIONS
Coherent Production
New O^- S meson and new results on the 1^+ S state in the 3π system coherently produced on nuclei; 5π coherent production on nuclei, 10:45451 (RA;PL)
Elastic Scattering
Atomic states in nonelastic scattering processes, 10:45494 (RA;DE)
Pair Production
e^+e^- pairs from π^- p at 300 MeV/c, 10:45431 (RA;DE)
PION PLUS REACTIONS
Charge-Exchange Reactions
Atomic states in nonelastic scattering processes, 10:45494 (RA;DE)
Optical Models
Relativistic impulse approximation for meson-nucleus scattering in the Kemmer-Duffin-Petiau formalism, 10:45620 (J;US)
PION PLUS-PROTON INTERACTIONS
Particle Production
Triggered-bubble-chamber study of the reaction $\pi^+ p \rightarrow \Delta^{++}\pi^0\pi^0$ at 16 GeV/c, ¿0:45458 (J;US)
PION REACTIONS
See also PION MINUS REACTIONS
PION PLUS REACTIONS
Elastic Scattering
Possible existence of narrow (ΔN) resonances, 10:45491 (RA;DE)
Total Cross Sections
Calculation of total cross sections of the hadron- nucleus interaction at low energies, 10:45595 (R;SU;In Russian)
PIONIC ATOMS
De-Excitation
Anomalous strong interaction in pionic atoms of Mg and Al, 10:45358 (RA;DE)
Pionic 2P-1S X-ray from 23Na, 10:45360 (RA;DE)
Precision measurements of 3D-2P pionic X-rays in low-Z atoms, 10:45362 (RA;DE)
Level Widths
Anomalous widths in pionic atoms and the problem of S-wave repulsion, 10:45373 (RA;DE)
X-Ray Spectra
Pionic 2P-1S X-ray from 23Na, 10:45360 (RA;DE)
Pionic 4F-3D X-rays from ^{208}Pb and ^{209}Bi, 10:45361 (RA;DE)
Pionic and muonic X-ray studies of ^{237}Np, 10:45359 (RA;DE)
Pionic atoms from high-energy nuclear collisions, 10:45355 (RA;DE)
PIONIZATION
Pion production in collisions of relativistic ions, 10:45653 (RA;PL)
PION-NUCLEON INTERACTIONS
Inclusive Interactions
Ksup(*+-)(892) production in π^- N interactions at 200 GeV/c, 10:45461 (J;NL)
PIONS
See also PIONS NEUTRAL
PIONS PLUS
Particle Production
Study of the cumulative effect in meson and nucleonic system production, 10:45632 (R;RO;In Romanian)
PIONS NEUTRAL
Electromagnetic Form Factors
Low energy electromagnetic neutral pion form factor, 10:45430 (RA;DE)
Leptonic Decay
e^+e^- pairs from π^- p at 300 MeV/c, 10:45431 (RA;DE)
Particle Production
Triggered-bubble-chamber study of the reaction $\pi^+ p \rightarrow \Delta^{++}\pi^0\pi^0$ at 16 GeV/c, 10:45458 (J;US)

PIONS PLUS
Electroproduction
Charged pion electroproduction and spin-isospin modes in nuclei, 10:45710 (R;FR)
Radiative Decay
Radiative decay of the π^+, 10:45425 (RA;DE)
PIPE FITTINGS
Friction Factor
Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)
PIPELINES
Environmental Impacts
AVL-1 Pipeline Project. Environmental assessment: Tennessee Gas Pipeline Company (Docket No. CP84-441-002), 10:43755 (R;US)
DCQ Pipeline Project. Environmental assessment: Texas Eastern Transmission Corporation, Algonquin Gas Transmission Company (Docket Nos. CP84-429-001 and CP84-654-001), 10:43756 (R;US)
PIPES
Cracks
Evaluation of cracking in feedwater piping adjacent to the steam generators in Nine Pressurized Water Reactor Plants, 10:44232 (R;US)
Eddy Current Testing
Finite element modeling of pulsed eddy current NDT phenomena, 10:44418 (R;US)
Failures
Probability of pipe fracture in the primary coolant loop of a PWR Plant. Volume 3. Nonseismic stress analysis. Load Combination Program, Project I final report, 10:44407 (R;US)
Fire Prevention
New fire barrier systems for cables and pipes, 10:44876 (TJ;GB)
Friction Factor
Coal water mixture development. Quarterly technical progress report, 10:43690 (R;US)
Impact Tests
Simplified model for computing pipe-to-pipe impact response, 10:44865 (R;US)
Mechanical Vibrations
Vortex induced vibrations in gapped restrainted pipes, 10:44861 (R;BR;In Portuguese)
Ruptures
Piping inelastic fracture mechanics analysis, 10:44294 (R;US)
Stress Analysis
Probability of pipe fracture in the primary coolant loop of a PWR Plant. Volume 3. Nonseismic stress analysis. Load Combination Program, Project I final report, 10:44407 (R;US)
Vortex Flow
Vortex induced vibrations in gapped restrainted pipes, 10:44861 (R;BR;In Portuguese)
PIXE ANALYSIS
Prior to October 1980, this concept was indexed to X-RAY EMISSION ANALYSIS.
Computer Codes
Matrix correction for PIXE in biomedical samples, 10:44749 (R;DE)
Corrections
Matrix correction for PIXE in biomedical samples, 10:44749 (R;DE)
PLANETARY MAGNETOSPHERES
Solar Wind
Proper solar wind power estimation and planetary radiometric efficiencies; and reply, 10:45338 (J;GB)
PLANT DISEASES
Epidemiology
Effects of simulated rain acidified with sulfuric acid on host-parasite interactions (Cronartium fusiforme on Quercus phellos; Meloidogyne hapla on Phaseolus vulgaris; uromyces phaseoli on Phaseolus vulgaris; Rhizobium on Phaseolus vulgaris and Glycine max Pseudomonas phaseolicola on Phaseolus), 10:45278 (BA;US)
Inhibition
Effects of simulated rain acidified with sulfuric acid on host-parasite interactions (Cronartium fusiforme on Quercus phellos; Meloidogyne hapla on Phaseolus vulgaris; uromyces phaseoli on Phaseolus vulgaris; Rhizobium on Phaseolus vulgaris and Glycine max Pseudomonas phaseolicola on Phaseolus), 10:45278 (BA;US)
PLANTS
See also ALGAE
CATTAILS
SUNFLOWERS
TREES
Exposure Chambers
Field air-exclusion system for measuring the effects of air pollutants on crops. Final report, 10:45271 (R;US)
Gasification
Development of water slurry gasification systems for high-moisture biomass, 10:43934 (R;US)
Injuries
Effects of sulfur oxides in the atmosphere on vegetation: revised chapter 5 for air quality criteria for sulfur oxides, 10:45272 (R;US)
Radionuclide Kinetics
Radon transport from uranium mill tailings via plant transpiration. Final report, 10:45144 (R;US)
PLANTS (INDUSTRIAL)

PLANTS (POWER)
See POWER PLANTS
PLASMA
See also COLD PLASMA
COLLISIONAL PLASMA
HIGH-BETA PLASMA
HOT PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
RELATIVISTIC PLASMA
ROTATING PLASMA
Antennas
Observation of the backward electrostatic ion-cyclotron wave, 10:45795 (J;US)
Ballooning Instability
Ballooning stability boundaries with plasma compression, 10:45791 (J;US)
Bibliographies
Fusion Energy Update: a current awareness journal, 10:45776 (J;US)
Bump-in-Tail Instability
Simulations of the single-mode, bump-on-tail instability, 10:45789 (J;US)
Energy Absorption
Analytical mode conversion calculations for the full wave equations at the ion second harmonics, 10:45793 (J;US)
Flute Instability
Ponderomotive and sideband coupling effects of ion-cyclotron heating on interchange stability, 10:45790 (J;US)
ICR Heating
Millimeter-wave generation by relativistic electron beams. Annual report, 1 October 1983-30 September 1984, 10:45777 (R;US)
Ponderomotive and sideband coupling effects of ion-cyclotron heating on interchange stability, 10:45790 (J;US)
Radio frequency heating in the ion-cyclotron range of frequencies, 10:45786 (J;US)
Ion Temperature
Quasilinear saturation of the kinetic ion mixing mode, 10:45792 (J;US)
Nonlinear Problems
Ponderomotive and sideband coupling effects of ion-cyclotron heating on interchange stability, 10:45790 (J;US)
Quasilinear saturation of the kinetic ion mixing mode, 10:45792 (J;US)
Simulations of the single-mode, bump-on-tail instability, 10:45789 (J;US)
Plasma Pressure
Ballooning stability boundaries with plasma compression, 10:45791 (J;US)

Plasma Waves
Observation of the backward electrostatic ion-cyclotron wave, 10:45795 (J;US)
Research Programs
Annual status report, 31 December 1983. [Research in Plasma Physics], 10:45775 (R;NL)
Spin Orientation
Collective effects in spin polarized plasmas, 10:45811 (J;GB)
Stability
Collective effects in spin polarized plasmas, 10:45811 (J;GB)
Thomson Scattering
High transmission, 20-channel polychromator for the Thomson-scattering diagnostic of TORTUR 3, 10:45026 (R;NL)
Transport Theory
CTR plasma engineering studies. Annual progress report, 1 December 1984-30 November 1985, 10:45841 (R;US)
Wave Propagation
Millimeter-wave generation by relativistic electron beams. Annual report, 1 October 1983-30 September 1984, 10:45777 (R;US)

PLASMA DIAGNOSTICS
Antennas
Electron confinement in a bumpy torus without the influence of hot-electron rings: "Ring killer" experiment, 10:45787 (J;US)
Emission Spectra
Experimental study of once ionized Helium Pα line shift. Plasma polarization effect, 10:45353 (R;FR;In French)
Holography
Multiframe holographic shadowgraphy and interferometry of laser target plasmas, 10:45893 (J;US)
Interferometers
Electron confinement in a bumpy torus without the influence of hot-electron rings: "Ring killer" experiment, 10:45787 (J;US)
Interferometry
Multiframe holographic shadowgraphy and interferometry of laser target plasmas, 10:45893 (J;US)
Ion Probes
Electron confinement in a bumpy torus without the influence of hot-electron rings: "Ring killer" experiment, 10:45787 (J;US)
Langmuir Probe
Electron confinement in a bumpy torus without the influence of hot-electron rings: "Ring killer" experiment, 10:45787 (J;US)
Ruby Lasers
Electron confinement in a bumpy torus without the influence of hot-electron rings: "Ring killer" experiment, 10:45787 (J;US)
X-Ray Spectroscopy
X-ray spectroscopy from variable Z laser-produced plasmas, 10:45817 (J;GB)

PLASMA DIODES
See THERMIONIC DIODES

PLASMA DISRUPTION
Instability Growth Rates
Dynamics of disruptive instability growth in a tokamak, 10:45820 (TG;US)

PLASMA HEATING
See also BEAM INJECTION HEATING
Radiowave Radiation
Radio frequency heating in the ion-cyclotron range of frequencies, 10:45786 (J;US)

PLASMA OSCILLATIONS

PLATINUM
Catalytic Effects
Vectorial electron transfer on designed surfaces. Annual report, January 1984-January 1985, 10:44827 (R;US)
Extraction
Chemical analyses of geothermal waters and Strategic Petroleum Reserve brines for metals of economic importance, 10:44137 (J;US)

PLESIOTHERAPY
See RADIOTHERAPY

PLT DEVICES
Limiters
PLT rotating pumped limiter, 10:45873 (J;NL)

PLUMES
Mathematical Models
Application of ALPHA-1 to plume model validation and development at a moderately complex site. Final report, 10:45090 (R;US)
Measurements of the plume path of a heavy plume, 10:45076 (R;NL)
Spatial Distribution
Temporal and spatial variability of the visual effects of stack plumes. Final report, 1 February 1983-1 January 1984, 10:45101 (R;US)
Visibility
Temporal and spatial variability of the visual effects of stack plumes. Final report, 1 February 1983-1 January 1984, 10:45101 (R;US)

PLUTONIUM
Absorption
Plutonium removal from aqueous solution via activated commercial magnetites, 10:43868 (R;US)
Accounting
Extrinsic and intrinsic complexities of the Los Alamos Plutonium Processing Facility, 10:43905 (R;US)
Dissolution
Plutonium dissolution from Rocky Flats Plant incinerator ash, 10:43870 (R;US)
Nuclear Materials Management
Experience with confirmatory measurements at the Savannah River Plant, 10:43901 (R;US)
Radioactive Waste Processing
Plutonium removal from aqueous solution via activated commercial magnetites, 10:43868 (R;US)
Radiometric Analysis
Experience with confirmatory measurements at the Savannah River Plant, 10:43901 (R;US)

Recovery
Plutonium dissolution from Rocky Flats Plant incinerator ash, 10:43870 (R;US)
Removal
Plutonium removal from aqueous solution via activated commercial magnetites, 10:43868 (R;US)
X-Ray Fluorescence Analysis
In-line x-ray fluorescence analysis of special nuclear materials in dissolver solution: materials development, laboratory simulation and parameterization, 10:44751 (R;US)

PLUTONIUM 241
Buildup
Neutron total cross section of ^{240}Pu below 6 eV and the parameters of the 1.0-eV resonance, 10:44182 (R;US)

PLUTONIUM COMPOUNDS
See also PLUTONIUM FLUORIDES
PLUTONIUM OXIDES
PLUTONIUM SULFATES
PLUTONIUM SULFIDES
Chemical Reactions
Fourier transform infrared spectrometry using a very-long-pathlength cell: Dioxygen difluoride stability and reactions with plutonium compounds, 10:44758 (J;US)
Reaction Intermediates
Fourier transform infrared spectrometry using a very-long-pathlength cell: Dioxygen difluoride stability and reactions with plutonium compounds, 10:44758 (J;US)
Structural Chemical Analysis
Fourier transform infrared spectrometry using a very-long-pathlength cell: Dioxygen difluoride stability and reactions with plutonium compounds, 10:44758 (J;US)

PLUTONIUM DIOXIDE
Chemical Preparation
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
Density
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
Dissolution
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
Grain Size
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
Inhalation
Toxicity of inhaled $^{239}PuO_2$ in aged Beagle dogs. VI, 10:45235 (RA;US)
Sorptive Properties
Gas adsorption during storage of plutonium dioxide powders, 10:44662 (R;FR)
Storage
Gas adsorption during storage of plutonium dioxide powders, 10:44662 (R;FR)
Wet Ashing
Dissolution of plutonium dioxide by sulfuric acid digestion of plutonium-containing waste and processes for separation of plutonium from sulfuric acid solutions, 10:43815 (R;DE;In German)

PLUTONIUM FLUORIDES
Absorption Spectra
Absorption spectrum of plutonium hexafluoride in the 3000-9000 A spectral region, 10:44847 (J;GB)

PLUTONIUM OXIDES
See also PLUTONIUM DIOXIDE
Oxygen Potential
Chemical thermodynamic representations of <PuOsub(2-x)> and <Usub(1-z)Pu sub(z)Osub(w)>, 10:44679 (J;NL)
Phase Studies
Chemical thermodynamic representations of <PuOsub(2-x)> and <Usub(1-z)Pu sub(z)Osub(w)>, 10:44679 (J;NL)
Radioactive Waste Disposal
Thermodynamics of nuclear materials. Proceedings, 10:44436 (B;NL)
Thermodynamic Properties
Chemical thermodynamic representations of <PuO/sub 2-x> and <U/sub 1-z/Pu/sub z/O/sub w/>, 10:44842 (R;US)
Thermodynamics
Chemical thermodynamic representations of <PuOsub(2-x)> and <Usub(1-z)Pu sub(z)Osub(w)>, 10:44679 (J;NL)
Thermodynamics of nuclear materials. Proceedings, 10:44436 (B;NL)

PLUTONIUM SULFATES
Leaching
Dissolution of plutonium dioxide by sulfuric acid digestion of plutonium-containing waste and processes for separation of plutonium from sulfuric acid solutions, 10:43815 (R;DE;In German)

PLUTONIUM SULFIDES
Structural Chemical Analysis
Crystal data for PuS/sub 2-x/ and α-Pu_2S_3, 10:44846 (R;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNEUMATIC TRANSPORT
Economics
Tubular pneumatic conveyor pipeline. Final technical report, 10:44855 (R;US)
Mathematical Models
Report on solids transport workshop, 10:43688 (R;US)
Meetings
Report on solids transport workshop, 10:43688 (R;US)
Research Programs
Report on solids transport workshop, 10:43688 (R;US)
Safety
Safety aspects of pneumatic transport. Information Circular/1985, 10:43686 (R;US)
Test Facilities
Measurement and control of electrostatic charges on solids in a gaseous suspension. Technical progress report No. 4, 10:43691 (R;US)

PNEUMONITIS
Radioinduction
Toxicity of inhaled $^{239}PuO_2$ in aged Beagle dogs. VI, 10:45235 (RA;US)

POINT BEACH-1 REACTOR
Two Creeks, Wisconsin, USA
Radioactive Effluents
Technical evaluation of RETS-required reports for the Point Beach Nuclear Plant, Units 1 and 2, 10:44315 (R;US)

POINT BEACH-2 REACTOR
Two Creeks, Wisconsin, USA
Radioactive Effluents
Technical evaluation of RETS-required reports for the Point Beach Nuclear Plant, Units 1 and 2, 10:44315 (R;US)

POINT CONTACTS
See ELECTRIC CONTACTS

POISONING
Bench-Scale Experiments
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1984, 10:44516 (R;US)

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POISSON EQUATION
Boundary Conditions
Numerical solution of boundary condition to POISSON's equation and its incorporation into the program POISSON, 10:44957 (R;US)
Numerical Solution
Numerical solution of boundary condition to POISSON's equation and its incorporation into the program POISSON, 10:44957 (R;US)

POLARIMETERS
Design
Proton polarimeters for spin transfer experiments, 10:45582 (R;US)
Uses
Proton polarimeters for spin transfer experiments, 10:45582 (R;US)

POLARIZED BEAMS
Beam Transport
Constructing and testing a demonstration Siberian Snake, 10:44937 (R;US)

Summary of the working group on the construction and demonstration of a Siberian Snake, 10:44938 (R;US)

POLICY
See ENERGY POLICY

POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Chemical Analysis
Ecological chemistry - state-of-the-art, 10:45094 (R;DE;In German and English)
Emission
Source discharges and ambient air pollution at the coal gasifier at Kosovo, 10:43643 (BA;US)
Environmental Transport
Field experiments and observations, 10:45083 (RA;US)
Source discharges and ambient air pollution at the coal gasifier at Kosovo, 10:43643 (BA;US)

See ORGANIC POLYMERS

POLYCYCLIC AROMATIC AMINES
Metabolism
Environmental carcinogens in human target tissues in culture. Progress report, 10:45265 (R;US)
Mutagen Screening
Environmental carcinogens in human target tissues in culture. Progress report, 10:45265 (R;US)

POLYCYCLIC AROMATIC HYDROCARBONS
Deposition
Executive summary. Part I. Trace metals: executive summary, 10:45111 (RA;US)
Ecological Concentration
Executive summary. Part I. Trace metals: executive summary, 10:45111 (RA;US)
Environmental Effects
Extrapolation to health risk: use of comparative approaches, 10:43676 (BA;US)
Environmental Exposure Pathway
Extrapolation to health risk: use of comparative approaches, 10:43676 (BA;US)
Environmental Impacts
Approaches to modeling the fate and effects of toxicants in pelagic systems, 10:45170 (R;US)
Environmental Transport
Approaches to modeling the fate and effects of toxicants in pelagic systems, 10:45170 (R;US)
Risk Assessment
Extrapolation to health risk: use of comparative approaches, 10:43676 (BA;US)

POLYCYCLIC NITRO COMPOUNDS
Metabolism
Environmental carcinogens in human target tissues in culture. Progress report, 10:45265 (R;US)
Mutagen Screening
Environmental carcinogens in human target tissues in culture. Progress report, 10:45265 (R;US)

POLYESTERS
Adhesion
Fatigue testing of adhesive bonding between steel and glass-fiber reinforced polyester. Report until December 1982, 10:44601 (R;DK;In Danish)
Physical Radiation Effects
Nuclear ultrafilters, 10:44691 (R;SU;In Russian)

POLYETHERS
See POLYETHYLENE GLYCOLS

POLYETHYLENE GLYCOLS
Extraction Chromatography
Fundamental studies of separation processes. Technical progress report, 10 August 1984-16 July 1985, 10:44797 (R;US)
Retention Functions
Fundamental studies of separation processes. Technical progress report, 10 August 1984-16 July 1985, 10:44797 (R;US)

POLYETHYLENE OXIDES
See POLYETHYLENE GLYCOLS

POLYETHYLENE TERPHTHALATE
See POLYESTERS

POLYETHYLENES
Chemical Preparation
Applications of functionalized polymers in catalysis. Progress report, September 1, 1977-June 1, 1978, 10:44798 (R;US)
Decomposition
Study of the unimolecular decomposition of the $(C_8H_4)^+_2$ complex, 10:44809 (J;US)
NMR Spectra
Deuterium NMR of deuterated probes dissolved in stretched polyethylene, 10:44802 (RA;IL)
Photoionization
Study of the unimolecular decomposition of the $(C_8H_4)^+_2$ complex, 10:44809 (J;US)

POLY(ISOBUTYLENE OXIDE)
See EPOXIDES
ORGANIC POLYMERS

POLYMER FLOODING
See MICROEMULSION FLOODING
WATERFLOODING

POLYMERS
See also ORGANIC POLYMERS
Mechanical Properties
Methodology for determining mechanical properties of polymers, 10:44694 (RA;US)
Molecular and microstructural factors affecting mechanical properties of polymeric cover plate materials, 10:44093 (R;US)
Molecular Structure
Configurational diffusion in semidilute solutions, 10:45400 (R;US)
Order-Disorder Transformations
Role of long-wavelength degrees of freedom in the rod-to-coil transition in polymers, 10:44695 (J;US)
Photoconductivity
Extension of electronic transport properties of polymer dielectrics to severe environments encountered in systems, 10:44693 (R;US)
Physical Radiation Effects
Extension of electronic transport properties of polymer dielectrics to severe environments encountered in systems, 10:44693 (R;US)
Research Programs
Methodology for determining mechanical properties of polymers, 10:44694 (RA;US)

POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS

POLYPLOIDY
Biological Effects
Morphological and fertility responses in isogenic triploid and hexaploid pearl millet x napiergrass hybrids (Pennisetum americanum (L.) Leeke; Pennisetum purpureum Schum), 10:45214 (J;US)

BEST COPY AVAILABLE
FOR REPRODUCTION

POLYSTYRENE
Chemical Preparation
Applications of functionalized polymers in catalysis. Progress report, September 1, 1977-June 1, 1978, 10:44798 (R;US)
Extraction Chromatography
Fundamental studies of separation processes. Technical progress report, 10 August 1984-16 July 1985, 10:44797 (R;US)

Neoplasms
Extrapolation to health risk: use of comparative approaches, 10:43676 (BA;US)
POROUS MATERIALS
Compacting
Theory for dynamic compaction of wet porous solids, 10:45297 (R;US)
Convection
New method of fluid velocity measurement in porous media, 10:45295 (RA;US)
Heat Transfer
New method of fluid velocity measurement in porous media, 10:45295 (RA;US)
Hydrostatics
Theory for dynamic compaction of wet porous solids, 10:45297 (R;US)
Radionuclide Migration
Migration of radionuclides in porous media. Analysis of experimental data, 10:45141 (R;CA)
Thermodynamic Properties
Thermomechanical theory for a porous anisotropic elastic solid with inclusions, 10:44732 (J;DE)
Two-Phase Flow
Mechanism of oil bank formation, coalescence in porous media and emulsion stability. Final report, 10:43717 (R;US)
POSITRON COMPUTED TOMOGRAPHY
Dead Time
Dead time correction and counting statistics for positron tomography, 10:45204 (J;GB)
POSTULATED PARTICLES

HEAVY LEPTONS
MAGNETIC MONOPOLES
QUARKS
Electron-Positron Interactions
Spinless bosons in electron-positron annihilation, 10:45516 (R;DE)
POTASSIUM
Catalytic Effects
Silica-supported iron nitride in Fischer-Tropsch reactions. II. Comparison of the promotion effects of potassium and nitrogen on activity and selectivity, 10:43939 (J;US)
POTASSIUM ALLOYS
Impurities
Investigation into fields of oxygen thermodynamic activity in a sodium-potassium coolant by emf method, 10:44602 (R;SU;In Russian)
Oxygen Potential
Investigation into fields of oxygen thermodynamic activity in a sodium-potassium coolant by emf method, 10:44602 (R;SU;In Russian)
Purification
Investigation into fields of oxygen thermodynamic activity in a sodium-potassium coolant by emf method, 10:44602 (R;SU;In Russian)
POTASSIUM CARBONATES
Catalytic Effects
Seed regeneration processes for coal fired MHD power plants, 10:44509 (R;US)
POTASSIUM IONS
Beam Production
Alumino-silicate ion sources for accelerator applications, 10:44978 (R;US)
POTASSIUM PHOSPHATES
Nonlinear Optics
Optical characterization of nonlinear crystals. Final report, January 15, 1984-September 30, 1984, 10:44720 (R;US)
Refractivity
Optical characterization of nonlinear crystals. Final report, January 15, 1984-September 30, 1984, 10:44720 (R;US)
POTASSIUM SULFATES
Phase Diagrams
Study of alkali- and sulfur-enhanced corrosion of advanced energy systems. Final report, 10:44510 (R;US)
POWDER METALLURGY
Meetings
1982 national powder metallurgy conference proceedings, 10:44657 (B;US)
POWDERS
Compression
Influence of shock compression on the specific surface area of inorganic powders (alumina, manganese dioxide, hematite and magnetite), 10:44784 (R;US)
POWER DEMAND
Mathematical Models
Estimating response to time-of-use rates: implications of the homothetic separability assumption. Final report, 10:44504 (R;US)
POWER GENERATION
See also COGENERATION
Research Programs

Air Cleaning Systems
Analyses of charcoal filters used in monitoring radioactive iodines, 10:44289 (RA;US)

Loose Parts Monitoring
Characteristics and performance experience of loose-part monitoring systems in US commercial power reactors, 10:44293 (R;US)

POWER SUBSTATIONS
Term is used for an assembly of equipment in an electric power system for the transmission, transformation, or switching of electric energy.

Electrical Insulation
Polysil structures. Final report, 10:44706 (R;US)

Environmental Impacts
Draft supplement to the environmental statement, fiscal year 1976 proposed program. Facility location evaluation for Horse Heaven Hills Area Service (Horse Heaven Substation) study area 75-7, 10:44170 (R;US)
Draft supplement to the environmental statement, fiscal year 1976 proposed program. Facilty location evaluation for Franklin-Badger Canyon 230-kV line and Badger Canyon Substation study area 74-6B, 10:44169 (R;US)
Draft supplement to the environmental statement, fiscal year 1976 proposed program. Facility location evaluation for Okanogan Area Service study area 75-6, 10:44171 (R;US)

POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
See also INTERCONNECTED POWER SYSTEMS

Safety Engineering
Mine power system safety and reliability improvement. Part 1. Report for 28 September 1979-30 September 1981, 10:44909 (R;US)

POWER TRANSMISSION

Research Programs
1984 research and development yearbook, 10:44463 (R;US)

Stabilization
Unified active and reactive power modulation of HVDC systems: evaluation of controller design and robustness, 10:44154 (R;US)

POWER TRANSMISSION LINES

Electrical Faults
Evaluation of ultrahigh-speed relay algorithms. Final report, 10:44177 (R;US)

Electrical Insulation
Polysil structures. Final report, 10:44706 (R;US)

Electromagnetic Pulses
EMP-induced, time-domain grazing solution for an infinite wire over the ground, 10:45067 (R;US)

Environmental Impacts
Draft supplement to the environmental statement, fiscal year 1976 proposed program. Facilty location evaluation for Franklin-Badger Canyon 230-kV line and Badger Canyon Substation study area 74-6B, 10:44169 (R;US)
Draft supplement to the environmental statement, fiscal year 1976 proposed program. Facility location evaluation for Okanogan Area Service study area 75-6, 10:44171 (R;US)
Draft supplement, Final Environmental Impact Statement, proposed fical year 1979 program. Facility planning supplement: southwest Oregon area service, 10:44173 (R;US)
Draft supplement to the environmental statement, fiscal year 1977 proposed program. Facility location evaluation for West Burley Service Study Area 75-9, 10:44172 (R;US)

Repair
Study of a component evaluation unit for remote maintenance of transmission lines, 10:44179 (R;US)

PRASEODYMIUM 141 TARGET

Neutron Reactions
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)

PRASEODYMIUM PHOSPHATES

Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

Raman Spectroscopy
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

X-Ray Diffraction
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

PRECIPITATION SCAVENGING
Oxidizing and Scavenging Characteristics of April Rains - OSCAR data report, 10:45079 (R;US)

PRECIPITATIONS (ATMOSPHERIC)
See ATMOSPHERIC PRECIPITATIONS

PRECOMPOUND-NUCLEUS EMISSION

Computer Calculations
Application of nuclear model computer codes to nuclear data calculations, 10:45690 (RA;XA)

Fission Barrier
Recent advances in nuclear model code developments, 10:45689 (RA;XA)

Reviews
Critical review of precompound models, 10:45691 (RA;XA)

PREEQUILIBRIUM NUCLEAR PROCESSES
See PRECOMPOUND-NUCLEUS EMISSION

PREHEATING
See HEAT TREATMENTS

PRESSURE TUBES

Deformation
Ballooning of thin-walled tubes with an azimuthal temperature gradient, 10:44287 (R;CA)

Extrusion
Final report on development evaluation of Task Group 3 pressure tubes, 10:44251 (R;CA)

PRESSURE VESSELS

Acoustic Emission Testing
Acoustic emission/flaw relationship for in-service monitoring of nuclear pressure vessels. Progress report, October 1984-March 1985. Volume 1, 10:44239 (R;US)

Cladding
Fracture properties of a neutron-irradiated stainless steel submerged arc weld cladding overlay, 10:44186 (R;US)

Crack Propagation
Flaw preparations for HSST program vessel fracture mechanics testing: mechanical-cyclic pumping and electron-beam weld-hydrogen-charge cracking schemes, 10:44375 (R;US)

Cracks
Two finite element techniques for computing mode I stress intensity factors in two- or three-dimensional problems, 10:44295 (R;US)

Fatigue
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)

Fracture Mechanics
Pressure vessel fracture studies pertaining to the PWR thermal-shock issue: experiment TSE-7, 10:44414 (R;US)

BEST COPY AVAILABLE
FOR REPRODUCTION

Materials Testing
Development of a standard test for measuring k/sub Ia/ with a modified compact specimen, 10:44901 (R;US)
Mechanical Vibrations
Identification of the oscillation behavior and system parameter estimation of pressure and core vessel of nuclear power plant BIBLIS-A, 10:44439 (TG;US)
Physical Radiation Effects
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Research Programs
Heavy-Section Steel Technology Program quarterly progress report, July-September 1980, 10:44296 (R;US)
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Stress Analysis
Flaw preparations for HSST program vessel fracture mechanics testing: mechanical-cyclic pumping and electron-beam weld-hydrogen-charge cracking schemes, 10:44375 (R;US)

PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS

PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS

PRIMARY COOLANT CIRCUITS
Cracks
COD concept and its application to fracture mechanical evaluation of cracked components, 10:44339 (R;DE;In German)
Deposits
Silicon compound formation in liquid sodium, 10:44259 (R;US)
Hydraulics
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44364 (R;DE)
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44365 (R;DE;In German)
Mass Transfer
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44364 (R;DE)
Two-phase flow through small branches in a horizontal pipe with stratified flow, 10:44365 (R;DE;In German)
Pipes
Probability of pipe fracture in the primary coolant loop of a PWR Plant. Volume 3. Nonseismic stress analysis. Load Combination Program, Project I final report, 10:44407 (R;US)
Pressure Dependence
Conception of a modular HTR-process heat facility with optimization of the pressure level, 10:44281 (R;DE;In German)
Pressure Drop
Method of predicting pressure profiles in horizontal 37-element clusters, 10:44888 (R;CA)
Stress Corrosion
Investigation of corrosion and stress corrosion cracking in bolting materials on light water reactors, 10:44215 (R;US)
Water Chemistry
Investigation of corrosion and stress corrosion cracking in bolting materials on light water reactors, 10:44215 (R;US)
Review of the relation of coolant chemistry to crud deposition on light water reactor fuel, 10:44193 (RA;US)

PRINCETON LARGE TORUS
See PLT DEVICES

PROBABILITY
Lectures
Lectures on probability and statistics. Revision, 10:45917 (R;US)

PROCESS SOLUTIONS
Quantitative Chemical Analysis
Determination of hydrazoic acid in the solutions of the Purex process, 10:43817 (R;FR;In French)

PROCESSING (DATA)
See DATA PROCESSING

PRODUCER GAS
130 to 140 Btu/ft³.
Combustion
Charcoal gasification, 10:43921 (RA;US)
First workshop on biomass and coal conversion programs of the USAID/GOI Alternative Energy Resources Development Project. Report on trip to India, November 7-19, 1983, 10:43699 (R;US)
Production
Charcoal gasification, 10:43921 (RA;US)

PRODUCTION (HYDROGEN)
See HYDROGEN PRODUCTION

PRODUCTION (ISOTOPE)
See ISOTOPE PRODUCTION

PROJECT (CASTLE)
See CASTLE PROJECT

PROJECT (CROSSROADS)
See CROSSROADS PROJECT

PROJECT (DOMINIC)
See DOMINIC PROJECT

PROJECTILES
Acceleration
Description of a new 63-mm diameter gas gun facility, 10:44902 (R;US)
Aerodynamics
Six degree of freedom simulation of fluid payload projectiles using numerically computed fluid moments, 10:45051 (R;US)

PROPADIENE
See ALLENE

PROPANE
Data Compilation
Petroleum Supply Monthly, June 1985, 10:43727 (R;US)
Sales
Petroleum Marketing Monthly, 10:43728 (R;US)

PROPENE
See PROPYLENE

PROPERTIES (MECHANICAL)
See MECHANICAL PROPERTIES

PROPORTIONAL COUNTERS
Performance
Evaluation of a high-pressure proportional counter for the detection of radioactive noble gases. Master's thesis, 10:44734 (R;US)

PROPYLENE
Decomposition
Study of the unimolecular decompositions of the $(C_3H_6)^+_2$ and $(c\text{-}C_3H_6)^+_2$ complexes, 10:44808 (J;US)

PROPYLENE CARBONATE
See CARBONIC ACID ESTERS

PROTACTINIUM
Energy Levels
Study of optical properties of protactinium IV ($5f^1$) in $ThBr_4$ and $ThCl_4$ matrices, 10:44844 (R;FR;In French)
Optical Properties
Study of optical properties of protactinium IV ($5f^1$) in $ThBr_4$ and $ThCl_4$ matrices, 10:44844 (R;FR;In French)

PROTECTION
See SAFETY

PROTECTION (RADIATION)
See RADIATION PROTECTION

PROTEINS
Crystal Structure
Characterization of two crystal forms of neutrophil cationic protein NP2, a naturally occurring broad-spectrum antimicrobial agent from leukocytes, 10:45194 (J;GB)

PROTON REACTIONS
Continuum spectra in proton- and neutron-induced reactions, 10:45580 (RA;XA)
Analyzing Power
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Capture
Atomic states in nonelastic scattering processes, 10:45494 (RA;DE)
Charge-Exchange Reactions
Investigation of the reaction $^{16}O(p,n)^{16}F$ at Esub(p)=135 MeV, 10:45607 (R;SU)

BEST COPY AVAILABLE
FOR REPRODUCTION

Deuteron Spectra
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Elastic Scattering
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei, 10:45603 (R;FR)
Impulse Approximation
Three-body approach to the d(N, 2N)N reaction, 10:45588 (R;SU;In Russian)
Inclusive Interactions
Violation of Feynman scaling in yields of hadron beam fragments from nucleons and nuclei, 10:45492 (RA;DE)
Inelastic Scattering
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
Intermediate Resonance
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
Knock-Out Reactions
Three-body approach to the d(N, 2N)N reaction, 10:45588 (R;SU;In Russian)
Particle Production
Prompt single muon production by protons on iron, 10:45446 (RA;PL)
Polarized Beams
Collaboration on medium energy measurements of N-N parameters. Progress report, January 1-December 31, 1980, 10:45585 (R;US)
Search for a possible systematic trend of optical model parameters from 800 MeV polarized protons elastic scattering on light nuclei, 10:45603 (R;FR)

PROTON-ANTIPROTON INTERACTIONS
Annihilation
Investigation of the anti pp->anti ΛΛ reaction near threshold at LEAR, 10:45439 (RA;DE)
Resonance production in anti pp annihilations at rest in H_2 gas and search for new resonant states, 10:45437 (RA;DE)
CP Invariance
Hardware processor for on-line event reconstruction, 10:45014 (R;CH)
Differential Cross Sections
Antiproton-proton cross sections in the momentum range from 150 to 600 MeV/c, 10:45438 (RA;DE)
Diffraction
Elastic slopes and diffraction, 10:45512 (R;FR)
Elastic Scattering
Approach of p anti p and pp elastic scattering to 'asymptopia', 10:45525 (J;NL)
Elastic slopes and diffraction, 10:45512 (R;FR)
Energy dependence of proton-proton and antiproton-proton scattering at the CERN intersecting storage rings, 10:45452 (R;NL)
Inclusive Interactions
Light gluino scenario, 10:45471 (R;DE)
Measurement of π^0 inclusive production cross sections in proton-antiproton interactions at $\sqrt{s}$=540 GeV at CERN, 10:45453 (R;FR;In French)
Inelastic Scattering
Investigation of the anti pp->anti ΛΛ reaction near threshold at LEAR, 10:45439 (RA;DE)
Particle Production
Measurement of π^0 inclusive production cross sections in proton-antiproton interactions at $\sqrt{s}$=540 GeV at CERN, 10:45453 (R;FR;In French)
Study of particle production at 90 degrees in proton-antiproton interactions at the CERN SPS collider, 10:45414 (R;FR;In French)
Prompt Gamma Radiation
High Psub(T) prompt photons in pp and p anti p collisions as a test of perturbative QCD, 10:45509 (R;FR)
Reviews
Physics at the pp-bar collider, 10:45443 (RA;PL)
Supersymmetry
Light gluino scenario, 10:45471 (R;DE)
Total Cross Sections
anti pp scattering experiments at LEAR, 10:45436 (RA;DE)
Antiproton-proton cross sections in the momentum range from 150 to 600 MeV/c, 10:45438 (RA;DE)
Trigger Circuits
Hardware processor for on-line event reconstruction, 10:45014 (R;CH)

PROTON-INDUCED X-RAY EMISSION ANALYSIS
See PIXE ANALYSIS

PROTONIUM
De-Excitation
Atomic cascade of anti pp atoms stopped in H_2 gas and their angular momentum state at annihilation, 10:45429 (RA;DE)

PROTON-NEUTRON INTERACTIONS
Potential Scattering
W-matrix: A new method for solving the two-body problem, 10:45752 (R;DE)

PROTON-PROTON INTERACTIONS
Diffraction
Diffractive dissociation in pp→Δ^{++} π^- p. 2. Slope-mass-partial wave correlation, 10:45465 (R;BR)
Elastic Scattering
Approach of p anti p and pp elastic scattering to 'asymptopia', 10:45525 (J;NL)
Energy dependence of proton-proton and antiproton-proton scattering at the CERN intersecting storage rings, 10:45452 (R;NL)
Inclusive Interactions
Violation of Feynman scaling in yields of hadron beam fragments from nucleons and nuclei, 10:45492 (RA;DE)
Partial Waves
Diffractive dissociation in pp→Δ^{++} π^- p. 2. Slope-mass-partial wave correlation, 10:45465 (R;BR)
Particle Production
Hadroproduction of charmed particles, 10:45506 (RA;PL)
Study of charm production in proton-proton interactions at $\sqrt{s}$ = 62 GeV with a forward K-trigger, 10:45463 (D;US)
Prompt Gamma Radiation
High Psub(T) prompt photons in pp and p anti p collisions as a test of perturbative QCD, 10:45509 (R;FR)
Reviews
Review of accelerator and particle physics at the CERN intersecting storage rings, 10:44929 (R;XC)

PROTONS
Lifetime
Review of proton lifetime experiments, 10:45445 (RA;PL)
Particle Decay
Review of proton lifetime experiments, 10:45445 (RA;PL)
Structure Functions
Neutron and proton structure functions from inelastic antineutrino scattering in deuterium, 10:45448 (RA;PL)

PULMONARY CANCER
See CARCINOMAS

PULMONARY LAVAGE
See LUNGS

PULSE COMBUSTORS
Combustion Kinetics
Pulsating burners - controlling mechanisms and performance. Annual report, December 1, 1983-November 30, 1984, 10:44921 (R;US)
Control
Pulsating burners - controlling mechanisms and performance. Annual report, December 1, 1983-November 30, 1984, 10:44921 (R;US)

PULVERIZED FUEL ASH
See FLY ASH

PUMPS
Failures
Suction effects on feedpump performance: a literature survey (Problems in feedwater system), 10:44164 (R;US)

BEST COPY AVAILABLE
FOR REPRODUCTION

Performance
Suction effects on feedpump performance: a literature survey (Problems in feedwater system), 10:44164 (R;US)
Reliability
Suction effects on feedpump performance: a literature survey (Problems in feedwater system), 10:44164 (R;US)
PURINES
Metabolism
Differential toxicity of 3-aminobenzamide to wild-type and 6-thioguanine-resistant Chinese hamster cells by interference with pathways of purine biosynthesis, 10:45195 (J;NL)
PWR TYPE REACTORS

Acoustic Monitoring
Dual-channel spectral analyzer, 10:45017 (RA;CS;In Czech)
Comparative Evaluations
Economics of an advanced pressurized water reactor (APWR), 10:44231 (R;DE;In German)
Containment Buildings
Effect of transverse venting on flame acceleration and transition to detonation in a large channel, 10:44428 (R;US)
Integrity of containment penetrations under severe accident conditions. FY84 annual report, 10:44412 (R;US)
Containment Systems
Final results of the Hydrogen Igniter Experimental Program, 10:44411 (R;US)
Control Rooms
Human engineering guidelines for the evaluation and assessment of Video Display Units, 10:44312 (R;US)
Economics
Economics of an advanced pressurized water reactor (APWR), 10:44231 (R;DE;In German)
Engineered Safety Systems
Final results of the Hydrogen Igniter Experimental Program, 10:44411 (R;US)
Fuel Assemblies
Demonstration of the VANTAGE 5 fuel design, 10:44229 (RA;US)
Design and demonstration of the Fragema advanced fuel assembly (AFA), 10:44228 (RA;US)
Development of BWR 9 x 9 fuel assemblies and general trends in advanced design of LWR reload fuel, 10:44205 (RA;US)
Performance of Exxon Nuclear Company fuel in light water reactors, 10:44198 (RA;US)
Review of the relation of coolant chemistry to crud deposition on light water reactor fuel, 10:44193 (RA;US)
Fuel Cans
Corrosion and hydriding of Zircaloy fuel rod cladding in 633K water and reactor environments, 10:44189 (RA;US)
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
In-reactor corrosion and crud deposition data on Fragema fuel, 10:44190 (RA;US)
Temperature escalation in PWR fuel rod simulators due to the zircaloy/steam reaction ESSI-4 ESSI-11, 10:44360 (R;DE)
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Fuel Management
Development of BWR 9 x 9 fuel assemblies and general trends in advanced design of LWR reload fuel, 10:44205 (RA;US)
Performance of Exxon Nuclear gadolinia-bearing fuel in pressurized water reactors, 10:44224 (RA;US)
Fuel Rods
Analysis of thermomechanical behavior of UO_2 Gd_2O_3 fuel under irradiation conditions, 10:44225 (RA;US)
Blowdown Heat Transfer Separate-Effects Program. Quarterly progress report, October-December 1980, 10:44401 (R;US)
Evaluation of high burnup fission gas release data, 10:44220 (RA;US)
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Fission gas release from PWR fuel rods at extended burnups, 10:44218 (RA;US)
Fission gas release of PWR fuel under steady and transient conditions up to high burnup, 10:44219 (RA;US)
Fuel behavior, fission product release and cladding deformation during the CANSAR, PCI-related experiment, 10:44227 (RA;US)
Fuel performance evaluation and improved fuel utilization by pool-site fuel services, 10:44197 (RA;US)
International super-ramp project at Studsvik, 10:44203 (RA;US)
Light-water-reactor safety research program. Quarterly progress report, January-March 1980, 10:44384 (R;US)
Materials development and irradiation testing of a boride integral fuel burnable absorber, 10:44222 (RA;US)
Mechanisms of fission gas release from different types of fuel rods during normal operation: results and analysis of CONTACT experiments, 10:44221 (RA;US)
Performance of Exxon Nuclear gadolinia-bearing fuel in pressurized water reactors, 10:44224 (RA;US)
Ramp test behavior of high burnup PWR fuel rods, 10:44226 (RA;US)
Release and migration of fission products in high burnup fuel, 10:44217 (RA;US)
Fuel-Cladding Interactions
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
International super-ramp project at Studsvik, 10:44203 (RA;US)
Heat Transfer
Transient testing of an in-core impedance flow sensor in a 9-rod heated bundle, 10:44394 (R;US)
High Pressure Coolant Injection
Experiences from the Nordic Benchmark analyses, 10:44353 (RA;US)
Level Indicators
Advanced Two-Phase Flow Instrumentation Program. Quarterly progress report, January-March 1981. Volume 1, 10:44408 (R;US)
Loss of Coolant
Blowdown Heat Transfer Separate-Effects Program. Quarterly progress report, October-December 1980, 10:44401 (R;US)
Comparison of the TRAC calculational results for the Slab Core Test Facility model and the reference German pressurized water reactor during reflood. Annual report, 1984, 10:44396 (R;US)
Experiment data report for LOFT nuclear small break experiment L3-5/L3-5A, 10:44385 (R;US)
Fabrication of sensors for high-temperature steam instrumentation systems, 10:44377 (R;US)
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
ORNL small-break LOCA heat transfer test series I: rod bundle heat transfer analysis, 10:44402 (R;US)
ORNL small-break LOCA heat transfer test series I: high-pressure reflood analysis, 10:44404 (R;US)
Pressure vessel fracture studies pertaining to the PWR thermal-shock issue: experiment TSE-7, 10:44414 (R;US)

PWR loss-of-coolant accident analysis capability of the WRAP-EM system, 10:44383 (R;US)
Slab Core Test Facility steam supply design analysis with TRAC, 10:44397 (R;US)
Thermal-shock-resistant cermet insulators, 10:44409 (R;US)
Thermocouple signal sensitivity to the sheath thickness of thermal-hydraulic test facility indirectly heated electric fuel pin simulators, 10:44376 (R;US)
TRAC-PD2: advanced best-estimate computer program for pressurized water reactor loss-of-coolant accident analysis, 10:44403 (R;US)
Transient testing of an in-core impedance flow sensor in a 9-rod heated bundle, 10:44394 (R;US)
TRAP: plotting package for TRAC (Transient Reactor Analysis), 10:44381 (R;US)
Two-phase flow measurements with advanced instrumented spool pieces, 10:44379 (R;US)
Water Reactor Safety Research Division. Quarterly progress report, July 1-September 30, 1980, 10:44389 (R;US)
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)

Meltdown
Experimental investigation of hydrodynamic fragmentation of gallium droplets in water flow, 10:44356 (R;DE;In German)

Molten Metal-Water Reactions
Experimental investigation of hydrodynamic fragmentation of gallium droplets in water flow, 10:44356 (R;DE;In German)

Neutron Absorbers
Irradiation behavior of neutron absorber materials in Combustion Engineering's burnable poison and control elements, 10:44223 (RA;US)

Pipes
Evaluation of cracking in feedwater piping adjacent to the steam generators in Nine Pressurized Water Reactor Plants, 10:44232 (R;US)

Plutonium 241
Neutron total cross section of ^{240}Pu below 6 eV and the parameters of the 1.0-eV resonance, 10:44182 (R;US)

Pressure Vessels
Acoustic emission/flaw relationship for in-service monitoring of nuclear pressure vessels. Progress report, October 1984-March 1985. Volume 1, 10:44239 (R;US)
Flaw preparations for HSST program vessel fracture mechanics testing: mechanical-cyclic pumping and electron-beam weld-hydrogen-charge cracking schemes, 10:44375 (R;US)
Fracture properties of a neutron-irradiated stainless steel submerged arc weld cladding overlay, 10:44186 (R;US)
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Pressure vessel fracture studies pertaining to the PWR thermal-shock issue: experiment TSE-7, 10:44414 (R;US)

Primary Coolant Circuits
Investigation of corrosion and stress corrosion cracking in bolting materials on light water reactors, 10:44215 (R;US)
Probability of pipe fracture in the primary coolant loop of a PWR Plant. Volume 3. Nonseismic stress analysis. Load Combination Program, Project I final report, 10:44407 (R;US)
Review of the relation of coolant chemistry to crud deposition on light water reactor fuel, 10:44193 (RA;US)

Radioactive Aerosols
Modelisation of soluble aerosols behaviour in the atmosphere of a PWR nuclear reactor in case of accident, 10:44216 (R;FR;In French)

Radioactive Effluents
Radioactive materials released from nuclear power plants, 10:44319 (R;US)

Reactor Accidents
Effect of transverse venting on flame acceleration and transition to detonation in a large channel, 10:44428 (R;US)
Licensee Event Report (LER) compilation, June 1985. Volume 4, No. 6, 10:44400 (R;US)

Reactor Cores
Thermal-shock-resistant cermet insulators, 10:44409 (R;US)

Reactor Materials
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Nature of corrosion films in simulated LWR water. Final report, 10:44230 (R;US)
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)

Reactor Operation
Licensee Event Report (LER) compilation, June 1985. Volume 4, No. 6, 10:44400 (R;US)

Reactor Operators
Psychological scaling of expert estimates of human error probabilities: application to nuclear power plant operation, 10:44429 (R;US)

Reactor Safety
Criteria for safety-related nuclear power plant operator actions: initial pressurized water reactor (PWR) simulator exercises, 10:44393 (R;US)
Light-water-reactor safety research program. Quarterly progress report, January-March 1980, 10:44384 (R;US)
Water Reactor Safety Research Division. Quarterly progress report, July 1-September 30, 1980, 10:44389 (R;US)

Risk Assessment
Determination of several LWR realistic success criteria for probabilistic risk assessment. Final report, 10:44346 (R;US)
Experiences from the Nordic Benchmark analyses, 10:44353 (RA;US)
Large-scale reliability analysis by decomposition and integration, 10:44351 (RA;US)

Service Life
Longevity of nuclear power systems. Final report, 10:44211 (R;US)

Steam Generators
Eddy-current inspection for Steam Generator Tubing Program. Quarterly progress report for period ending March 31, 1981. Volume 1, 10:44237 (R;US)
Eddy-current inspection for steam generator tubing program. Quarterly progress report, March 31, 1980, 10:44234 (R;US)
Eddy-current inspection for steam generator tubing program. Annual progress report, December 31, 1980, 10:44236 (R;US)
Evaluation of condensation-induced water hammer in preheat steam generators, 10:44233 (R;US)
Water Reactor Safety Research Division quarterly progress report, January 1-March 31, 1980, 10:44378 (R;US)

PYRANS

Stimulated Emission
Correlation between the possibility of laser action and the oscillator strength of the fluorescent transition: pyrylium salts, 10:44885 (TJ;US)

PYRENE

Biological Effects
Biological effects summary report: pyrene, 10:45257 (R;US)

Carcinogen Screening
Studies on the tumor initiating, tumor promoting, and tumor co-initiating properties of respiratory carcinogens, 10:45259 (R;US)

Health Hazards
Biological effects summary report: pyrene, 10:45257 (R;US)

Hydrogenation
Coal liquefaction research. Semiannual report, October 1983-March 1984, 10:43635 (R;US)
Coal liquefaction via low temperature, low pressure water-gas shift solvent hydrogenation, 10:43636 (R;US)
Maximum Permissible Exposure
Biological effects summary report: pyrene, 10:45257 (R;US)
Metabolism
Biological effects summary report: pyrene, 10:45257 (R;US)
Tissue Distribution
Biological effects summary report: pyrene, 10:45257 (R;US)
PYRIDINES

QUAD CITIES-2 REACTOR
Cordova, Illinois, USA
Fuel Assemblies
Large scale demonstration of barrier fuel, 10:44207 (RA;US)
QUADRUPOLE LINACS
Beam Optics
Scheme to funnel ion beams with a radio-frequency quadrupole, 10:44954 (R;US)
Beam Transport
Scheme to funnel ion beams with a radio-frequency quadrupole, 10:44954 (R;US)
QUALITY ASSURANCE
Manuals
Savannah River Laboratory quality assurance manual. Revision 2, 10:45902 (R;US)
QUALITY FACTOR
Frequency Dependence
Quality factor in earth crust by analysis and modelling of Lg waves, 10:45298 (R;FR;In French)
QUANTIZATION
Non-Abelian Bohm-Aharonov effect in geometric quantization, 10:45753 (R;FR)
QUANTUM CHROMODYNAMICS
Chiral Symmetry
Pattern of chiral symmetry breaking in quantum chromodynamics, 10:45531 (RA;PL)
Electron-Positron Interactions
Jets in e^+e^- annihilation and QCD, 10:45502 (RA;PL)
Factorization
Diagrammatic mass factorization, 10:45503 (RA;PL)
Form Factors
Infrared regularization dependence of the asymptotic behavior of the Sudakov form factor in QCD, 10:45515 (R;DE)
Intermediate Bosons
Missing energy sources at large Psub(T) from standard QCD processes, 10:45757 (R;FR)
Kaon Plus-Proton Interactions
Weak pion production with kaons, 10:45488 (RA;DE)
Lattice Field Theory
Improved continuum limit lattice action for QCD with Wilson fermions, 10:45469 (R;DE)
Iterative hopping expansion algorithm for Monte Carlo calculations with very light fermions, 10:45548 (R;DE)
Perturbation Theory
Perturbative QCD beyond "classical" problems, 10:45559 (RA;PL)
Spin physics at short distances as a means of studying QCD, 10:45501 (RA;PL)
Spin Orientation
Spin physics at short distances as a means of studying QCD, 10:45501 (RA;PL)
Symmetry Breaking
Pattern of chiral symmetry breaking in quantum chromodynamics, 10:45531 (RA;PL)
Weak Hadronic Decay
Kaon decays and a determination of the scale of chiral symmetry, 10:45485 (RA;DE)
QUANTUM ELECTRODYNAMICS
Electromagnetic Form Factors
Sudakov form factor beyond the leading logarithmic approximation, 10:45517 (R;DE)
QUANTUM FIELD THEORY

Chemical Reactions
Silicon compound formation in liquid sodium, 10:44259 (R;US)
Corrosion
Growth and breakdown of passive films on metal surfaces, 10:44290 (R;US)
Embrittlement
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Fatigue
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)

Fracture Properties
COD concept and its application to fracture mechanical evaluation of cracked components, 10:44339 (R;DE;In German)
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Materials Testing
Development of a standard test for measuring k/sub Ia/ with a modified compact specimen, 10:44901 (R;US)
Oxidation
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Physical Radiation Effects
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Radiation Effects
Radiation data for design and qualification of nuclear plant equipment. Final report, 10:44291 (R;US)
Research Programs
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Standards
Nuclear standards master index, 10:44282 (R;US)
Stress Corrosion
Nature of corrosion films in simulated LWR water. Final report, 10:44230 (R;US)
Phenomenological model for stress corrosion cracking of Types 316NG and 316 stainless steel (BWR), 10:44184 (R;US)
Surface Properties
Growth and breakdown of passive films on metal surfaces, 10:44290 (R;US)

REACTOR OPERATION
Data Compilation
Licensee Event Report (LER) compilation, June 1985. Volume 4, No. 6, 10:44400 (R;US)
Fault Tree Analysis
Phased mission analysis of maintained systems. A study in reliability and risk analysis, 10:44343 (R;NL)

REACTOR OPERATORS
Human Factors
Psychological scaling of expert estimates of human error probabilities: application to nuclear power plant operation, 10:44429 (R;US)
Performance
Criteria for safety-related nuclear power plant operator actions: initial pressurized water reactor (PWR) simulator exercises, 10:44393 (R;US)
Reliability
Psychological scaling of expert estimates of human error probabilities: application to nuclear power plant operation, 10:44429 (R;US)

REACTOR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text book, etc.
Evaluation of nuclear data and their uncertainties, 10:45570 (RA;XA)

REACTOR PROTECTION SYSTEMS
Errors
Probabilistic assessment and design of overpower trips in CANDU reactors, 10:44332 (R;CA)
Reliability
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Trojan Nuclear Power Plant, 10:44432 (R;US)
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the Beaver Valley Nuclear Power Station, Unit 1, 10:44431 (R;US)
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the San Onofre Nuclear Power Station, Unit 1, 10:44430 (R;US)

REACTOR SAFETY
Human Factors
Criteria for safety-related nuclear power plant operator actions: initial pressurized water reactor (PWR) simulator exercises, 10:44393 (R;US)
Information Systems
Reactor Safety Assessment System: a situation assessment aid for USNRC emergency response, 10:44345 (R;US)
Meetings
5th international meeting on thermal nuclear reactor safety. Proceedings. Vol. 1, 10:44367 (R;DE)
Research Programs

REPROCESSING
Comparative Evaluations
Plutonium and U-233 mines, 10:43814 (R;CA)

RESCUE OPERATIONS
Training
Training programmes and experiences of medical emergency preparedness for radiation accident in Japan, 10:45283 (RA;IN)

RESEARCH PROGRAMS
To be used jointly with descriptor(s) for subject field and/or organization concerned.
Reporting Requirements
Uniform Reporting System: information pamphlet, 10:44452 (R;US)

RESEARCH REACTORS
See also BSR-1 REACTOR
BSR-2 REACTOR
HFIR REACTOR
HFR REACTOR
IEAR-1 REACTOR
JMTR REACTOR
NRX REACTOR
SLOWPOKE TYPE REACTORS
Radioactive Effluents
Post accident environmental monitoring, 10:45125 (RA;IN)

RESERVOIR ROCK
Fracture Mechanics
In-Situ Stress Measurements at U.S. DOE's Multiwell Experiment Site, Mesaverde Group, Rifle, Colorado, 10:43723 (J;US)
Stress Analysis
In-Situ Stress Measurements at U.S. DOE's Multiwell Experiment Site, Mesaverde Group, Rifle, Colorado, 10:43723 (J;US)
RESERVOIRS (WATER)
See WATER RESERVOIRS
RESIDENCES
See HOUSES
RESIDENTIAL BUILDINGS
See also APARTMENT BUILDINGS HOUSES
Air Quality
Analysis of radon and radon progeny in residences: factors that affect their amounts and methods of reduction. Master's thesis, 10:45119 (R;US)
Energy Analysis
Energy Analysis Program. Annual report, FY 1984, 10:44546 (R;US)
Energy Audits
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 10:44528 (R;US)
Energy Analysis Program. Annual report, FY 1984, 10:44546 (R;US)
Residential conservation incentives: a review of loan impacts, 10:44529 (R;US)
Energy Conservation
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 10:44528 (R;US)
Energy Analysis Program. Annual report, FY 1984, 10:44546 (R;US)
Partitioning of gas or oil furnaces and water heaters to reduce drafts. Final report (Possible saving by way of less cold air infiltration if combustion air is drawn from outside), 10:44541 (R;US)
Research support for the Residential Conservation Service (RCS) program and other DOE conservation programs. Final report, 10:44534 (R;US)
Residential conservation incentives: a review of loan impacts, 10:44529 (R;US)
Energy Consumption
Estimation of reference or balance point temperatures, 10:44525 (R;US)
Energy Efficiency
Energy Analysis Program. Annual report, FY 1984, 10:44546 (R;US)
Thermal and environmental performance of the Aylmer Senior Citizens Residence. Final report, 10:44548 (R;CA)
Gas Burners
Pulsating burners - controlling mechanisms and performance. Annual report, December 1, 1983-November 30, 1984, 10:44921 (R;US)
Heating Systems
Energy saving heating systems in Danish homes, 10:44551 (TJ;GB)
Marketing
Research support for the Residential Conservation Service (RCS) program and other DOE conservation programs. Final report, 10:44534 (R;US)
Passive Solar Cooling Systems
Residential Passive Solar Energy Program, 10:44058 (R;US)
Passive Solar Heating Systems
Residential Passive Solar Energy Program, 10:44058 (R;US)
Retrofitting
Energy Analysis Program. Annual report, FY 1984, 10:44546 (R;US)
Roofs
Thermal performance measurements of insulated roof systems, 10:44530 (R;US)
Solar Heating Systems
Market potential for solar assisted ground coupled heat pumps, 10:44056 (RA;XE)
Space HVAC Systems
Clathrates and conjugating binaries: new materials for thermal storage, 10:44527 (R;US)
Integrated gas-fired space-heating/water-heating system with electric air conditioning. Annual report, January 1984-December 1984, 10:44550 (R;US)
Thermal and environmental performance of the Aylmer Senior Citizens Residence. Final report, 10:44548 (R;CA)
Thermal Insulation
Energy saving heating systems in Danish homes, 10:44551 (TJ;GB)
Ventilation Systems
Energy saving heating systems in Danish homes, 10:44551 (TJ;GB)
Water Heating
Integrated gas-fired space-heating/water-heating system with electric air conditioning. Annual report, January 1984-December 1984, 10:44550 (R;US)
Weatherization
1982 HHS/LIHEAP funds used for weatherization. An analysis of data from twenty states: Task A. Final report, 10:44539 (R;US)
Analytic methodologies for program evaluation for the Department of Energy Low Income Weatherization Assistance Program, task B. Final report, 10:44538 (R;US)
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 10:44528 (R;US)
Procurement practices in state and local agencies within the Department of Energy low income weatherization assistance program. Final report. Task C, 10:44536 (R;US)
Revised grantee and subgrantee weatherization monitoring instruments and pre-tests. Final report. Tasks D and E, 10:44540 (R;US)
Transferable methods identified during the monitoring of the DOE Chicago Operations Office Weatherization Assistance Program. Final report. Task F, 10:44537 (R;US)
Weatherization of residences: criteria for retrofit materials and products, 10:44547 (R;US)
RESIDUAL FUEL OIL
See RESIDUAL FUELS
RESIDUAL FUELS
Data Compilation
Petroleum Supply Monthly, June 1985, 10:43727 (R;US)
Sales
Petroleum Marketing Monthly, 10:43728 (R;US)
Staged Combustion
Development of a low NO/sub x/ burner for enhanced oil recovery, 10:43746 (R;US)
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESIDUUMS
See RESIDUAL FUELS
RESINS
Performance Testing
Chemical analyses of geothermal waters and Strategic Petroleum Reserve brines for metals of economic importance, 10:44137 (J;US)
RESISTIVITY SURVEYS
Technology Assessment
Seismic and resistivity methods of geophysical exploration. Final report, 10:45301 (R;US)
RESONANCE PARTICLES
See also EXOTIC RESONANCES MESON RESONANCES
Particle Production
[Studies of interactions between elementary particles and nuclei]. Progress report, 10:45420 (R;US)
RESONATORS
Efficiency
Coupling efficiency of waveguide laser resonators formed by flat mirrors: analysis and experiment, 10:44886 (J;US)
Manufacturing
Mechanical engineering, 10:44863 (RA;ZA)
Walls
Backward wave oscillators with rippled wall resonators: Analytic theory and numerical simulation, 10:45768 (J;US)

RESOURCE ASSESSMENT
Mathematical Models
Econometrics of exhaustible resource supply: a theory and an application, 10:44461 (R;US)
RESOURCE DEVELOPMENT
Constraints
Implications and management of resource constraints: a community model for international development, 10:44457 (R;US)
RESOURCE MANAGEMENT
Constraints
Implications and management of resource constraints: a community model for international development, 10:44457 (R;US)
RESOURCE RECOVERY FACILITIES
Cost
Sumner County solid-waste energy recovery facility. Volume 1. Feasibility studies, design, and construction. Final report, 10:43954 (R;US)
Economics
Potential for disposal of plant waste agglomerates in spreader stoker boilers, 10:43949 (RA;US)
Mass Balance
Solid waste processing for the recovery of secondary materials and energy, 10:43951 (RA;US)
Operation
Sumner County solid-waste energy recovery facility. Volume 1. Feasibility studies, design, and construction. Final report, 10:43954 (R;US)
RESOX PROCESS
Flowsheets
Continuous testing of the Resox process. Final report, 10:43658 (R;US)
Pilot Plants
Continuous testing of the Resox process. Final report, 10:43658 (R;US)
RESPIRABLE DUSTS
See DUSTS
RETENTION FUNCTIONS
Mathematical Models
Comparison of the U-233 dog data of Stevens et al. with uranium retention functions in ICRP Publication 30 and a 3-compartment mammillary model for uranium, 10:45217 (R;US)
RETORTING
See also IN-SITU RETORTING
Tracer Techniques
Report on 10-ton retort tracer testing: tests S76 through S79, 10:43763 (R;US)
REVERSE-FIELD PINCH
Transport Theory
CTR plasma engineering studies. Annual progress report, 1 December 1984-30 November 1985, 10:45841 (R;US)
RHENIUM FLUORIDES
Production
Manufacture of high purity metal fluorides, 10:44781 (R;US)
RHODE ISLAND
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
RHODIUM
Catalytic Effects
Colloidal catalyst coated semiconductors in surfactant vesicles. In situ generation of rhodium-coated cadmium sulfide particles in dioctadecyldimethylammonium halide surfactant vesicles and their utilization in photosensitized charge separation and hydrogen generation, 10:44828 (J;US)
Ion Microscopy
Oxide formation on Rh field emitter surfaces and its reduction by CO, 10:44642 (R;US)
Oxidation
Oxide formation on Rh field emitter surfaces and its reduction by CO, 10:44642 (R;US)
RHODIUM ALLOYS
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)
RHODIUM OXIDES
Reduction
Oxide formation on Rh field emitter surfaces and its reduction by CO, 10:44642 (R;US)
RIEMANN WAVES
See SHOCK WAVES
RINGS (STORAGE)
See STORAGE RINGS
RISER CRACKING
See COAL LIQUEFACTION
RISK ANALYSIS
See RISK ASSESSMENT
RISK ASSESSMENT
Benchmarks
Experiences from the Nordic Benchmark analyses, 10:44353 (RA;US)
Failure Mode Analysis
Development of success criteria and event trees for a BWR-6/Mark III plant, 10:44352 (RA;US)
Fault Tree Analysis
Large-scale reliability analysis by decomposition and integration, 10:44351 (RA;US)
Probability
Methodology for prioritization of systems and inspection programs, 10:44350 (RA;US)
Methods of uncertainty propagation used in the analysis of safety systems of Angra-1: a comparison, 10:44349 (RA;US)
Parametric Empirical Bayes methods for failure rate estimation, 10:44348 (RA;US)
Statistical Models
Multivariate statistical study for detection of failure trends and patterns in the analysis of events at nuclear power plants, 10:44347 (RA;US)
RIVERS
See also SAVANNAH RIVER
Water Pollution
Balancing experiment 1982 (BILEX '82) on the Unter Elbe River (Current simulation model MOHNA, transport model FLUSS), 10:45172 (R;DE;In German)
RIVETS
See FASTENERS
ROADS
Construction
Highway Construction Inspection Management using a microcomputer, 10:45900 (R;US)
ROBOTS
Operation
Use of commercial robotics in radioactive waste shipping and receiving, 10:43822 (R;US)
Performance Testing
Use of commercial robotics in radioactive waste shipping and receiving, 10:43822 (R;US)
Systems Analysis
Evaluation of robot-aided ultrasonic thickness measurement, 10:45040 (R;US)
Robotic design analysis based on teleoperated manipulator data collection, 10:44854 (R;US)
Thickness Gages
Evaluation of robot-aided ultrasonic thickness measurement, 10:45040 (R;US)
ROCK CAVERNS
Certification
High resolution temperature logging probe, 10:43745 (RA;US)
Leaching
High resolution temperature logging probe, 10:43745 (RA;US)
ROCK DRILLING
Performance Testing
Development of new mechanical and non-mechanical drilling processes for making blast holes in extremely hard or tough rock which is difficult to drill, 10:44924 (R;DE;In German)
ROCK SALT
See SALT DEPOSITS
ROCKS
See also IGNEOUS ROCKS

Fractures
Geochemical sensitivity analysis for performance assessment of HLW repositories: effects of speciation and matrix diffusion, 10:43892 (R;US)
Radionuclide Migration
Geochemical sensitivity analysis for performance assessment of HLW repositories: effects of speciation and matrix diffusion, 10:43892 (R;US)
ROCKY FLATS PLANT
Air Filters
Spring loaded hold-down for mounting HEPA filters at Rocky Flats, 10:43854 (RA;US)
Radioactive Waste Processing
Plutonium dissolution from Rocky Flats Plant incinerator ash, 10:43870 (R;US)
ROD BUNDLES
Criticality
Validation of three cross-section libraries used with the SCALE system for criticality safety analysis, 10:44306 (R;US)
Heat Transfer
Core spray heat transfer model for RELAP4/MOD7, 10:44342 (R;US)
Hydraulics
Core spray heat transfer model for RELAP4/MOD7, 10:44342 (R;US)
Performance Testing
Multirod Burst Test Program. Progress report, January-June 1981. Volume 1, 10:44410 (R;US)
RODENTS
Mapping
Mapping pocket gopher burrow systems with expanding polyurethane foam, 10:45149 (J;US)
RODS (CONTROL)
See CONTROL ELEMENTS
RODS (FUEL)
See FUEL RODS
ROOFS
Performance Testing
Thermal performance measurements of insulated roof systems, 10:44530 (R;US)
Stability
Postburn roof stability analysis for the TONO CRIP UCG burn, 10:43637 (R;US)
Thermal Insulation
Thermal performance measurements of insulated roof systems, 10:44530 (R;US)
ROTATING PLASMA
Charged-Particle Transport
Rotation and impurity transport in a tokamak plasma with directed neutral-beam injection, 10:45806 (J;AT)
Impurities
Rotation and impurity transport in a tokamak plasma with directed neutral-beam injection, 10:45806 (J;AT)
Neutral Atom Beam Injection
Rotation and impurity transport in a tokamak plasma with directed neutral-beam injection, 10:45806 (J;AT)
Viscosity
Viscous effects in a collisional tokamak plasma with strong rotation, 10:45788 (J;US)
ROTORS
Service Life
Dynamic analysis of wind turbine rotors for lifetime prediction, 10:44150 (R;DK)
RURAL AREAS
Economic Development
Alcohol fuels production, manpower, and education: where do two-year colleges fit, 10:43945 (R;US)
RUTHENIUM
Catalytic Effects
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 7, March 1-June 1, 1985, 10:43627 (R;US)
Solubility
Behavior and mechanism of sorption of uranylperoxocarbonato-complexes on anion exchanger systems, 10:44845 (R;DE;In German)
Volatility
Behavior of ruthenium, cesium and antimony during simulated HLLW vitrification, 10:43844 (RA;US)
RUTHENIUM 106
Removal
Volatile ruthenium trapping on silica gel and solid catalysts, 10:43855 (RA;US)
Uptake
Experimental study of the time dependence of uptake from soil of ^{137}Cs, ^{106}Ru, ^{144}Ce and ^{99}Tc into green vegetables, wheat and potatoes, 10:45142 (R;GB)
RUTHENIUM ISOTOPES
See also RUTHENIUM 106
Geochemistry
Radionuclide Migation Project 1984 progress report, 10:45180 (R;US)
RUTILE
Microstructure
Effect of shock pressure and temperature on the deformation microstructure of rutile, 10:44671 (R;US)
Pressure Effects
Effect of shock pressure and temperature on the deformation microstructure of rutile, 10:44671 (R;US)
Temperature Effects
Effect of shock pressure and temperature on the deformation microstructure of rutile, 10:44671 (R;US)

S

SACCHAROMYCES CEREVISIAE
Biological Radiation Effects
Yeast survival after gamma-irradiation. The effect of delayed colony appearance and determination of relative part of undamaged cells, 10:45234 (R;SU;In Russian)
Biological Repair
Yeast survival after gamma-irradiation. The effect of delayed colony appearance and determination of relative part of undamaged cells, 10:45234 (R;SU;In Russian)
SAFE LOW POWER CRITICAL EXPERIMENT
See SLOWPOKE TYPE REACTORS
SAFEGUARDS
Measuring Methods
Safeguards uses of confirmatory measurements, 10:43904 (R;US)
SAFETY
For general aspects of safety and protection of personnel.
See also REACTOR SAFETY
Human Factors
Human operator failures in petrochemical facilities. An historical investigation and a tentative simulation model, 10:43725 (RA;US)
SAFETY ENGINEERING
System Failure Analysis
Novel random-pulser concept for empirical reliability studies of complex systems, 10:45050 (R;DE)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SALINE ZONE
See OIL SHALES
SALINITY GRADIENT POWER PLANTS
Feasibility Studies
Southwest region solar pond study for three sites: Tularosa Basin, Malaga Bend, and Canadian River, 10:44019 (R;US)
SALMON
Acoustic Monitoring
Hydroacoustic monitoring of downstream migrant salmon and steelhead at Wells Dam in spring 1984. Annual report, 1984, 10:45155 (R;US)
Aquaculture
Development of rations for the enhanced survival of salmon. Annual report, 1984, 10:43968 (R;US)

Snake River Fall Chinook Salmon Broodstock Program, 1983. Annual progress report, 10:43961 (R;US)
Biological Stress
Development of an effective transport media for juvenile spring chinook salmon to mitigate stress and improve smolt survival during Columbia River fish hauling operations. Final report, 1985, 10:45156 (R;US)
Effects of handling and crowding on the stress response and viability of chinook salmon parr and smolts. Completion report, 1984, 10:45160 (R;US)
Fisheries
Annual review of BPA-funded projects in natural and artificial propagation of salmonids, 10:45188 (R;US)
Compendium of low-cost Pacific salmon and steelhead trout production facilities and practices in the Pacific Northwest, 10:43962 (R;US)
Infectious Diseases
Epidemiology and control of infectious diseases of salmonids in the Columbia River Basin. Annual report, FY 1983, 10:45264 (R;US)
Labelling
Study to determine the biological feasibility of a new fish tagging system. Annual report, 1983, 10:45154 (R;US)
Learning
Imprinting salmon and steelhead trout for homing. Annual report, 1983, 10:43959 (R;US)
Migration
Effects of flow on the migratory behavior and survival of juvenile fall and summer chinook salmon in John Day Reservoir. Annual report, FY 1983, 10:45152 (R;US)
Hydroacoustic monitoring of downstream migrant salmon and steelhead at Wells Dam in spring 1984. Annual report, 1984, 10:45155 (R;US)
Monitoring
Smolt passage behavior and flow-net relationships in the forebay of John Day Dam. Annual report, 1983, 10:45153 (R;US)
Study to determine the biological feasibility of a new fish tagging system. Annual report, 1983, 10:45154 (R;US)
Population Dynamics
Annual review of BPA-funded projects in natural and artificial propagation of salmonids, 10:45188 (R;US)
Predator-Prey Interactions
Feeding activity, rate of consumption, daily ration and prey selection of major predators in the John Day pool. Annual report, 1983, 10:45157 (R;US)
Reproduction
Fish passage improvements at Three Mile Falls Diversion Dam, Umatilla River, Oregon. Final completion report, 10:45190 (R;US)
Sampling
Effects of flow on the migratory behavior and survival of juvenile fall and summer chinook salmon in John Day Reservoir. Annual report, FY 1983, 10:45152 (R;US)
Smolt passage behavior and flow-net relationships in the forebay of John Day Dam. Annual report, 1983, 10:45153 (R;US)
Transport
Development of an effective transport media for juvenile spring chinook salmon to mitigate stress and improve smolt survival during Columbia River fish hauling operations. Final report, 1985, 10:45156 (R;US)
Effects of handling and crowding on the stress response and viability of chinook salmon parr and smolts. Completion report, 1984, 10:45160 (R;US)

SALT DEPOSITS
Cutting Tools
Rock-salt mine saw, 10:43875 (R;US)
Deformation
Marker Bed 139: a study of drillcore from a systematic array (Salado Formation), 10:45296 (R;US)
Drill Cores
Marker Bed 139: a study of drillcore from a systematic array (Salado Formation), 10:45296 (R;US)
Radioactive Waste Disposal
Salt Repository Project: FY 85 technical project plan, 10:43857 (R;US)
Radionuclide Migration
Contact zones and hydrothermal systems as analogues to repository conditions, 10:43890 (R;US)
Temperature Effects
Pretest reference calculation for the Heated Axisymmetric Pillar (WIPP Room H in situ experiment), 10:43879 (R;US)

SALTON SEA GEOTHERMAL FIELD
Geothermal Wells
Research opportunity, Salton Sea Scientific Drilling Project, 10:44125 (RA;US)

SAMARIUM 152 TARGET
Neutron Reactions
Problem of low energy neutron inelastic scattering on the ^{152}Sm nucleus, 10:45655 (R;SU;In Russian)

SAMARIUM 154 TARGET
Deep Inelastic Heavy Ion Reactions
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)

SAMARIUM BORIDES
Physical Radiation Effects
Radiation damage in SmS, SmSsub(1-x)Psub(x) and SmB_6, 10:44698 (R;FR)

SAMARIUM PHOSPHATES
Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
Raman Spectroscopy
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
X-Ray Diffraction
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

SAMARIUM PHOSPHIDES
Physical Radiation Effects
Radiation damage in SmS, SmSsub(1-x)Psub(x) and SmB_6, 10:44698 (R;FR)

SAMARIUM SULFIDES
Physical Radiation Effects
Radiation damage in SmS, SmSsub(1-x)Psub(x) and SmB_6, 10:44698 (R;FR)

SAMPLE CHANGERS
Specifications
Automatic sample changer for gamma spectrometry, 10:45021 (R;GB)

SAMPLERS
Operation
Downhole fluid sampler for geopressured gas wells, 10:43748 (RA;US)
Performance
Downhole fluid sampler for geopressured gas wells, 10:43748 (RA;US)

SAN ONOFRE-1 REACTOR
San Clemente, California, USA
Electrical Equipment
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the San Onofre Nuclear Power Station, Unit 1, 10:44430 (R;US)
Reactor Control Systems
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the San Onofre Nuclear Power Station, Unit 1, 10:44430 (R;US)
Reactor Instrumentation
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the San Onofre Nuclear Power Station, Unit 1, 10:44430 (R;US)
Reactor Protection Systems
Technical evaluation of the electrical, instrumentation, and control design aspects of the low temperature overpressure protection system for the San Onofre Nuclear Power Station, Unit 1, 10:44430 (R;US)

SAN ONOFRE-2 REACTOR
San Clemente, California, USA

Water Pollution
Concentration and speciation of copper in waters collected near the San Onofre and Diablo Canyon Nuclear Power Stations, 10:44318 (R;US)

SAN ONOFRE-3 REACTOR
San Clemente, California, USA
Water Pollution
Concentration and speciation of copper in waters collected near the San Onofre and Diablo Canyon Nuclear Power Stations, 10:44318 (R;US)

SANDIA LABORATORIES
Engineering
Current CIM activities in the materials process engineering and fabrication directorate 7400, 10:44866 (R;US)
Information Systems
SABIRS: user reference and system documentation, 10:45929 (R;US)
Personnel
Status of personnel identity verifiers, 10:43910 (R;US)

SANITARY LANDFILLS
Environmental Effects
Groundwater data analyses at utility waste disposal sites. Final report, 10:45091 (R;US)

SATELLITES
Arms control and crisis-management potential of the proposed International Satellite Monitoring Agency (ISMA), 10:44474 (R;CA)

SATURN PLANET
Planetary Magnetospheres
Proper solar wind power estimation and planetary radiometric efficiencies; and reply, 10:45338 (J;GB)

SAVANNAH RIVER
Aufwuchs
Savannah River aquatic ecology program. Annual report, September 1982-August 1983. Volume II, 10:45192 (R;US)
Fishes
Savannah River Aquatic Ecology Program. Volume I. Adult fish. Annual report, November 1983-August 1984, 10:45183 (R;US)
Invertebrates
Savannah River aquatic ecology program. Annual report, September 1982-August 1983. Volume II, 10:45192 (R;US)
Water Quality
Savannah River aquatic ecology program. Annual report, September 1982-August 1983. Volume II, 10:45192 (R;US)

SAVANNAH RIVER PLANT
Environmental Effects
Savannah River aquatic ecology program. Annual report, September 1982-August 1983. Volume II, 10:45192 (R;US)
Nuclear Materials Management
Experience with confirmatory measurements at the Savannah River Plant, 10:43901 (R;US)
Quality Assurance
Savannah River Laboratory quality assurance manual. Revision 2, 10:45902 (R;US)
Streams
Lower food chain community study: thermal effects and post-thermal recovery in the streams and swamps of the Savannah River Plant, November 1983-May 1984, 10:45182 (R;US)
Thermal Effluents
Remote sensing analysis of thermal plumes at the Savannah River Plant, 10:45184 (RA;US)

SCANDIUM HYDRIDES
Spin-Lattice Relaxation
Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of scandium, yttrium, lanthanum and lutetium, 10:44680 (J;CH)

SCANDIUM PHOSPHATES
Crystal Field
Observation by EPR of trivalent hafnium in $LuPO_4$, YPO_4, and $ScPO_4$, 10:44725 (J;US)

SCATTERING AMPLITUDES
Limiting Values
Quasi-classical limit of scattering amplitude - L^2-approach for short range potentials, 10:45568 (R;AT)

SCHNELLER NATRIUMGEKUEHLTER REAKTOR
See SNR REACTOR

SCHOOL BUILDINGS
Solar Heating Systems
Solar assisted heat pump system and in-ground energy storage in a school building, 10:44053 (RA;XE)

SCHROEDINGER EQUATION
Asymptotic Solutions
Quasi-classical limit of scattering amplitude - L^2-approach for short range potentials, 10:45568 (R;AT)

SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS

SCINTILLATION COUNTERS
See also LIQUID SCINTILLATION DETECTORS
Calibration
Problems and precision of the alpha scintillation radon counting system, 10:45008 (RA;US)
Cylindrical Configuration
Absolute and intrinsic response probabilities of scintillators presenting straight truncated cylindrical geometries to photons imitted by sources of the same shape, 10:45012 (R;FR;In French)
Response Functions
Absolute and intrinsic response probabilities of scintillators presenting straight truncated cylindrical geometries to photons imitted by sources of the same shape, 10:45012 (R;FR;In French)

SEA BED
Radioactive Waste Disposal
Method for the evaluation of radiologic consequence of the dumping of low- and medium-level radioactive wastes on the deep sea bed, 10:43895 (R;FR;In French)

SEA DISPOSAL
See MARINE DISPOSAL

SEALING MATERIALS
Irradiation Procedures
Carbon 84, 10:44713 (R;DE)
Sliding Friction
Carbon materials for sliding ring seals, 10:44714 (RA;DE)

SEAS
Radioactivity
Radioactivity in the ocean: laws and biological effects, 10:45175 (R;US)
Radionuclide Migration
Significance of the distribution of bomb-produced radiocarbon in the ocean, 10:45167 (R;US)
Temperature Distribution
Development of a simple oceanic mixed-layer and sea-ice model for use with an atmospheric GCM. Volume 1, 10:45165 (R;US)
Performance of an upper-ocean model coupled to an atmospheric GCM: preliminary results. Vol. 2, 10:45166 (R;US)

SEASONAL THERMAL ENERGY STORAGE
First year operation with a seasonal storage of 80,000 m^3 clay, 10:44051 (RA;XE)
Feasibility Studies
Sigtuna Project and application studies, 10:44052 (RA;XE)
Solar collectors in combination with aquifer and heat pump, 10:44047 (RA;XE)
Study on long-term underground heat storage with vertical storage coil, 10:44055 (RA;XE)
Rock Beds
Evaluation of solar heating systems with seasonal storage in New England. Systems using duct storage in rock and heat pump, 10:44032 (R;US)

Thermal Efficiency
Simplified model for the technic-economic evaluation of a solar system coupled with seasonal energy storage and a heat pump, 10:44049 (RA;XE)

SEBACEOUS GLANDS
See SKIN

SECURITY SEALS
Ultrasonic Testing
Design and performance evaluation of the ultrasonic random coil identity-integrity element for underwater safeguards seals, 10:43900 (R;CA)

SEDIMENTS
Acoustic Monitoring
Study of sound attenuation in sediments. Final technical report, 10:45307 (R;US)
Activation Analysis
Elemental analysis of sediments and organisms from the Cape Verde abyssal plain (CV 1 and CV 2 sites), 10:44738 (R;FR;In French)
Wave Propagation
Study of sound attenuation in sediments. Final technical report, 10:45307 (R;US)

SEISMIC SOURCES
Testing
Downhole periodic seismic sources, 10:44123 (RA;US)

SEISMIC SURVEYS
Borehole microseismic measurements for CSDP, 10:44122 (RA;US)
Borehole seismic experiments at sea, 10:43711 (RA;US)
Deep seismic sounding with nuclear explosives in the Soviet Union, 10:45306 (J;US)
Fracture zone identification using vertical seismic profiling methods, 10:43721 (RA;US)
Seismogenic crustal stresses as inferred from in situ stress measurements in a stratified crust, 10:45292 (RA;US)
Technology Assessment
Seismic and resistivity methods of geophysical exploration. Final report, 10:45301 (R;US)

SEISMIC WAVES
Attenuation
Quality factor in earth crust by analysis and modelling of Lg waves, 10:45298 (R;FR;In French)

SELENIDES
See also CADMIUM SELENIDES
COPPER SELENIDES
CURIUM SELENIDES
INDIUM SELENIDES
LEAD SELENIDES
TIN SELENIDES
Crystal Structure
Physical properties of transition metal chalcogenides, 10:44708 (RA;AT;In German)
Electric Conductivity
Physical properties of transition metal chalcogenides, 10:44708 (RA;AT;In German)
Thermoelectric Properties
Physical properties of transition metal chalcogenides, 10:44708 (RA;AT;In German)

SELENIUM
Chemical Reaction Kinetics
Partitioning and chemical speciation of volatile trace elements during inert gas oil shale retorting, 10:43764 (R;US)
Deposition
Deposition of selenium coatings on beryllium foils. Revision 1, 10:44646 (R;US)
Partition
Partitioning and chemical speciation of volatile trace elements during inert gas oil shale retorting, 10:43764 (R;US)
X Radiation
Deposition of selenium coatings on beryllium foils. Revision 1, 10:44646 (R;US)

SELENIUM 77
NMR Spectra
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH3)/sub n/CR'(COOC2H5)2, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)

SELENIUM 82
Double Beta Decay
Recent progress in laboratory $\beta\beta$-decay experiments and their interpretation, 10:45627 (R;US)

SELENIUM ADDITIONS
Metallurgical Effects
Armor - preliminary study of the effect of several alloying elements and addition agents upon the metallurgical properties of manganese-molybdenum steel used in armor, 10:44579 (R;US)

SELENIUM COMPOUNDS
See also SELENIDES
Absorption Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH3)/sub n/CR'(COOC2H5)2, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Chemical Preparation
Synthesis and antitumor activity of 2-β-D-ribofuranosylselenazole-4-carboxamide and related derivatives, 10:44792 (J;US)
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH3)/sub n/CR'(COOC2H5)2, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Magnetic Susceptibility
Magnetic susceptibility of curium pnictides, 10:44848 (J;NL)
Mass Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH3)/sub n/CR'(COOC2H5)2, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)

SELF-POWERED GAMMA DETECTORS
Bibliographies
Self-powered flux detectors. A bibliography with summaries, 10:45007 (R;CA)
Specifications
Self-powered flux detectors. A bibliography with summaries, 10:45007 (R;CA)

SELF-POWERED NEUTRON DETECTORS
Bibliographies
Self-powered flux detectors. A bibliography with summaries, 10:45007 (R;CA)
Failures
Dynamic response degradation of platinum self-powered detectors with low insulation resistance, 10:44336 (R;CA)
Performance Testing
Dynamic response degradation of platinum self-powered detectors with low insulation resistance, 10:44336 (R;CA)
Specifications
Self-powered flux detectors. A bibliography with summaries, 10:45007 (R;CA)

SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS

SEMICONDUCTOR DETECTORS
Calibration
Absolute calibration of the solid state detectors in the narrow band neutrino beam at CERN, 10:45023 (R;NL)
Uses
Contribution to time resolved X-ray fluence and differential spectra measurement method improvement in 5-200 KeV range. Application to pulsed emission sources, 10:45043 (R;FR;In French)

SEMICONDUCTOR DEVICES
Electrical Properties
High temperature solid-state devices, 10:45046 (RA;US)

SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Scanning Electron Microscopy
Structural and electrical characterization of polycrystalline semiconductor materials, 10:44014 (R;US)

SENSIBLE HEAT STORAGE
Heat Losses
Heat losses from a ground storage, a study with subroutines from SUNSYST, 10:44043 (RA;XE)
SENSITIVITY ANALYSIS
Review of the theory of sensitivity and uncertainty analysis, 10:45576 (RA;JP;In Japanese)
SEPTUM MAGNETS
Ion Beam Injection
Light-ion injector, 10:44983 (RA;ZA)
Magnet Coils
Light-ion injector, 10:44983 (RA;ZA)
Manufacturing
Mechanical engineering, 10:44863 (RA;ZA)
SEQUOYAH NUCLEAR POWER PLANT UNIT-1
See SEQUOYAH-1 REACTOR
SEQUOYAH NUCLEAR POWER PLANT UNIT-2
See SEQUOYAH-2 REACTOR
SEQUOYAH-1 REACTOR
Daisy, Tennessee, USA
Fuel Management
Improved fuel management strategies for TVA's nuclear reactors, 10:44188 (RA;US)
Seals
Sequoyah equipment hatch seal leakage. Final report, February 1985, 10:44238 (R;US)
SEQUOYAH-2 REACTOR
Daisy, Tennessee, USA
Fuel Management
Improved fuel management strategies for TVA's nuclear reactors, 10:44188 (RA;US)
Seals
Sequoyah equipment hatch seal leakage. Final report, February 1985, 10:44238 (R;US)
SEWAGE SLUDGE
Combustion
Fuel-efficient incineration for disposal of sewage sludge, 10:44570 (R;US)
Second review of standards of performance for sewage sludge incinerators, 10:45103 (R;US)
Radiosterilization
Irradiator design with large-volume source cylinders, 10:43918 (R;US)
SEYFERT GALAXIES
Accretion Disks
Broad line regions in Seyfert-1 galaxies. High resolution spectroscopy and multicomponent kinematical models, 10:45328 (R;NL)
Emission Spectra
Broad line regions in Seyfert-1 galaxies. High resolution spectroscopy and multicomponent kinematical models, 10:45328 (R;NL)
SHAFT EXCAVATIONS
Mining Engineering
Structural analysis of the NNWSI Exploratory Shaft, 10:43874 (R;US)
SHALE OIL
Biological Effects
Toxicology of large-scale refining of shale oil, 10:43767 (BA;US)
Burners
Guidebook for the use of synfuels in electric utility combustion systems. Volume 3. Liquid fuels derived from shale and tar sands. Final report, 10:43766 (R;US)
Combustion
Guidebook for the use of synfuels in electric utility combustion systems. Volume 3. Liquid fuels derived from shale and tar sands. Final report, 10:43766 (R;US)
Environmental Exposure Pathway
Toxicology of large-scale refining of shale oil, 10:43767 (BA;US)
Health Hazards
Toxicology of large-scale refining of shale oil, 10:43767 (BA;US)
Refining
Toxicology of large-scale refining of shale oil, 10:43767 (BA;US)
Risk Assessment
Toxicology of large-scale refining of shale oil, 10:43767 (BA;US)
SHATTERING
See FRAGMENTATION
SHEATHS (FUEL)
See FUEL CANS
SHIELDS
Design
Effective penetration shield design for ICF reactors, 10:45892 (BA;JP)
SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR
SHIPPINGPORT REACTOR
Fuel Cans
Corrosion and hydriding of Zircaloy fuel rod cladding in 633K water and reactor environments, 10:44189 (RA;US)
SHIPS
Contamination
Radioactive contamination of ventilation supply system, USS Crittenden, from Baker Explosion, Operation Crossroads. Final report, 10:45066 (R;US)
SHOCK WAVES
Wave Propagation
Analysis of dislocation kinetics across shocks, 10:45746 (R;US)
Stress-wave calculations of two containment experiments, 10:45058 (R;US)
SHORT CIRCUITS
See ELECTRICAL FAULTS
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Design
Early results from experiment UA1 at the CERN anti pp collider, 10:45036 (J;US)
Forward detector for the DO area at Fermilab, 10:45035 (J;US)
Saturated avalanche calorimeter, 10:45034 (J;US)
Performance
Saturated avalanche calorimeter, 10:45034 (J;US)
Resolution
Forward detector for the DO area at Fermilab, 10:45035 (J;US)
SHRIMP
Activation Analysis
Elemental analysis of sediments and organisms from the Cape Verde abyssal plain (CV 1 and CV 2 sites), 10:44738 (R;FR;In French)
Ecology
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (South Atlantic). White shrimp, 10:45161 (R;US)
SHUTTERS
Efficiency
Shuttering efficiencies of nanosecond-gated photoemissive shutter tubes, 10:45044 (R;US)
Energy Conservation
Temporary thermal insulation in the passive solar utilisation. June 24, 1983, 10:44543 (R;XE;In German)
Thermal Insulation
Insulated shutters, 10:44542 (R;DK)
Temporary thermal insulation in the passive solar utilisation. June 24, 1983, 10:44543 (R;XE;In German)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGMA MINUS
Rest Mass
K^- and Σ^- atom studies with high-Z targets, 10:45357 (RA;DE)
SIGMA-1385 RESONANCES
Hadronic Particle Decay
Low energy K^-p interactions, 10:45441 (RA;DE)
SIGMA-MINUS ATOMS
See HADRONIC ATOMS

SIGNALS
Amplification
Efficient optical analog signal amplification by backward Raman scattering, 10:44857 (R;US)
SILANES
Masking
Photochemically volatilized polysilanes: a new class of self-developing deep uv resists, 10:44783 (R;US)
Photochemistry
Photochemically volatilized polysilanes: a new class of self-developing deep uv resists, 10:44783 (R;US)
SILICA
Catalytic Effects
Kinetic study of partial oxidation of methane with nitrous oxide on a molybdena-silica catalyst, 10:44810 (J;US)
Fluorescence
Fluorescence emission by molecular impurities in irradiated and non-irradiated silica, 10:44701 (R;FR)
Microstructure
Nickel oxide morphology in nickel-silica catalysts, 10:44575 (R;US)
Optical Properties
Optical flatness standard, 10:44730 (J;US)
Physical Radiation Effects
Fluorescence emission by molecular impurities in irradiated and non-irradiated silica, 10:44701 (R;FR)
Molecular dynamic study of defects created by irradiation in vitreous silica, 10:44702 (R;FR;In French)
Surface Area
Reaction calorimetry for coal chemistry and catalysis. Final report, August 1, 1982-July 30, 1985 (Heats of immersion), 10:43652 (R;US)
Thermodynamic Properties
Reaction calorimetry for coal chemistry and catalysis. Final report, August 1, 1982-July 30, 1985 (Heats of immersion), 10:43652 (R;US)
Transmission
Variation of transmittance spectra of porous antireflection coatings with index profile, 10:44721 (R;US)
SILICA GEL
Thermodynamic Properties
Reaction calorimetry for coal chemistry and catalysis. Final report, August 1, 1982-July 30, 1985 (Heats of immersion), 10:43652 (R;US)
SILICON
Atom Transport
UV laser incorporation of dopants into silicon: Comparison of two processes, 10:44724 (J;US)
Crystal Doping
Impurities in silicon by pulse laser induced diffusion: a new method of superficial doping. Application to the realisation of photopiles, 10:43994 (R;FR;In French)
UV laser incorporation of dopants into silicon: Comparison of two processes, 10:44724 (J;US)
Electronic Structure
Theoretical study of neutron scattering cross sections in semiconductors, 10:45727 (RA;US)
Ion Implantation
Ion damage calculations in crystalline silicon, 10:44704 (R;US)
Laser-Radiation Heating
Impurities in silicon by pulse laser induced diffusion: a new method of superficial doping. Application to the realisation of photopiles, 10:43994 (R;FR;In French)
Melting
UV laser incorporation of dopants into silicon: Comparison of two processes, 10:44724 (J;US)
Neutron Reactions
Measurement of double differential neutron emission cross sections at OKTAVIAN Facility of Osaka University, 10:45604 (RA;JP;In Japanese)
Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range, 10:45612 (RA;JP;In Japanese)
Neutron Transport
Theoretical study of neutron scattering cross sections in semiconductors, 10:45727 (RA;US)
Optical Properties
Research on amorphous silicon and related alloys at the University of Utah, 10:44009 (RA;US)
Photoconductivity
Light-induced excess conductivity and the role of argon in the deposition of doping-modulated amorphous silicon superlattices, 10:44723 (J;US)
Photoluminescence
Research on amorphous silicon and related alloys at the University of Utah, 10:44009 (RA;US)
Photon Collisions
UV laser incorporation of dopants into silicon: Comparison of two processes, 10:44724 (J;US)
Physical Radiation Effects
Effect of hydrostatic pressure on defect annealing in semiconductors (Gamma irradiated), 10:44718 (R;US)
Ion damage calculations in crystalline silicon, 10:44704 (R;US)
Pionic Atoms
Precision measurements of 3D-2P pionic X-rays in low-Z atoms, 10:45362 (RA;DE)
P-N Junctions
Light-induced excess conductivity and the role of argon in the deposition of doping-modulated amorphous silicon superlattices, 10:44723 (J;US)
Research Programs
Research on amorphous silicon and related alloys at the University of Utah, 10:44009 (RA;US)
Superlattices
Light-induced excess conductivity and the role of argon in the deposition of doping-modulated amorphous silicon superlattices, 10:44723 (J;US)
SILICON 28 TARGET
Neutron Reactions
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)
SILICON CARBIDES
Chemical Vapor Deposition
Preparation of ceramic fiber-ceramic matrix composites by a faster chemical vapor infiltration process, 10:44686 (R;US)
Composite Materials
Fiber-reinforced ceramic composites made by chemical vapor infiltration, 10:44687 (R;US)
Erosion
Erosion rate of reaction-bonded SiC containing various amounts of free silicon, 10:44556 (J;NL)
Flexural Strength
Preparation of ceramic fiber-ceramic matrix composites by a faster chemical vapor infiltration process, 10:44686 (R;US)
Ion Implantation
Amorphization of ceramics by ion beams (Zr+, Cr^+, N^+, and Nb^+ ion implantation), 10:44677 (J;CH)
Analytical electron microscopy of surface modified ceramics, 10:44664 (R;US)
Reactivity of ion-implanted SiC (Chromium ions), 10:44675 (J;CH)
Physical Radiation Effects
Amorphization of ceramics by ion beams (Zr+, Cr^+, N^+, and Nb^+ ion implantation), 10:44677 (J;CH)
Surface Coating
Low-Z C+SiC alloy coating material for plasma interface applications, 10:45887 (J;NL)
SILICON COMPOUNDS
See also SILANES, SILOXANES and SILICONES.
See also SILANES
SILICON CARBIDES
SILICON NITRIDES
SILICON OXIDES
Chemical Reactions
Silicon compound formation in liquid sodium, 10:44259 (R;US)
Deposition
Silicon compound formation in liquid sodium, 10:44259 (R;US)
SILICON HYDRIDES
See SILANES
SILICON NITRIDES
Chemical Vapor Deposition
Preparation of ceramic fiber-ceramic matrix composites by a faster chemical vapor infiltration process, 10:44686 (R;US)

SILICON OXIDES
See also SILICA
Shock Waves
Condensed matter at high shock pressures, 10:45401 (R;US)
SILICON SOLAR CELLS
Coatings
Study of liquid silicium coating by a molten salt. Application to photovoltaic silicium ingot fabrication, 10:44002 (R;FR;In French)
Crystal Doping
Impurities in silicon by pulse laser induced diffusion: a new method of superficial doping. Application to the realisation of photopiles, 10:43994 (R;FR;In French)
Fabrication
Application of laser annealing for polycrystalline silicon solar cell processing, 10:43993 (R;FR;In French)
Meetings
Low-Cost Solar Array Project. Ninth project integration meeting handout, April 12-13, 1978, 10:44003 (R;US)
Melting
Study of liquid silicium coating by a molten salt. Application to photovoltaic silicium ingot fabrication, 10:44002 (R;FR;In French)
Recombination
Fundamental study of recombination in solar cells with highly doped substrates, 10:43999 (R;XE)
Research Programs
Low-Cost Solar Array Project. Ninth project integration meeting handout, April 12-13, 1978, 10:44003 (R;US)
SILVER
Alpha Reactions
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
Extraction
Chemical analyses of geothermal waters and Strategic Petroleum Reserve brines for metals of economic importance, 10:44137 (J;US)
Inner-Shell Ionization
Coupled state analysis of electron excitations in asymmetric collision systems, 10:45354 (R;DE)
Spallation
About the size of a source forming light fragments emitted in relativistic nuclear interactions, 10:45605 (R;SU;In Russian)
SILVER 110
Tissue Distribution
Distribution of ^{110}Ag-silver nitrate prophylaxis solutions following eyedrop application to the albino rabbit, 10:45254 (J;GB)
SILVER ALLOYS
Muon Probes
Study of crystalline and amorphous DyAg by muon spin relaxation, 10:44582 (R;FR)
SILVER CARBONATES
Chemical Reactions
Silver(I) ion complexation by carbonate and oxlate at 25°C, 10:44793 (J;CH)
SILVER COMPOUNDS
See also SILVER CARBONATES
SILVER NITRATES
Chemical Reactions
Silver(I) ion complexation by carbonate and oxlate at 25°C, 10:44793 (J;CH)
Reduction
Lack of atomic silver stabilization by crown ether surfactants, 10:44788 (J;SA)
SILVER NITRATES
Tissue Distribution
Distribution of ^{110}Ag-silver nitrate prophylaxis solutions following eyedrop application to the albino rabbit, 10:45254 (J;GB)
SISTER CHROMATID EXCHANGES
Biological Variability
Variation in baseline sister chromatid exchange frequencies in humans, 10:45197 (R;US)
SITE SELECTION
Hazardous waste sites: descriptions of sites on current National Priorities List, October 1984, 10:45151 (R;US)
SKIN
See also EPIDERMIS
Bioassay
Light activation of genotoxic components in natural and synthetic crude oils, 10:43738 (BA;US)
Injuries
Biological effects summary report: pyrene, 10:45257 (R;US)
Mutagen Screening
Light activation of genotoxic components in natural and synthetic crude oils, 10:43738 (BA;US)
SLABS
Thicker than PLATES, primarily for use in shielding studies.
Heat Transfer
Lumped-parameter models for transient conduction in nuclear reactor components, 10:44380 (R;US)
SLAGS
Corrosive Effects
Behavior of refractory linings for slagging gasifiers, 10:43631 (R;US)
SLC
See STANFORD LINEAR COLLIDER
SLOWPOKE TYPE REACTORS
Computerized Simulation
Large-signal, dynamic simulation of the SLOWPOKE-3 nuclear heating reactor, 10:44272 (R;CA)
SLUGS (FUEL)
See FUEL RODS
SLURRIES (FUEL)
See FUEL SLURRIES
SMALL BUSINESSES
Resource guide for Small Minority-Owned Energy Businesses. Volume 1. The resource guide, 10:45895 (R;US)
Resource guide for small minority-owned energy businesses. Volume 2. Appendixes, 10:45896 (R;US)
SMOKES
See also TOBACCO SMOKES
Chemical Reaction Yield
Development of a low NO/sub x/ burner for enhanced oil recovery, 10:43746 (R;US)
SNR REACTOR
Kalkar, North Rhine Westfalia, Federal Republic of Germany
Loss of Flow
Simulation of the effects on the time to rupture of unirradiated fuel rod cladding tubes of specific losses of coolant flow in the SNR-300 (emergency cooling cases), 10:44361 (R;DE;In German)
Mechanical Structures
Influence of medium dose neutron irradiation ($<=10^{22}$ NCM^{-2}) on design properties for elastic analysis of X6CRNI1811 for permanent structures of SNR 300, 10:44268 (RA;XA)
Reactor Materials
Influence of medium dose neutron irradiation ($<=10^{22}$ NCM^{-2}) on design properties for elastic analysis of X6CRNI1811 for permanent structures of SNR 300, 10:44268 (RA;XA)
Low dose irradiation effects on DIN 1.4948 mechanical properties (Neutron irradiation), 10:44267 (RA;XA)
SNR-1 REACTOR
See SNR REACTOR
SNR-300 REACTOR
See SNR REACTOR
SODIUM
Atom-Atom Collisions
Study of interference effects in Na(3S,3P)-Ne, Ar scattering experiments at high angular resolution, 10:45385 (R;NL)
Calorimetry
Description of the equilibrium conditions of chemical reactions in various solvents. Microcalorimetric and radiochemical studies into the complexing of monovalent metal salts by macrocyclic polyethers, 10:44743 (R;DE;In German)
Corrosive Effects
Corrosion of materials in sodium in BOR-60 reactor core, 10:44264 (RA;XA)

Electron-Atom Collisions
Spin dependence in superelastic electron scattering from Na(3P), 10:45404 (J;US)
Ionic Atoms
Ionic 2P-1S X-ray from 23Na, 10:45360 (RA;DE)
Radiometric Analysis
Description of the equilibrium conditions of chemical reactions in various solvents. Microcalorimetric and radiochemical studies into the complexing of monovalent metal salts by macrocyclic polyethers, 10:44743 (R;DE;In German)

SODIUM ALLOYS
Impurities
Investigation into fields of oxygen thermodynamic activity in a sodium-potassium coolant by emf method, 10:44602 (R;SU;In Russian)
Oxygen Potential
Investigation into fields of oxygen thermodynamic activity in a sodium-potassium coolant by emf method, 10:44602 (R;SU;In Russian)
Purification
Investigation into fields of oxygen thermodynamic activity in a sodium-potassium coolant by emf method, 10:44602 (R;SU;In Russian)

SODIUM CHLORIDES
Charged-Particle Transport
Intense e-beam interaction with matter, 10:45723 (R;US)

SODIUM CITRATES
See SODIUM COMPOUNDS

SODIUM COMPOUNDS
See also SODIUM CHLORIDES
Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
Raman Spectroscopy
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
X-Ray Diffraction
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)

SODIUM COOLED REACTORS
See also BOR-60 REACTOR
SNR REACTOR
Boiling Detection
Prediction methods in parametric signal models for early failure detection, 10:44366 (R;DE;In German)

SODIUM IODIDE DETECTORS
See NAI DETECTORS

SODIUM IONS
Beam Production
Alumino-silicate ion sources for accelerator applications, 10:44978 (R;US)

SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS

SODIUM MINERALS
See MINERALS

SOIL CHEMISTRY
Computerized Simulation
Illustration of the present capabilities of the ECCES program system, 10:45138 (R;DK)

SOILS
Acidification
Acid deposition and the acidification of soils and waters, 10:45089 (R;US)
Decontamination
Technical papers presented at a DOE meeting on criteria for cleanup of transuranium elements in soil, 10:45143 (R;US)
Gas Analysis
Exploration of high energy geothermal sources in the region of Cezallier (Massif Central, France). Study of the gases in the soils, 10:44129 (R;FR;In French)
Gas Chromatography
Portable gas chromatograph for polychlorinated biphenyl (PCB) analysis. Final report, 10:45137 (R;US)
Heat Storage
Heat storage in the grounds, realization of a testing area, 10:44104 (R;FR;In French)
Study of heat storage in non-saturated soils: construction of a column for simulation tests of the behavior of a non saturated strata used as storage zone, 10:44101 (R;XE;In French)
Moisture
Work within the coordinated programme on studying the physical and isotopic behaviour of soil moisture in the zone of aeration. Final report for the period 1 April 1981-31 October 1984, 10:45133 (R;XA;In French)
PH Value
Illustration of the present capabilities of the ECCES program system, 10:45138 (R;DK)
Radionuclide Migration
Radon transport from uranium mill tailings via plant transpiration. Final report, 10:45144 (R;US)
Review of existing instrumentation and evaluation of possibilities for research and development of instrumentation to determine future levels of radon at a proposed building site, 10:45147 (R;CA)
Sampling
Portable gas chromatograph for polychlorinated biphenyl (PCB) analysis. Final report, 10:45137 (R;US)

SOLAR ABSORBERS
Spectrally Selective Surfaces
Properties of amorphous carbon thin films deposited by magnetron pulverization. Application to selective surface for in-vacuum absorbers, 10:44090 (R;FR;In French)

SOLAR ACTIVITY
See also SOLAR WIND
Variations
Solar cycle variation of ephemeral regions. Final report, 1 November 1983-1 November 1984, 10:45323 (R;US)

SOLAR AIR CONDITIONERS
See also SOLAR-ASSISTED HEAT PUMPS
Research Programs
Applied Science Division annual report, Solar Energy Program FY 1983, 10:44070 (R;US)

SOLAR AIR HEATERS
Design
Development of an air solar collector. Compared balances of air and water systems, 10:44081 (R;FR;In French)
Performance Testing
Development of an air solar collector. Compared balances of air and water systems, 10:44081 (R;FR;In French)

SOLAR BATTERIES
See SOLAR CELL ARRAYS

SOLAR CELL ARRAYS
Design
Development and fabrication of photovoltaic concentrator modules for a point-focus Fresnel lens array, 10:44008 (R;US)
Energy Storage Systems
Zinc/ferricyanide battery development. Phase IV. Final report, 9 May 1983-15 February 1985, 10:44449 (R;US)
Fabrication
Development and fabrication of photovoltaic concentrator modules for a point-focus Fresnel lens array, 10:44008 (R;US)
Installation
Installation of a modular building block photovoltaic concentrator array field, 10:44007 (R;US)
Manufacturing
Solar collector manufacturing activity, 1984, 10:44083 (R;US)
Market
Solar collector manufacturing activity, 1984, 10:44083 (R;US)
Meetings
Low-Cost Solar Array Project. Ninth project integration meeting handout, April 12-13, 1978, 10:44003 (R;US)
Performance Testing
Development and fabrication of photovoltaic concentrator modules for a point-focus Fresnel lens array, 10:44008 (R;US)
Research Programs
Low-Cost Solar Array Project. Ninth project integration meeting handout, April 12-13, 1978, 10:44003 (R;US)

SOLAR CELL RECEIVERS
See SOLAR RECEIVERS

SOLAR CELLS
See also CONCENTRATOR SOLAR CELLS
GALLIUM ARSENIDE SOLAR CELLS
SILICON SOLAR CELLS
Electric Contacts
MOD silver metallization for photovoltaics. Final technical report, December 1, 1983-May 31, 1985, 10:43997 (R;US)
Fabrication
Development of stable high efficiency polycrystalline thin-film solar cells based on $CuInSe_2$. Final report, 16 March 1983-15 March 1984, 10:44012 (R;US)
Materials
Spray pyrolysis processing and properties of thin film photovoltaic materials, 10:43996 (R;US)
Research Programs
Review of photovoltaic research in the US, 10:44015 (R;US)
Solid State Photovoltaic Research Branch annual report, FY 1984, 10:44011 (R;US)
SOLAR COLLECTORS
See also CONCENTRATING COLLECTORS
FLAT PLATE COLLECTORS
SOLAR AIR HEATERS
SOLAR PONDS
Coverings
Molecular and microstructural factors affecting mechanical properties of polymeric cover plate materials, 10:44093 (R;US)
Manufacturing
Solar collector manufacturing activity, 1984, 10:44083 (R;US)
Market
Solar collector manufacturing activity, 1984, 10:44083 (R;US)
Spectrally Selective Surfaces
Microstructural and mechanical property evaluation of solar collectors. Final report, 10:44082 (R;US)
Wind Loads
Wind loading on solar collectors, 10:44100 (R;US)
SOLAR CONCENTRATORS
Performance
Concentrating systems in photovoltaic conversion. Achievements and forecastings, 10:44087 (R;FR;In French)
SOLAR COOLING SYSTEMS
See also PASSIVE SOLAR COOLING SYSTEMS
SOLAR AIR CONDITIONERS
Flowmeters
Flow-rate calibration for solar heating and cooling system evaluation. Final report, 10:44076 (R;US)
Research Programs
Proposed methodology for active solar research and development project selection, 10:44071 (R;US)
Solar Collectors
Performance characteristics of open-flow liquid desiccant solar collector/regenerator for solar cooling applications. Part I: two dimensional analysis of heat and mass transfer for open flow over rough inclined surfaces, 10:44065 (R;US)
Solar Regenerators
Performance characteristics of open-flow liquid desiccant solar collector/regenerator for solar cooling applications. Part I: two dimensional analysis of heat and mass transfer for open flow over rough inclined surfaces, 10:44065 (R;US)
Working Fluids
Determination of properties of fluids for solar cooling applications. Final report, 10:44057 (R;US)
SOLAR CYCLE
Solar Activity
Solar cycle variation of ephemeral regions. Final report, 1 November 1983-1 November 1984, 10:45323 (R;US)
SOLAR DISTRICT HEATING
Systems Analysis
Large-scale solar heating technology: Ingelstad - a solar group heating plant without heat pumps, 10:44077 (R;SE)
SOLAR DOMESTIC WATER HEATING
See SOLAR WATER HEATING
SOLAR DRYERS
Control
Modelling and control of a solar dryer, 10:44068 (R;FR;In French)
Mathematical Models
Modelling and control of a solar dryer, 10:44068 (R;FR;In French)
SOLAR ENERGY
Bibliographies
ASSET: abstracts of selected solar energy technology. Volume 7, No. 1, 10:43973 (R;JP)
Reviews
ASSET: abstracts of selected solar energy technology. Volume 7, No. 1, 10:43973 (R;JP)
SOLAR ENERGY CONVERSION
Energy Transfer
Energy transfer in covalently linked and face to face bisporphyrins, 10:43980 (R;FR;In French and English)

SOLAR-ASSISTED HEAT PUMPS
Computer-Aided Design
Development and optimisation of cost effective thermal energy storage systems for solar space heating by means of a microprocessor controlled test facility, 10:44102 (R;XE)
Computerized Simulation
Solar space heating systems and domestic hot water, 10:44067 (R;XE)
Flowmeters
Flow-rate calibration for solar heating and cooling system evaluation. Final report, 10:44076 (R;US)
Heat Exchangers
Heat exchange in small solar heating systems, 10:44064 (R;DK;In Danish)
Performance
Modelling of thermal storage for solar heating systems. Final report. Vol. 2, 10:44066 (R;XE)
Thermal and environmental performance of the Aylmer Senior Citizens Residence. Final report, 10:44548 (R;CA)
Research Programs
Proposed methodology for active solar research and development project selection, 10:44071 (R;US)
Seasonal Thermal Energy Storage
Evaluation of solar heating systems with seasonal storage in New England. Systems using duct storage in rock and heat pump, 10:44032 (R;US)
Simplified model for the technic-economic evaluation of a solar system coupled with seasonal energy storage and a heat pump, 10:44049 (RA;XE)
Standards
Revisions included in HUD Intermediate Minimum Property Standards Supplement 4930.2, 1977 edition: solar heating and domestic hot-water systems, 10:44078 (R;US)
Thermal Energy Storage Equipment
Development and optimisation of cost effective thermal energy storage systems for solar space heating by means of a microprocessor controlled test facility, 10:44102 (R;XE)
SOLAR ONE POWER PLANT
See BARSTOW SOLAR PILOT PLANT
SOLAR PONDS
Computer Codes
User's manual for Massachusetts Institute of Technology Solar Thermal Pond Program (MITSOL), 10:44097 (R;US)
Construction
Solar heat pond system, 10:44080 (RA;US)
Economic Analysis
Southwest region solar pond study for three sites: Tularosa Basin, Malaga Bend, and Canadian River, 10:44019 (R;US)

Mathematical Models
Entrainment in diffusive thermohaline systems. Application to salt gradient solar ponds, 10:44098 (R;US)
Research Programs
Review of SERI solar pond work, 10:44099 (R;US)
Salinity Gradients
Entrainment in diffusive thermohaline systems. Application to salt gradient solar ponds, 10:44098 (R;US)
User's manual for Massachusetts Institute of Technology Solar Thermal Pond Program (MITSOL), 10:44097 (R;US)
Temperature Distribution
Entrainment in diffusive thermohaline systems. Application to salt gradient solar ponds, 10:44098 (R;US)
User's manual for Massachusetts Institute of Technology Solar Thermal Pond Program (MITSOL), 10:44097 (R;US)

SOLAR PROCESS HEAT
Economic Analysis
Solar-generated industrial process heat: proposal to the Ministry of Energy and Infrastructure. Volume 1. Summary of investment opportunity, 10:44073 (R;IL)
Technology Assessment
Solar-generated industrial process heat: proposal to the Ministry of Energy and Infrastructure. Volume 2. Summary of investment opportunity, 10:44074 (R;IL)

SOLAR RADIATION
Mathematical Models
Description, measurement and modelling of solar input adapted to the general study of solar energy conversion systems, 10:43977 (R;FR;In French)
Measuring Methods
Description, measurement and modelling of solar input adapted to the general study of solar energy conversion systems, 10:43977 (R;FR;In French)

SOLAR RECEIVERS
See also CAVITY RECEIVERS
CENTRAL RECEIVERS
Particles
Direct radiant heating of particle suspensions for the production of fuels and chemicals using concentrated sunlight, 10:44092 (R;US)
Solar radiant processing of gas-particle systems for producing useful fuels and chemicals, 10:44091 (R;US)
Suspensions
Direct radiant heating of particle suspensions for the production of fuels and chemicals using concentrated sunlight, 10:44092 (R;US)
Solar radiant processing of gas-particle systems for producing useful fuels and chemicals, 10:44091 (R;US)

SOLAR REGENERATORS
System or device for regenerating absorbent solutions by solar heating, used in absorption solar air conditioning.
Performance
Performance characteristics of open-flow liquid desiccant solar collector/regenerator for solar cooling applications. Part I: two dimensional analysis of heat and mass transfer for open flow over rough inclined surfaces, 10:44065 (R;US)

SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS

SOLAR SYSTEM
Chemical Composition
Interstellar origin atomic hydrogen in the solar system: modelling and application to analysis of Lyman alpha result (intensity and line profile) from Prognoz 5 and 6 satellites, 10:45326 (R;FR;In French)

SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS

SOLAR WATER HEATING
Use for solar domestic water heating; not for process hot water.
Standards
Revisions included in HUD Intermediate Minimum Property Standards Supplement 4930.2, 1977 edition: solar heating and domestic hot-water systems, 10:44078 (R;US)

SOLAR WIND
Interactions
Proper solar wind power estimation and planetary radiometric efficiencies; and reply, 10:45338 (J;GB)

SOLAR-ASSISTED HEAT PUMPS
Coefficient of Performance
Some measurement results on commercial heat pump systems with solar collectors and ground storage, 10:44040 (RA;XE)
Design
Development of solar assisted heat pumps for the heating and cooling of buildings. Volume I. Final technical report, February 1, 1978-June 30, 1980, 10:44059 (R;US)
Installation
Earth coil/heat pump research at Oklahoma State University, 10:44050 (RA;XE)
Market
Experiences with solar coupled storages with heat pumps for space heating in Austria, 10:44038 (RA;XE)
Market potential for solar assisted ground coupled heat pumps, 10:44056 (RA;XE)
Operation
Central solar heating plants with seasonal storage, 10:44039 (RA;XE)
Experiences with solar coupled storages with heat pumps for space heating in Austria, 10:44038 (RA;XE)
First year operation with a seasonal storage of 80,000 m^3 clay, 10:44051 (RA;XE)
Heating of a laboratory hall by means of a soil heat pump combined with unshielded solar collectors, 10:44041 (RA;XE)
Heliogeothermal doublet: application to 224 collective apartments, 10:44045 (RA;XE)
Loft solar collector with heat storage in the ground under a house, 10:44035 (RA;XE)
Performance of a hybrid solar heating system of the solar laboratory at the JRC-Ispra, 10:44048 (RA;XE)
Project Perstorp: a combined surface-soil and solar heating system for a group of detached houses, 10:44034 (RA;XE)
Sigtuna Project and application studies, 10:44052 (RA;XE)
Simplified model for the technic-economic evaluation of a solar system coupled with seasonal energy storage and a heat pump, 10:44049 (RA;XE)
Solar assisted heat pump system and in-ground energy storage in a school building, 10:44053 (RA;XE)
Solar House Obdach: experiences with a solar ground-coupled storage system, 10:44033 (RA;XE)
Some experimental results on coupled systems: air collectors, ground storage, heat pump, 10:44036 (RA;XE)
Storage of solar energy with horizontal pipes in the ground, 10:44037 (RA;XE)
Study of a heating system using a water-water heat pump, solar panels without covers and low temperature heat storage, 10:44046 (RA;XE)
Study on long-term underground heat storage with vertical storage coil, 10:44055 (RA;XE)
Three years experiences from a summer stored earth-heat-pump-system, 10:44054 (RA;XE)
Performance
Central solar heating plants with seasonal storage, 10:44039 (RA;XE)
Development of solar assisted heat pumps for the heating and cooling of buildings. Volume I. Final technical report, February 1, 1978-June 30, 1980, 10:44059 (R;US)
Heat losses from a ground storage, a study with subroutines from SUNSYST, 10:44043 (RA;XE)
Heating of a laboratory hall by means of a soil heat pump combined with unshielded solar collectors, 10:44041 (RA;XE)
Heliogeothermal doublet: application to 224 collective apartments, 10:44045 (RA;XE)
Loft solar collector with heat storage in the ground under a house, 10:44035 (RA;XE)
Performance of a hybrid solar heating system of the solar laboratory at the JRC-Ispra, 10:44048 (RA;XE)
Project Perstorp: a combined surface-soil and solar heating system for a group of detached houses, 10:44034 (RA;XE)
Selection of optimal ground coupled solar heat pump systems, 10:44042 (RA;XE)

Simplified model for the technic-economic evaluation of a solar system coupled with seasonal energy storage and a heat pump, 10:44049 (RA;XE)
Solar assisted heat pump system and in-ground energy storage in a school building, 10:44053 (RA;XE)
Solar collectors in combination with aquifer and heat pump, 10:44047 (RA;XE)
Solar House Obdach: experiences with a solar ground-coupled storage system, 10:44033 (RA;XE)
Some experimental results on coupled systems: air collectors, ground storage, heat pump, 10:44036 (RA;XE)
Storage of solar energy with horizontal pipes in the ground, 10:44037 (RA;XE)
Study of a heating system using a water-water heat pump, solar panels without covers and low temperature heat storage, 10:44046 (RA;XE)
Three years experiences from a summer stored earth-heat-pump-system, 10:44054 (RA;XE)

Research Programs
Development of solar assisted heat pumps for the heating and cooling of buildings. Volume II. Final technical report, February 1, 1978-June 30, 1980, 10:44060 (R;US)
Earth coil/heat pump research at Oklahoma State University, 10:44050 (RA;XE)
Experiences with solar coupled storages with heat pumps for space heating in Austria, 10:44038 (RA;XE)

Test Facilities
Experimental comparison of the performances of various energy roofs and unglazed absorbers at the outdoor test facility of the Swiss Federal Institute for Reactor Research (EIR), 10:44044 (RA;XE)

SOLID ELECTROLYTES

Chemical Properties
Photoeffects of semiconductor electrolyte interfaces. Final report, 1979-1984, 10:44821 (R;US)

Fabrication
Photoeffects of semiconductor electrolyte interfaces. Final report, 1979-1984, 10:44821 (R;US)

SOLID WASTES

TAILINGS
WOOD WASTES

Environmental Impacts
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)

Health Hazards
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)

Leachates
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)

Waste Disposal
Methodology for assessing solid waste disposal alternatives for future conversions to coal, 10:43657 (R;US)
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)

Waste Management
Groundwater data analyses at utility waste disposal sites. Final report, 10:45091 (R;US)
Summary of health and environmental research: solid waste management, 10:43679 (BA;US)

SOLIDS

Charged-Particle Transport
Intense e-beam interaction with matter, 10:45723 (R;US)

Dispersion Relations
High energy phonons: overview, 10:45731 (RA;US)

Neutron Transport
High energy phonons: overview, 10:45731 (RA;US)
Measurement of momentum distributions in solids using deep inelastic neutron scattering, 10:45729 (RA;US)
Momentum distributions, 10:45728 (RA;US)

Pneumatic Transport
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)
Report on solids transport workshop, 10:43688 (R;US)

Potentials
Measurement of momentum distributions in solids using deep inelastic neutron scattering, 10:45729 (RA;US)

Processing
Linking R and D to problems experienced in solids processing, 10:44917 (R;US)

Shock Waves
Analysis of dislocation kinetics across shocks, 10:45746 (R;US)

Thermodynamic Properties
Thermomechanical theory for a porous anisotropic elastic solid with inclusions, 10:44732 (J;DE)

SOLIDS FLOW

Friction
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)

Velocity
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)

Wall Effects
Particle-wall interaction and wall friction in gas-solid flows, 10:44895 (R;US)

SOLVATED ELECTRONS

Excited States
Theoretical studies of electron and proton transfer processes in fluids. Progress report, August 1984-August 1985, 10:44772 (R;US)

Ground States
Theoretical studies of electron and proton transfer processes in fluids. Progress report, August 1984-August 1985, 10:44772 (R;US)

SOMALIA

Geochemical Surveys
Surficial uranium deposits in Somalia, 10:43788 (RA;XA)

Uranium Reserves
Surficial uranium deposits in Somalia, 10:43788 (RA;XA)

SOMATIC MUTATIONS

Bioassay
Determination of somatic mutations in human erythrocytes by cytometry, 10:45250 (R;US)

SONIC LOGGING
Scientific applications of BHTV and sonic logging, 10:45303 (RA;US)

SOOT

Health Hazards
[Effects of sulfur dioxide and respirable particulates on pulmonary function in human subjects], 10:45268 (R;US)

SOUTH AFRICA

SPINOR FIELDS
[Topics in theoretical physics]. Progress report, 10:45551 (R;US)
SQUID DEVICES
Superconducting Quantum Interference Devices
Fabrication
Nuclear quadrupole resonance detected at 30 MHz with a dc superconducting quantum interference device, 10:44872 (J;US)
Noise
Nuclear quadrupole resonance detected at 30 MHz with a dc superconducting quantum interference device, 10:44872 (J;US)
Quality Factor
Nuclear quadrupole resonance detected at 30 MHz with a dc superconducting quantum interference device, 10:44872 (J;US)
Specifications
Recent developments in self-contained cryocoolers for SQUIDS and other low-power cryoelectronic devices. Final report, 10:44864 (R;US)
STACK DISPOSAL
Gas Analysis
Measurement of stack-gas concentrations in the infrared region of the spectrum, 10:45099 (R;FI)
Optimization
Fluid-modeling demonstration of good-engineering-practice stack height in complex terrain, 10:44176 (R;US)
Plumes
Measurements of the plume path of a heavy plume, 10:45076 (R;NL)
STAINLESS STEEL-304
Aging
Review of effects of long-term aging on the mechanical properties and microstructures of Types 304 and 316 stainless steel, 10:44253 (R;US)
Crack Propagation
Japanese R and D programme on the crack propagation properties for the FBR structural safety analysis, 10:44263 (RA;XA)
Creep
Analytical method on evaluation of creep-fatigue life with long-time strain hold, 10:44626 (RA;XA)
Evaporation
Correlation of experimental and theoretical results for vaporization by simulated disruption, 10:45888 (J;NL)
Fatigue
Analytical method on evaluation of creep-fatigue life with long-time strain hold, 10:44626 (RA;XA)
Low-cycle fatigue properties of SUS304 stainless steel in high-temperature sodium, 10:44623 (RA;XA)
Metallography
Metallurgical analysis of a 304L stainless steel canister from the Spent Fuel Test - Climax, 10:44643 (R;US)
Microstructure
Review of effects of long-term aging on the mechanical properties and microstructures of Types 304 and 316 stainless steel, 10:44253 (R;US)

Physical Radiation Effects
Effect of neutron irradiation on tensile properties of SUS304 stainless steel at elevated temperature, 10:44266 (RA;XA)
Ruptures
New approach for stress rupture data extrapolation, 10:44625 (RA;XA)
Stress Corrosion
Role of hydrogen embrittlement in intergranular stress corrosion cracking of sensitized Type 304 stainless steel, 10:44595 (R;US)
Stresses
New approach for stress rupture data extrapolation, 10:44625 (RA;XA)
STAINLESS STEEL-304L
Corrosion
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Leaching
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
STAINLESS STEEL-308
Microstructure
Fracture properties of a neutron-irradiated stainless steel submerged arc weld cladding overlay, 10:44186 (R;US)
Physical Radiation Effects
Fracture properties of a neutron-irradiated stainless steel submerged arc weld cladding overlay, 10:44186 (R;US)
STAINLESS STEEL-309
Microstructure
Fracture properties of a neutron-irradiated stainless steel submerged arc weld cladding overlay, 10:44186 (R;US)
Physical Radiation Effects
Fracture properties of a neutron-irradiated stainless steel submerged arc weld cladding overlay, 10:44186 (R;US)
STAINLESS STEEL-316
Aging
Review of effects of long-term aging on the mechanical properties and microstructures of Types 304 and 316 stainless steel, 10:44253 (R;US)
Creep
Creep/fatigue behaviour of Type 316 steel in sodium, 10:44621 (RA;XA)
Influence of flowing sodium on creep rupture properties of type 316 and 9Cr1Mo steels, 10:44617 (RA;XA)
Fatigue
Creep/fatigue behaviour of Type 316 steel in sodium, 10:44621 (RA;XA)
Fracture Properties
Fracture toughness of Type 316 steel and weld metal, 10:44624 (RA;XA)
Influence of flowing sodium on creep rupture properties of type 316 and 9Cr1Mo steels, 10:44617 (RA;XA)
UKAEA stress rupture results from tests performed in sodium, 10:44619 (RA;XA)
Microstructure
Review of effects of long-term aging on the mechanical properties and microstructures of Types 304 and 316 stainless steel, 10:44253 (R;US)
Physical Radiation Effects
Effect of boron on the development of helium induced creep embrittlement in type 316 stainless steel, 10:44629 (RA;XA)
Effects of low dose fast neutron irradiation on the fracture toughness of Type 316 stainless steel and weld metal, 10:44631 (RA;XA)
Elastic-plastic fracture toughness characteristics of irradiated AISI 316 H stainless steel (Neutron irradiation), 10:44632 (RA;XA)
Ruptures
Influence of flowing sodium on creep rupture properties of type 316 and 9Cr1Mo steels, 10:44617 (RA;XA)
Stress Corrosion
Nature of corrosion films in simulated LWR water. Final report, 10:44230 (R;US)
Phenomenological model for stress corrosion cracking of Types 316NG and 316 stainless steel, 10:44184 (R;US)
STAINLESS STEELS
See also STAINLESS STEEL-304
STAINLESS STEEL-304L
STAINLESS STEEL-308
STAINLESS STEEL-309
STAINLESS STEEL-316
STAINLESS STEEL-Z6CND17-12

STEEL-DIN-1-4948
STEEL-X6CRNI1811
Antimony Additions
Segregation to boundaries in an antimony-containing stainless steel, 10:44590 (R;US)
Electromotive Force
Finite element modeling of pulsed eddy current NDT phenomena, 10:44418 (R;US)
Ion Implantation
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Multi-Element Analysis
Spectrographic analysis of stainless steels, 10:44746 (R;BR;In Portuguese)
Nuclear Reaction Analysis
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Physical Radiation Effects
Effect of pulsed irradiation on microstructural evolution, 10:44597 (R;US)
Ion beam studies of hydrogen in metals, 10:44652 (J;CH)
Recombination
Hydrogen trapping, diffusion and recombination in austenitic stainless steels, 10:45886 (J;NL)
Segregation
Segregation to boundaries in an antimony-containing stainless steel, 10:44590 (R;US)
STAINLESS STEEL-Z6CND17-12
Physical Radiation Effects
Elastic-plastic fracture toughness characteristics of irradiated AISI 316 H stainless steel (Neutron irradiation), 10:44632 (RA;XA)
STANDARDS
Indexes
Nuclear standards master index, 10:44282 (R;US)
STANDING CROP
See BIOMASS
STANFORD LINEAR ACCELERATOR CENTER
Data Processing
Rx for hung users, 10:44991 (R;US)
IBM Computers
Rx for hung users, 10:44991 (R;US)
STANFORD LINEAR COLLIDER
Comparative Evaluations
Linear colliders - prospects 1985, 10:45004 (R;US)
Electric Fields
Increasing the energy of SLC by transient wake field, 10:44934 (R;US)
STATISTICS
Limited to the indexing of information on the mathematical discipline of statistics or its application in other scientific disciplines; for indexing numerical values of a statistical nature use STATISTICAL DATA.

REGRESSION ANALYSIS
Lectures
Lectures on probability and statistics. Revision, 10:45917 (R;US)
STEAM
Chemical Reactions
Behavior of the Zircaloy cladding tube in a mixed gas of hydrogen and steam, 10:44440 (TG;US)
Explosions
Experimental investigation of hydrodynamic fragmentation of gallium droplets in water flow, 10:44356 (R;DE;In German)
STEAM CONDENSERS
Optimization
Benefits of spirally enhanced tubes for steam condensers in minimum-weight cooling systems. Final report, 10:44887 (R;US)
STEAM COOLANT
See STEAM
STEAM GENERATION
See also COGENERATION

Management
Improved boiler control in food factories. Final report, 10:44567 (R;XE)

STEAM GENERATORS
Corrosion
AECL research programs in systems chemistry, 10:44242 (R;CA)
Eddy Current Testing
Eddy-current inspection for steam generator tubing program. Quarterly progress report, March 31, 1980, 10:44234 (R;US)
Eddy-current inspection for steam generator tubing program. Annual progress report, December 31, 1980, 10:44236 (R;US)
Evaluation of multiparameter eddy current technology for inspection of steam generator tubing, 10:44235 (R;US)
Functional Models
Real-time LMFBR steam generator analyzer, 10:44254 (R;US)
In-Service Inspection
Eddy-current inspection for Steam Generator Tubing Program. Quarterly progress report for period ending March 31, 1981. Volume 1, 10:44237 (R;US)
Eddy-current inspection for steam generator tubing program. Quarterly progress report, March 31, 1980, 10:44234 (R;US)
Eddy-current inspection for steam generator tubing program. Annual progress report, December 31, 1980, 10:44236 (R;US)
Inspection
Evaluation of multiparameter eddy current technology for inspection of steam generator tubing, 10:44235 (R;US)
Research Programs
Research program plan: steam generators, 10:44292 (R;US)
Stress Corrosion
Water Reactor Safety Research Division quarterly progress report, January 1-March 31, 1980, 10:44378 (R;US)
Tubes
Steam generator tube performance. Experience with water-cooled nuclear power reactors during 1981, 10:44181 (R;CA)
Water Hammer
Evaluation of condensation-induced water hammer in preheat steam generators, 10:44233 (R;US)

STEAM SUPERHEATERS
See SUPERHEATERS

STEAM TURBINES
Condensers
Chemical cleaning of a brass-tubed turbine condenser after five years of operation with ferrous sulphate dosing, 10:44167 (TJ;GB)
Turbine Blades
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)

STEEL-10CD9-10
Crack Propagation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)
Creep
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Embrittlement
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Fatigue
Comparison of low-cycle fatigue data of 2 1/4%CrMo steels, 10:44611 (RA;XA)
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Grain Boundaries
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Performance
1 x 2M steel performance in the BOR-60 steam generator, 10:44260 (RA;XA)
Pitting Corrosion
1 x 2M steel performance in the BOR-60 steam generator, 10:44265 (RA;XA)
Stress Relaxation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)

STEEL-15CD9-10
Crack Propagation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)
Creep
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Embrittlement
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Fatigue
Comparison of low-cycle fatigue data of 2 1/4%CrMo steels, 10:44611 (RA;XA)
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Grain Boundaries
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Performance
1 x 2M steel performance in the BOR-60 steam generator, 10:44260 (RA;XA)
Pitting Corrosion
1 x 2M steel performance in the BOR-60 steam generator, 10:44265 (RA;XA)
Stress Relaxation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)

STEEL-ASTM-A387
Crack Propagation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)
Creep
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Embrittlement
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Fatigue
Comparison of low-cycle fatigue data of 2 1/4%CrMo steels, 10:44611 (RA;XA)
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Grain Boundaries
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Performance
1 x 2M steel performance in the BOR-60 steam generator, 10:44260 (RA;XA)
Pitting Corrosion
1 x 2M steel performance in the BOR-60 steam generator, 10:44265 (RA;XA)
Stress Relaxation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)

STEEL-ASTM-A508
Crack Propagation
Flaw preparations for HSST program vessel fracture mechanics testing: mechanical-cyclic pumping and electron-beam weld-hydrogen-charge cracking schemes, 10:44375 (R;US)
Evaporation
Correlation of experimental and theoretical results for vaporization by simulated disruption, 10:45888 (J;NL)
Fatigue
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Fracture Mechanics
Pressure vessel fracture studies pertaining to the PWR thermal-shock issue: experiment TSE-7, 10:44414 (R;US)
Fracture Properties
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Physical Radiation Effects
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)

STEEL-ASTM-A516
Corrosion
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
Leaching
Glass/metal interactions, leaching, waste glass, canister material, 10:44774 (R;US)
STEEL-ASTM-A533-B
Crack Propagation
Flaw preparations for HSST program vessel fracture mechanics testing: mechanical-cyclic pumping and electron-beam weld-hydrogen-charge cracking schemes, 10:44375 (R;US)
Fatigue
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Fracture Properties
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
Physical Radiation Effects
Heavy-section steel technology program. Quarterly progress report, July-September 1979, 10:44212 (R;US)
STEEL-ASTM-A542
Crack Propagation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)
Creep
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Embrittlement
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Fatigue
Comparison of low-cycle fatigue data of 2 1/4%CrMo steels, 10:44611 (RA;XA)
Effects of sodium environment on the mechanical properties of Fe-2 1/4Cr-1Mo steel, 10:44616 (RA;XA)
Grain Boundaries
Effects of microstructure on the temper embrittlement susceptibility of a 2 1/4Cr1Mo forging, 10:44609 (RA;XA)
Performance
1 x 2M steel performance in the BOR-60 steam generator, 10:44260 (RA;XA)
Pitting Corrosion
1 x 2M steel performance in the BOR-60 steam generator, 10:44265 (RA;XA)
Stress Relaxation
Stress relief cracking studies of 2 1/4Cr1Mo steel, 10:44610 (RA;XA)
STEEL-DIN-1-4919
Physical Radiation Effects
Elastic-plastic fracture toughness characteristics of irradiated AISI 316 H stainless steel (Neutron irradiation), 10:44632 (RA;XA)
STEEL-DIN-1-4948
Equivalent to STAINLESS STEEL-304.
Physical Radiation Effects
Effect of small amounts of helium on time dependent properties of DIN 1.4948 (Effects of neutron irradiation), 10:44628 (RA;XA)
Low dose irradiation effects on DIN 1.4948 mechanical properties (Neutron irradiation), 10:44267 (RA;XA)
STEEL-DIN-1-6950
Evaporation
Correlation of experimental and theoretical results for vaporization by simulated disruption, 10:45888 (J;NL)
STEELS
See also AUSTENITIC STEELS
CARBON STEELS
FERRITIC STEELS
MANGANESE STEELS
STAINLESS STEELS
STEEL-ASTM-A387
STEEL-ASTM-A508
STEEL-ASTM-A516
STEEL-ASTM-A542
Acoustic Emission Testing
Characterization of martensitic transformations using acoustic emission, 10:44907 (RA;US)
Adhesion
Fatigue testing of adhesive bonding between steel and glass-fiber reinforced polyester. Report until December 1982, 10:44601 (R;DK;In Danish)
Cavitation
Analytical description of high temperature tensile creep for cavitating materials subjected to time variable loads, 10:44627 (RA;XA)
Chemical Composition
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Corrosion
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Creep
Analytical description of high temperature tensile creep for cavitating materials subjected to time variable loads, 10:44627 (RA;XA)
Hydrogen Embrittlement
Long-term performance of materials used for high-level waste packaging. Annual report, year three, April 1984-April 1985. Volume 4, 10:44639 (R;US)
Mechanical Tests
Development of a standard test for measuring k/sub Ia/ with a modified compact specimen, 10:44901 (R;US)
Phase Transformations
Characterization of martensitic transformations using acoustic emission, 10:44907 (RA;US)
Polyesters
Fatigue testing of adhesive bonding between steel and glass-fiber reinforced polyester. Report until December 1982, 10:44601 (R;DK;In Danish)
Shear Properties
Experimental study on the adiabatic shear bands, 10:44587 (R;FR;In French)
STEEL-X6CRNI1811
Crack Propagation
Fatigue and creep crack growth behaviour of steel-X6CRNI1811 (Type 304 SS) in air and flowing sodium, 10:44622 (RA;XA)
Creep
Influence of sodium on the creep-rupture behaviour of steel-X6CRNI1811 (Type 304 SS) at 823 K, 10:44618 (RA;XA)
Fatigue
Fatigue and creep crack growth behaviour of steel-X6CRNI1811 (Type 304 SS) in air and flowing sodium, 10:44622 (RA;XA)
Low and high cycle fatigue behaviour of steel-X6CRNI1811 (Type 304 SS) in air and flowing sodium, 10:44620 (RA;XA)
Fracture Properties
Influence of sodium on the creep-rupture behaviour of steel-X6CRNI1811 (Type 304 SS) at 823 K, 10:44618 (RA;XA)
Physical Radiation Effects
Influence of medium dose neutron irradiation ($<=10^{22}$ NCM^{-2}) on design properties for elastic analysis of X6CRNI1811 for permanent structures of SNR 300, 10:44268 (RA;XA)
Low dose irradiation effects on DIN 1.4948 mechanical properties (Neutron irradiation), 10:44267 (RA;XA)
Ruptures
Influence of sodium on the creep-rupture behaviour of steel-X6CRNI1811 (Type 304 SS) at 823 K, 10:44618 (RA;XA)
STELLARATORS
Ambipolar Diffusion
Ambipolar electric field in stellarators, 10:45799 (J;AT)
Electric Fields
Ambipolar electric field in stellarators, 10:45799 (J;AT)
Plasma Confinement
Plasma confinement and heating in stellarators. Report on the 5. International Workshop - IAEA Technical Committee Meeting held at Schloss Ringberg (near Lake Tegern, Bavaria), Germany, F.R., 24-28 September 1984, 10:45800 (J;AT)

Plasma Heating
Plasma confinement and heating in stellarators. Report on the 5. International Workshop - IAEA Technical Committee Meeting held at Schloss Ringberg (near Lake Tegern, Bavaria), Germany, F.R., 24-28 September 1984, 10:45800 (J;AT)

STEREOCHEMISTRY
Description of chemical reactions by the method of the Full Optimized Reaction Space. The ring-opening of unsubstituted and substituted cyclopropylidene to allene, 10:44804 (R;US)

STES
See SEASONAL THERMAL ENERGY STORAGE

STIMULATED EMISSION DEVICES
See LASERS

STIRLING ENGINES
Thermodynamic Cycles
Gamma Stirling configuration and simultaneous production of shaft power and heat pumping, 10:44926 (R;US)

STOCHASTIC COOLING
Feasibility Studies
Feasibility study of stochastic cooling of bunches in the SPS, 10:44970 (RA;XC)
Lectures
Stochastic cooling for beginners, 10:44941 (RA;XC)
Stochastic cooling hardware, 10:44968 (RA;XC)
Optimization
Optimum gain and phase for stochastic cooling systems, 10:44969 (RA;XC)

STORMS
Forecasting
Diagnosis and prediction of tropospheric trajectories and cleansing, 10:45073 (RA;US)
Mathematical Models
Oxidizing and Scavenging Characteristics of April Rains - OSCAR data report, 10:45079 (R;US)
Trajectories
Diagnosis and prediction of tropospheric trajectories and cleansing, 10:45073 (RA;US)

STOVER
See AGRICULTURAL WASTES

STRAIN GAGES
Sensitivity
Measurement of small strains in a noisy environment, 10:44908 (J;US)

STRATEGIC PETROLEUM RESERVE
High resolution temperature logging probe, 10:43745 (RA;US)
Drawdown
Analysis of oil withdrawal and distribution tests for the Strategic Petroleum Reserve, 10:43744 (R;US)
Inventories
Strategic Petroleum Reserve quarterly report, 10:43742 (R;US)
Program Management
Strategic Petroleum Reserve quarterly report, 10:43742 (R;US)
Risk Assessment
Risk analysis of the Strategic Petroleum Reserve: theory and preliminary estimates, 10:44491 (R;US)
Simulation
Implications of macroeconomic disruption costs and public-private interactions for strategic oil stockpiling, 10:44493 (R;US)
Size
Inventories, arbitrage, and public-private interactions , 10:43729 (R;US)

STREAK CAMERAS
Performance Testing
Performances of a picosecond streak camera used in conjunction with a photodiode array measuring system, 10:45042 (R;FR)
Photodiodes
Performances of a picosecond streak camera used in conjunction with a photodiode array measuring system, 10:45042 (R;FR)

STREAMS

PLUTONIUM SULFATES
POTASSIUM SULFATES
Air Pollution
Emission inventory for urban particle-model validation in the Philadelphia AQCR (air quality control region). Final report, June 1982-September 1984, 10:45104 (R;US)
Deposition
Estimate of wet, dry and total deposition of atmospheric particles and gases to a canopy, 10:45117 (BA;US)
Ecological Concentration
Observations of aerosol chemical composition and acidity in Northwest and Southeast regions of the US, 10:45115 (J;NL)
Liquid Column Chromatography
Role of metabolism in benzo(a)pyrene carcinogenesis, 10:45262 (R;US)
Measuring Methods
Evaluation of a Modified Method 6 flue gas sampling procedure, 10:45108 (RA;US)
Pollution Sources
Characteristics and origins of sulfur dioxide, total suspended particulates, and sulfates in Western Pennsylvania, 10:45112 (R;US)
SULFONES
Pyrolysis
Procedure for the production of linear thermoplastic polymers from the breakdown products of pyrolysis of p-xylene-bis-sulfones, 10:44696 (TG;US)
SULFONIC ACIDS
Reaction Heat
Reaction calorimetry for coal chemistry and catalysis. Final report, August 1, 1982-July 30, 1985, 10:43652 (R;US)
SULFUR
Atmospheric Chemistry
Field experiments, 10:45086 (RA;US)
Chemical Analysis
Collection methods for the determination of stationary source particulate sulfur and other elements, 10:45109 (RA;US)
Deposition
Effects of atmospheric deposition on forest nutrient cycles, 10:45139 (J;US)
Environmental Effects
Air pollution in the vicinity of large thermal power plants and control, 10:43670 (R;US)
Environmental Transport
Field experiments, 10:45086 (RA;US)
Removal
Seed regeneration processes for coal fired MHD power plants, 10:44509 (R;US)
Sampling
Collection methods for the determination of stationary source particulate sulfur and other elements, 10:45109 (RA;US)
Uses
Use of sulfur as working fluid for topping cycles, 10:44155 (R;FR)
Yields
Continuous testing of the Resox process. Final report, 10:43658 (R;US)
SULFUR CARBIDES
See CARBON SULFIDES
SULFUR COMPOUNDS
See also SULFATES
Environmental Effects
Air pollution in the vicinity of large thermal power plants and control, 10:43670 (R;US)
SULFUR DIOXIDE
Air Pollution
Emission inventory for urban particle-model validation in the Philadelphia AQCR (air quality control region). Final report, June 1982-September 1984, 10:45104 (R;US)
Trends in sulfur dioxide emissions from the electric-utility industry and ambient sulfur dioxide concentrations in the northeastern United States, 1975-1982, 10:44175 (R;US)
Atmospheric Chemistry
Acid Precipitation: a current awareness bulletin, 10:45113 (J;US)
Ecological Concentration
Preliminary estimates of airborne pollutant fluxes to the Camp Branch and Cross Creek watersheds, 10:45088 (R;US)
Excited States
Energy partitioning in elementary gas phase reactions. Progress report, April 1, 1983-August 31, 1985, 10:44773 (R;US)
Foliar Uptake
Preliminary estimates of airborne pollutant fluxes to the Camp Branch and Cross Creek watersheds, 10:45088 (R;US)
Health Hazards
[Effects of sulfur dioxide and respirable particulates on pulmonary function in human subjects], 10:45268 (R;US)
[Effects of sulfur dioxide and respirable particulates on pulmonary function in human subjects]. Progress report, January 1, 1981-December 31, 1981, 10:45267 (R;US)
Long-Range Transport
Characteristics and origins of sulfur dioxide, total suspended particulates, and sulfates in Western Pennsylvania, 10:45112 (R;US)
Mathematical Models
Gas-phase oxidation of SO_2, 10:45084 (RA;US)
Measuring Methods
Evaluation of a Modified Method 6 flue gas sampling procedure, 10:45108 (RA;US)
Monitoring
Air pollution in the vicinity of large thermal power plants and control, 10:43670 (R;US)
Oxidation

Heterogeneous oxidation of SO_2, 10:45085 (RA;US)
Pollution Control Equipment
Industrial boiler SO_2 cost report, 10:45100 (R;US)
Pollution Sources
Characteristics and origins of sulfur dioxide, total suspended particulates, and sulfates in Western Pennsylvania, 10:45112 (R;US)
Precipitation Scavenging
Estimate of wet, dry and total deposition of atmospheric particles and gases to a canopy, 10:45117 (BA;US)
Removal
Adipic acid enhanced flue gas desulfurization process for industrial boilers. Volume 2. Technical assessment. Project summary, 10:43664 (R;US)
Adipic acid enhanced flue gas desulfurization process for industrial boilers: Volume 1. Field test results. Project summary, 10:43665 (R;US)
Continuous emission monitoring for industrial boilers, General Motors Corporation, Assembly Division, St. Louis, Missouri.

Volume I. System configuration and results of the operational test period. Final report, 10:43660 (R;US)
Development of a combined NO/sub x/SO_2 removal system based on ZnO scrubbing technology. Fourteenth monthly technical progress report, July 1-July 31, 1985, 10:43655 (R;US)
Pilot study of Flakt-Boliden desulfurization process. Final report, 10:43659 (R;US)
Toxicity
Effects of sulfur oxides in the atmosphere on vegetation: revised chapter 5 for air quality criteria for sulfur oxides, 10:45272 (R;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1984-March 15, 1985, 10:45350 (R;US)
SULFUR SULFIDES
See SULFUR
SULFURIC ACID
Environmental Transport
Fate of sulfuric acid aerosol in the atmosphere, 10:45095 (R;SE)
Measuring Methods
Evaluation of a Modified Method 6 flue gas sampling procedure, 10:45108 (RA;US)
SUNFLOWERS
Translocation
Use of tritium-labelled water in the study of transfers and exchanges in Helianthus annuus, 10:45208 (R;FR;In French)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCOMPUTERS
Design
Short report and proposal for three-month extension on design, evaluation, and use of high performance computer systems, 10:45910 (R;US)
Research Programs
Short report and proposal for three-month extension on design, evaluation, and use of high performance computer systems, 10:45910 (R;US)
SUPERCONDUCTING MAGNETS
Design
Contribution to study and realization of 20-Tesla superconducting magnet, 10:44858 (R;FR;In French)
Electrical Insulators
Mechanical properties of candidate insulators for fusion reactors, 10:45837 (RA;US)
Strengths of unirradiated thin sheet organic laminate insulators loaded perpendicular to the laminations, 10:45838 (RA;US)
Equipment Protection Devices
Simulation of quenches in SSC magnets with passive quench protection, 10:44972 (R;US)
Magnetic Fields
Effect of manufacturing errors on field quality of dipole magnets for the SSC, 10:44979 (R;US)
Superconducting quadrupoles, 10:44951 (R;US)
Materials Testing
Progress on the establishment of a national low-temperature neutron irradiation facility (NLTNIF), 10:45839 (RA;US)
Quenching
Simulation of quenches in SSC magnets with passive quench protection, 10:44972 (R;US)
Stress Analysis
Contribution to study and realization of 20-Tesla superconducting magnet, 10:44858 (R;FR;In French)
Superconducting Composites
Contribution to study and realization of 20-Tesla superconducting magnet, 10:44858 (R;FR;In French)
Test Facilities
Progress on the establishment of a national low-temperature neutron irradiation facility (NLTNIF), 10:45839 (RA;US)
SUPERCONDUCTING QUANTUM INTERFERENCE DEVI
See SQUID DEVICES
SUPERCONDUCTING SUPER COLLIDER
Control Systems
Control problems in very large accelerators, 10:44990 (R;US)
Superconducting Magnets
Effect of manufacturing errors on field quality of dipole magnets for the SSC, 10:44979 (R;US)
Simulation of quenches in SSC magnets with passive quench protection, 10:44972 (R;US)
SUPERCONDUCTING WIRES
Fabrication
Development of high performance superconductors by powder metallurgy, 10:44875 (J;US)
Performance
Development of high performance superconductors by powder metallurgy, 10:44875 (J;US)
SUPERCONDUCTORS
Critical Current
Field enhancement by magnetic flux concentration, 10:44859 (R;DE;In German)
SUPERCRITICAL FLUID CHROMATOGRAPHY
Analysis of semi-volatile organic compounds using supercritical fluid methodologies, 10:44756 (R;US)
SUPERGRAVITY
Geometry
Intrinsic geometry of N=2 supersymmetry and supergravity, 10:45562 (R;SU)
Multiplets
Antisymmetric tensor gauge potential in curved superspace and a 16 + 16 supergravity multiplet, 10:45758 (R;FR)
Spin (3/2,1) multiplet and superspace geometry, 10:45759 (R;FR)
Reviews
Supersymmetry-supergravity, 10:45565 (R;BR;In Portuguese)
SUPERHEATERS
Welded Joints
Seminar on dissimilar welds in fossil-fired boilers: proceedings, 10:44161 (R;US)
SUPERHEAVY ELEMENTS
See TRANS 104 ELEMENTS
SUPERLATTICES
Fabrication
Light-induced excess conductivity and the role of argon in the deposition of doping-modulated amorphous silicon superlattices, 10:44723 (J;US)
Photoconductivity
Light-induced excess conductivity and the role of argon in the deposition of doping-modulated amorphous silicon superlattices, 10:44723 (J;US)
Photoluminescence
Lasing transitions in GaAs/GaAs/sub 1-x/P/sub x/ strained-layer superlattices with x = 0.1—0.5, 10:44880 (J;US)
Stimulated Emission
Lasing transitions in GaAs/GaAs/sub 1-x/P/sub x/ strained-layer superlattices with x = 0.1—0.5, 10:44880 (J;US)
SUPERNOVAE
Hydrodynamic Model
Theoretical models for Type I and Type II supernova, 10:45335 (R;US)
Star Evolution
Theoretical models for Type I and Type II supernova, 10:45335 (R;US)
SUPERSYMMETRY
[Topics in theoretical physics]. Progress report, 10:45551 (R;US)
Exotic Resonances
Gluinonium: The hydrogen atom of supersymmetry, 10:45523 (J;NL)
Geometry
Intrinsic geometry of N=2 supersymmetry and supergravity, 10:45562 (R;SU)
Grand Unified Theory
Quark mass matrices in a SUSY composite model, 10:45566 (J;NL)
Ising Model
Supersymmetric statistical models on the lattice, 10:45540 (J;NL)

Lattice Field Theory
Superlattice supersymmetry, 10:45543 (J;NL)
Reviews
Review of supersymmetric quantum mechanics, 10:45541 (J;NL)
Supersymmetry-supergravity, 10:45565 (R;BR;In Portuguese)
Space Groups
Superlattice supersymmetry, 10:45543 (J;NL)
Symmetry Breaking
Nonlinear realizations and the partial breaking of extended supersymmetry, 10:45544 (J;NL)
Supersymmetry breaking at finite temperature and the existence of the Goldstone fermion, 10:45542 (J;NL)
Vacuum States
Stability of supersymmetric ground state in chiral theories, 10:45545 (J;NL)

SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY

SUPPLY DISRUPTION
Economic Impact
Impact of oil market disruptions on other fuel prices, 10:44488 (R;US)
Oil supply disruptions and the optimal tariff in a dynamic stochastic equilibrium model, 10:44483 (R;US)
Emergency Plans
Emergency demand restraint measures: a descriptive survey, 10:44482 (R;US)
Game Theory
Dynamic Nash game model of oil market disruptions and strategic stockpiling, 10:44489 (R;US)
Government Policies
Oil supply disruptions and the optimal tariff in a dynamic stochastic equilibrium model, 10:44483 (R;US)
Policy responses to oil disruption risks: an analytical overview , 10:44490 (R;US)
International Cooperation
Benefits of International Energy Cooperation: a theoretical perspective, 10:44495 (R;US)
Simulation
Implications of macroeconomic disruption costs and public-private interactions for strategic oil stockpiling, 10:44493 (R;US)

SUPPORTS
Manufacturing
Mechanical engineering, 10:44863 (RA;ZA)

SURFACE MINING
Environmental Impacts
Draft environmental impact statement, Cummins Creek Project, Fayette County, Texas, 10:43669 (R;US)
Impact of surface mining and conversion of coal on ground water and control measures in Poland, 10:43663 (RA;US)
Land Reclamation
[National Coal Policy Project]. Mining Task Force report submitted for review by the plenary, September 26-27, 1979, 10:43682 (R;US)
Guide for the use of organic materials as mulches in reclamation of coal-mine soils in the eastern United States. General technical report (final), 10:43667 (R;US)
Legislation
[National Coal Policy Project]. Mining Task Force report submitted for review by the plenary, September 26-27, 1979, 10:43682 (R;US)
Pollution Regulations
EPA enforcement and new source surface mining requirements and application in West Virginia, USA, 10:43662 (RA;US)
Regulations
[National Coal Policy Project]. Mining Task Force report submitted for review by the plenary, September 26-27, 1979, 10:43682 (R;US)

SURFACE WATERS
See also LAKES
SEAS
STREAMS
WATER RESERVOIRS
Acidification
Acid deposition and the acidification of soils and waters, 10:45089 (R;US)

SURRY POWER STATION UNIT-1
See SURRY-1 REACTOR

SURRY POWER STATION UNIT-2
See SURRY-2 REACTOR

SURRY-1 REACTOR
Gravel Neck, Virginia, USA
Engineered Safety Systems
Technical evaluation of the susceptibility of safety-related systems to flooding caused by the failure of non-Category I systems for Surry Units 1 and 2, 10:44434 (R;US)

SURRY-2 REACTOR
Gravel Neck, Virginia, USA
Engineered Safety Systems
Technical evaluation of the susceptibility of safety-related systems to flooding caused by the failure of non-Category I systems for Surry Units 1 and 2, 10:44434 (R;US)

SUSPENSIONS (FUEL)
See FUEL SLURRIES

SWAMPS
Uranium Deposits
Uranium enrichment in European peat bogs, 10:43785 (RA;XA)

SWEAT GLANDS
See SKIN

SWEDEN
Granites
Large-scale hydraulic conductivity measurements in fractured granite, 10:43886 (J;US)
Peat
Uranium enrichment in European peat bogs, 10:43785 (RA;XA)
Solar District Heating
Large-scale solar heating technology: Ingelstad - a solar group heating plant without heat pumps, 10:44077 (R;SE)
Solar-Assisted Heat Pumps
Market potential for solar assisted ground coupled heat pumps, 10:44056 (RA;XE)
Swamps
Uranium enrichment in European peat bogs, 10:43785 (RA;XA)

SYMBOLIC LOGIC
See MATHEMATICAL LOGIC

SYMMETRY
See also CHIRAL SYMMETRY
SUPERSYMMETRY
Gauge Invariance
Pauli-Guersey symmetry in gauge theories, 10:45537 (R;FR)

SYMMETRY BREAKING
Goldstone Bosons
Supersymmetry breaking at finite temperature and the existence of the Goldstone fermion, 10:45542 (J;NL)
Order Parameters
Contribution to the study of spontaneous breakdown of the chiral symmetry in gauge theories, 10:45538 (R;FR;In French)
Reviews
Symmetry breaking at high temperature, 10:45558 (RA;PL)

SYNCHROTRON RADIATION
Radiometry using synchrotron radiation. Final report, 10:45045 (R;US)

SYNCHROTRON RADIATION SOURCES
Beam Bending Magnets
Lattice and bypass design for a coherent xuv facility, 10:45002 (R;US)
Beam Focusing Magnets
Lattice and bypass design for a coherent xuv facility, 10:45002 (R;US)
Wiggler Magnets
CSEM-steel hybrid wiggler/undulator magnetic field studies, 10:44980 (R;US)

SYNCRUDE
See SYNTHETIC PETROLEUM

SYNTHETIC CRUDE OIL
See SYNTHETIC PETROLEUM

SYNTHETIC FUELS
See also ALCOHOL FUELS
SYNTHETIC PETROLEUM

Burners
Guidebook for the use of synfuels in electric utility combustion systems. Volume 3. Liquid fuels derived from shale and tar sands. Final report, 10:43766 (R;US)
Combustion
Development of new combustor technologies for future alternative aero-engine fuels - phase 1, 10:44555 (R;DE;In German)
Guidebook for the use of synfuels in electric utility combustion systems. Volume 3. Liquid fuels derived from shale and tar sands. Final report, 10:43766 (R;US)
Environmental Impacts
Opportunities for health and environmental research from an industrial perspective, 10:43940 (BA;US)
Status of and prospects for synthetic fuels research and production, 10:43941 (BA;US)
Environmental Policy
Status of and prospects for synthetic fuels research and production, 10:43941 (BA;US)
Health Hazards
Opportunities for health and environmental research from an industrial perspective, 10:43940 (BA;US)
Legislation
Status of and prospects for synthetic fuels research and production, 10:43941 (BA;US)
Manuals
Guidebook for the use of synfuels in electric utility combustion systems. Volume 3. Liquid fuels derived from shale and tar sands. Final report, 10:43766 (R;US)
Processing
Linking R and D to problems experienced in solids processing, 10:44917 (R;US)
Production
Animal faeces can be recycled as useful synthetic oils, 10:43926 (RA;US)
Research Programs
Opportunities for health and environmental research from an industrial perspective, 10:43940 (BA;US)
Status of and prospects for synthetic fuels research and production, 10:43941 (BA;US)

SYNTHETIC FUELS INDUSTRY
Research Programs
Opportunities for health and environmental research from an industrial perspective, 10:43940 (BA;US)

SYNTHETIC PETROLEUM
Toxic Materials
Light activation of genotoxic components in natural and synthetic crude oils, 10:43738 (BA;US)

SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

SYSTEM FAILURE ANALYSIS
See also FAULT TREE ANALYSIS
Random Number Generators
Novel random-pulser concept for empirical reliability studies of complex systems, 10:45050 (R;DE)

T

T INVARIANCE
Glauber Theory
Unitarity and time reversal in the Glauber model, 10:45553 (RA;DE)
Semileptonic Decay
Time-reversal-violating effects in semileptonic decays in SU(2)sub(L) x SU(2)sub(R) x U(1) electroweak models, 10:45481 (RA;DE)

T-10 TOKAMAK
ICR Heating
Ion-cyclotron heating with low dissipation in T-10 tokamak, 10:45823 (TG;US)

TAILINGS
Solid residue separated in the preparation of various products.
Management
Uranium tailings in Canada. Regulation and management, 10:43860 (R;CA)

TANDEM ELECTROSTATIC ACCELERATORS
Prior to February 1979,information was indexed to Van de Graaff Accelerators.
Surface Cleaning
Arc discharge conditioning test on the Oak Ridge 25 URC accelerator, 10:44931 (R;US)

TANDEM MIRROR DEVICES
See TMR REACTORS
TMX DEVICES

TANDEM MIRROR TYPE REACTORS
See TMR REACTORS

TANDEM MIRRORS
Prior to September 1983 this concept was indexed to TMX DEVICES.
See also TMX DEVICES
Neutral Atom Beam Injection
Low-energy beam pumping in TARA reactor design, 10:45802 (J;AT)
Thermal Barriers
Low-energy beam pumping in TARA reactor design, 10:45802 (J;AT)

TANTALUM
Internal Friction
Evaluation of anelastic evidence for interstitial solute binding in bcc metals, 10:44636 (R;US)
Interstitials
Evaluation of anelastic evidence for interstitial solute binding in bcc metals, 10:44636 (R;US)

TANTALUM 181 TARGET
Beryllium 9 Reactions
Structure of ^{186}Ir and decoupling phenomena in doubly-odd deformed nuclei, 10:45657 (J;NL)
Carbon 12 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
Neutron Reactions
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)
Study on neutron capture gamma-rays in the resolved and unresolved resonance regions, 10:45613 (RA;JP;In Japanese)
Oxygen 18 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)

TANTALUM HYDRIDES
Diffusion
Localized vibrations of hydrogen in metals, 10:45392 (RA;US)
Potentials
Localized vibrations of hydrogen in metals, 10:45392 (RA;US)
Trapping
Localized vibrations of hydrogen in metals, 10:45392 (RA;US)

TANZANIA
Geochemical Surveys
Surficial uranium occurrences in the United Republic of Tanzania, 10:43790 (RA;XA)

TARIFFS
Government Policies
Tariffs and the economic costs of an oil disruption, 10:44494 (R;US)

TAU LEPTONS
See TAU PARTICLES

TAU PARTICLES
Weak Charged Currents
V-A structure of the charged weak current of the tau lepton and the reaction $\gamma + N \rightarrow$ lsup(+-) + upsilonsub(l) + N', 10:45480 (RA;DE)
Weak Particle Decay
Measurements of tau-lepton production and decay, 10:45418 (R;DE)

TAUONS
See TAU PARTICLES

TAXES
Economic Impact
Analysis of the impacts of the President's tax proposal on major sectors of the energy industry, 10:44478 (R;US)
TECHNETIUM
Geochemistry
Neptunium and technetium behavior in geological systems, 10:43861 (RA;US)
TECHNETIUM 99
Lung Clearance
Lung clearance of inhaled /sup 99m/Tc-DTPA in the dog, 10:45205 (J;US)
Uptake
Experimental study of the time dependence of uptake from soil of ^{137}Cs, ^{106}Ru, ^{144}Ce and ^{99}Tc into green vegetables, wheat and potatoes, 10:45142 (R;GB)
TECHNETIUM ISOTOPES
See also TECHNETIUM 99
Geochemistry
Radionuclide Migation Project 1984 progress report, 10:45180 (R;US)
TECHNICAL WRITING
Communicating across barriers at home and abroad, 10:45897 (R;US)
TECHNOLOGY TRANSFER
Technology transfer is opportunity transfer, 10:44465 (R;US)
TEETH
Biomedical Radiography
Information value of different methods of dental radiology with special regard to periodontal diagnosis, 10:45231 (R;DE;In German)
TELLURIUM
Partial Pressure
Effect of partial pressures on mass transport of CdTe by VUVG, 10:44710 (RA;IL)
Vapor Pressure
Effect of partial pressures on mass transport of CdTe by VUVG, 10:44710 (RA;IL)
TELLURIUM 125
NMR Spectra
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH_3)/sub n/CR'($COOC_2H_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH_3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Radiochemistry
Organotellurium compounds of biological interest - unique properties of the N-Chlorosuccinimide oxidation product of 9-telluraheptadecanoic acid, 10:44819 (J;US)
Tracer Techniques
Organotellurium compounds of biological interest - unique properties of the N-Chlorosuccinimide oxidation product of 9-telluraheptadecanoic acid, 10:44819 (J;US)
Uptake
Organotellurium compounds of biological interest - unique properties of the N-Chlorosuccinimide oxidation product of 9-telluraheptadecanoic acid, 10:44819 (J;US)
TELLURIUM 128
Double Beta Decay
Recent progress in laboratory $\beta\beta$-decay experiments and their interpretation, 10:45627 (R;US)
TELLURIUM 130
Double Beta Decay
Recent progress in laboratory $\beta\beta$-decay experiments and their interpretation, 10:45627 (R;US)
TELLURIUM ADDITIONS
Metallurgical Effects
Armor - preliminary study of the effect of several alloying elements and addition agents upon the metallurgical properties of manganese-molybdenum steel used in armor, 10:44579 (R;US)
TELLURIUM COMPOUNDS
Absorption Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH_3)/sub n/CR'($COOC_2H_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH_3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Chemical Preparation
Organotellurium compounds of biological interest - unique properties of the N-Chlorosuccinimide oxidation product of 9-telluraheptadecanoic acid, 10:44819 (J;US)
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH_3)/sub n/CR'($COOC_2H_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH_3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
Mass Spectroscopy
Synthesis and spectral properties of diethyl organylchalcogenoalkyl(alkyl)malonates, RX(CH_3)/sub n/CR'($COOC_2H_5$)$_2$, and 5-alkyl-5-(organylchalcogenoalkyl)barbiturates, RX(CH_3)/sub n/C(R')CONHC(Y)NHCO (X = Se, Te), 10:44820 (J;NL)
TEMPERATURE (AMBIENT)
See AMBIENT TEMPERATURE

Yields
New technology concept for two-stage liquefaction of coal, 10:43626 (R;US)

TSUNAMIS
Mathematical Models
Three-dimensional modeling of tsunami waves, 10:45321 (R;US)

TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
See also PRESSURE TUBES
Corrosion
Corrosion of heat exchanger tubes by flue gases containing HCl produced during the incineration of refuse, 10:44918 (TJ;GB)
Heat Transfer
Lumped-parameter models for transient conduction in nuclear reactor components, 10:44380 (R;US)
Performance
Steam generator tube performance. Experience with water-cooled nuclear power reactors during 1981, 10:44181 (R;CA)

TUBES (CONDUITS)
See PIPES

TUFF
Compressible Flow
Pore fluid migration model for stress cage decay, 10:45057 (R;US)

Grain Density
Grain density measurements of ash flow tuffs: an experimental comparison of water immersion and gas intrusion pycnometer techniques, 10:43871 (R;US)
Permeability
Coupled hydrothermal flows of liquid and vapor in welded tuff: numerical modeling of proposed experiment, 10:43878 (R;US)
Pore fluid migration model for stress cage decay, 10:45057 (R;US)
Slip-flow experiments in welded tuff: the Knudsen diffusion problem, 10:43877 (R;US)
Porosity
Pore fluid migration model for stress cage decay, 10:45057 (R;US)
Radionuclide Migration
Contact zones and hydrothermal systems as analogues to repository conditions, 10:43890 (R;US)
Rock Mechanics
Evaluation of the accuracy of continuum-based computational models in relation to field measurements in welded tuff (Jointed welded tuff), 10:43876 (R;US)
Shock Waves
Stress-wave calculations of two containment experiments, 10:45058 (R;US)
Two-Phase Flow
Coupled hydrothermal flows of liquid and vapor in welded tuff: numerical modeling of proposed experiment, 10:43878 (R;US)
Water Saturation
Coupled hydrothermal flows of liquid and vapor in welded tuff: numerical modeling of proposed experiment, 10:43878 (R;US)

TUMORS
See NEOPLASMS

TUNGSTEN FLUORIDES
Production
Manufacture of high purity metal fluorides, 10:44781 (R;US)

TURBINE BLADES
Computerized Simulation
Calculation of trajectories and throw-lengths for torn-off windmill blades, 10:44145 (R;DK;In Danish)
Design
Construction, testing, and evaluation of Schmidt folding-wing water turbine prototype. Final report, 10:44856 (R;US)
Eigenfrequency
CBEAM4. Calculation of eigen oscillations etc. for centrifugally loaded beams, 10:44144 (R;DK;In Danish)
Failures
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Fatigue
Fatigue testing of glassfiber-reinforced polyester, 10:44690 (R;DK;In Danish)
Fatigue tests of wing root section for Nibe Windmill B, 10:44143 (R;DK;In Danish)
Materials Testing
Evaluation of protective coatings for hot components of combustion turbines. Final report, 10:44160 (R;US)
Mechanical Vibrations
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Nondestructive Testing
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Performance Testing
Construction, testing, and evaluation of Schmidt folding-wing water turbine prototype. Final report, 10:44856 (R;US)
Protective Coatings
Evaluation of protective coatings for hot components of combustion turbines. Final report, 10:44160 (R;US)
Reliability
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Risk Assessment
Risk calculation for personal injuries in a windmill accident in case of a torn-off blade, 10:44146 (R;DK;In Danish)
Rotation
CBEAM4. Calculation of eigen oscillations etc. for centrifugally loaded beams, 10:44144 (R;DK;In Danish)
Service Life
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Stress Corrosion
Steam turbine blade reliability seminar and workshop: proceedings, 10:44162 (R;US)
Trajectories
Risk calculation for personal injuries in a windmill accident in case of a torn-off blade, 10:44146 (R;DK;In Danish)

TURKEY
Geothermal Resources
Geothermal resources of medium temperature. Study of type regions, 10:44113 (R;FR;In French)

TURNOVER (RADIONUCLIDES)
See RADIONUCLIDE KINETICS

TWO-PHASE FLOW
Flow Rate
Investigations into the pressure drop and mass flow distribution of two-phase flow in rectangular T-junctions, 10:44897 (R;DE;In German)
Pressure Drop
Investigations into the pressure drop and mass flow distribution of two-phase flow in rectangular T-junctions, 10:44897 (R;DE;In German)

TZM
See ALLOY-TZM

U

U-3 GROUPS
Irreducible Representations
Problem of the additional quantum number ω in the decomposition U(3) x U(3) → U(3), 10:45536 (R;PL)
Quantum Numbers
Problem of the additional quantum number ω in the decomposition U(3) x U(3) → U(3), 10:45536 (R;PL)

UAR

ULTRACENTRIFUGE ENRICHMENT PLANTS
See CENTRIFUGE ENRICHMENT PLANTS

ULTRASONIC TESTING
Elastic Scattering
Flaw characterization by combining system identification and elastic wave scattering theory, 10:44904 (RA;US)

ULTRAVIOLET RADIATION
Correlations
Light activation of genotoxic components in natural and synthetic crude oils, 10:43738 (BA;US)
Photochemical Reactions
Light activation of genotoxic components in natural and synthetic crude oils, 10:43738 (BA;US)

UNDERGROUND
Communications
ELF-VLF Communications through the Earth Project report for calendar year 1984. Revision 1, 10:44870 (R;US)

UNDERGROUND BUILDINGS
See EARTH-COVERED BUILDINGS

UNDERGROUND DISPOSAL
Radionuclide Migration
Effect on localized waste-container failure on radionuclide transport from an underground nuclear waste vault, 10:43824 (R;CA)

UNDERGROUND EXPLOSIONS
Cavities
Pore fluid migration model for stress cage decay, 10:45057 (R;US)

Containment
Stress-wave calculations of two containment experiments, 10:45058 (R;US)
Images
Electronic Pinex: the acquisition of nuclear weapons images in underground detonations, 10:45070 (RA;US)
Seismic Detection
Low-frequency spectral minimum in underground explosion P spectra. Technical report, November 1982-November 1983, 10:45069 (R;US)
UNDERGROUND GASIFICATION
See IN-SITU GASIFICATION
UNDERGROUND HEAT DISTRIBUTION SYSTEMS
See HEAT DISTRIBUTION SYSTEMS
UNDERGROUND MINING
See also LONGWALL MINING
Roof Bolts
Comparative laboratory evaluation of resin-grouted roof bolt elements. Report of Investigations/1985, 10:43684 (R;US)
UNIFIED GAUGE MODELS
See also GRAND UNIFIED THEORY
WEINBERG LEPTON MODEL
Conservation Laws
Conservation of electric charge around a monopole of finite size, 10:45567 (J;NL)
Lattice Field Theory
Classical instanton on a 4-dimensional periodic lattice, 10:45550 (R;DE)
Iterative hopping expansion algorithm for Monte Carlo calculations with very light fermions, 10:45548 (R;DE)
Kadanoff-Wilson transformations in quantum gauge theories, 10:45549 (R;DE)
Magnetic Monopoles
Conservation of electric charge around a monopole of finite size, 10:45567 (J;NL)
Supersymmetry
Stability of supersymmetric ground state in chiral theories, 10:45545 (J;NL)
UNION OF SOVIET SOCIALIST REPUBLICS
See USSR
UNITED ARAB REPUBLIC
See EGYPTIAN ARAB REPUBLIC
UNITED KINGDOM
Peat
Uranium enrichment in European peat bogs, 10:43785 (RA;XA)
Solar-Assisted Heat Pumps
Market potential for solar assisted ground coupled heat pumps, 10:44056 (RA;XE)
Swamps
Uranium enrichment in European peat bogs, 10:43785 (RA;XA)
UNITED STATES OF AMERICA

UPSILON-10000 RESONANCES
Hadronic Particle Decay
Search for narrow states coupling to tau pairs in radiatiive Y decays, 10:45417 (R;DE)
Spectroscopy of the Y(2S) with the Crystal Ball, 10:45456 (R;US)
Radiative Decay
Search for narrow states coupling to tau pairs in radiatiive Y decays, 10:45417 (R;DE)
Spectroscopy of the Y(2S) with the Crystal Ball, 10:45456 (R;US)
UPSILON-9500 RESONANCES
Leptonic Decay
Search for narrow states coupling to tau pairs in radiatiive Y decays, 10:45417 (R;DE)
Radiative Decay
Bound-state effects in Y -> γ+ resonance, 10:45524 (J;NL)
Search for narrow states coupling to tau pairs in radiatiive Y decays, 10:45417 (R;DE)
URANIUM
See also NATURAL URANIUM
Alpha Spectroscopy
Uranium alpha spectroscopy and angular dependence for SSNTD, 10:44767 (J;GB)
Excretion
Correlation analysis of first phase monitoring results for uranium mill workers, 10:45229 (R;CA)
Luminescence
Initial stages of uranium oxidation: a surface study, 10:43812 (R;US)
Oxidation
Initial stages of uranium oxidation: a surface study, 10:43812 (R;US)
Oxidation of tervalent uranium Usub(aq)sup(3+) by free radicals in aqueous solutions, 10:44843 (RA;IL)
Radioecological Concentration
Weldon Spring Site environmental monitoring report, calendar year 1984, 10:43888 (R;US)
Recovery
Uranium recovery from phosphoric acid with selective resins, 10:43807 (RA;IL)
Retention
Testing and evaluation of existing techniques for identifying uptakes and measuring retention of uranium in mill workers, 10:45228 (R;CA)
Separation Processes
Uranium recovery from phosphoric acid with selective resins, 10:43807 (RA;IL)
Solvent Extraction
Improved radiochemical method for the isolation of uranium from other actinides in urine, 10:44839 (R;CA)
Synthesis of new polyphosphonic acids, uranium extracting agents in a phosphoric medium, 10:43806 (R;FR;In French)
Tailings
Uranium tailings in Canada. Regulation and management, 10:43860 (R;CA)
Uptake
Testing and evaluation of existing techniques for identifying uptakes and measuring retention of uranium in mill workers, 10:45228 (R;CA)
URANIUM 233
Retention Functions
Comparison of the U-233 dog data of Stevens et al. with uranium retention functions in ICRP Publication 30 and a 3-compartment mammillary model for uranium, 10:45217 (R;US)
URANIUM 235
Coincidence Methods
Confirmatory measurements of UF_6 using the neutron self-interrogation method, 10:43906 (R;US)
Fractionation
Uranium isotope fractionation resulting from UF_6 vapor distillation from containers, 10:43809 (R;US)
Gamma Spectroscopy
Application of the limited frequency-unannounced access strategy measurement technology in gas centrifuge enrichment plants, 10:43902 (R;US)
Internal Conversion
Change of the conversion rate of E3 isomer of sup(235m)U (76.8 eV, $1/2^+ \rightarrow 7/2^-$) versus variation of valent zone configuration of atomic shell, 10:45668 (R;SU;In Russian)
Laser Isotope Separation
Laser isotopic separation. Performance estimation, 10:43808 (R;FR;In French)
Real-time fluid flow model for control of solidification, 10:43811 (R;US)

Nuclear Materials Management
Application of the limited frequency-unannounced access strategy measurement technology in gas centrifuge enrichment plants, 10:43902 (R;US)
Radioassay
Data/evaluation for operator-inspector differences for a specific NDA instrument, 10:44753 (R;XE)
X-Ray Fluorescence Analysis
Application of the limited frequency-unannounced access strategy measurement technology in gas centrifuge enrichment plants, 10:43902 (R;US)

URANIUM 238
Decay
Gamma branch from the sup(238)U shape isomer, 10:45679 (BA;HU)
Fractionation
Uranium isotope fractionation resulting from UF_6 vapor distillation from containers, 10:43809 (R;US)
Isomeric Nuclei
Gamma branch from the sup(238)U shape isomer, 10:45679 (BA;HU)
Resonance Absorption
Space and energy dependence of uranium 238 resonance capture rate in a heterogeneous lattice, 10:44283 (R;FR;In French)

URANIUM 238 REACTIONS
Deep Inelastic Heavy Ion Reactions
Dynamics of the mass asymmetry, 10:45685 (RA;DE)

URANIUM 238 TARGET
Carbon 12 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)
Neutron Reactions
Measurements of neutron cross sections at JAERI linac, 10:45626 (RA;JP;In Japanese)
Measurement of fast neutron induced fission cross sections of ^{232}Th, ^{238}U, ^{237}Np and ^{243}Am, 10:45671 (RA;JP;In Japanese)
Oxygen 18 Reactions
Cooperative production of neutral pions and high-energy photons in nucleus-nucleus collisions at 60-84 MeV/u, 10:45598 (R;DE;In German)

URANIUM ALLOYS
See also URANIUM BASE ALLOYS
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)
Segregation
Quantitative interpretation of surface segregation in air-exposed intermetallic compounds: UNiAl as a test case, 10:44655 (J;CH)

URANIUM ARSENIDES
Fermi Level
Itinerant f-electron behavior in Ce and U compounds, 10:44596 (R;US)

URANIUM BASE ALLOYS
Impact Tests
Elastic-plastic waves in UV 0.2 Uranium alloy, 10:44584 (R;FR)
Phase Transformations
X-ray diffraction study of reversible deformation mechanisms in the aged uranium-6.5 niobium alloy, 10:44650 (R;US)

URANIUM COMPOUNDS
See also URANIUM ARSENIDES
URANIUM OXIDES
URANIUM PHOSPHIDES
URANIUM SILICIDES
Chemical Reaction Kinetics
Microcalorimetric measurement of reaction enthalpies in solutions of uranium and neptunium compounds, 10:44727 (J;NL)
Formation Heat
Microcalorimetric measurement of reaction enthalpies in solutions of uranium and neptunium compounds, 10:44727 (J;NL)

URANIUM DEPOSITS
See also YEELIRRIE DEPOSIT
Surficial uranium deposits in Australia, 10:43774 (RA;XA)
Surficial uranium deposits of northern Chile, 10:43784 (RA;XA;In Spanish)
Surficial uranium deposits in Mauritania, 10:43786 (RA;XA;In French)
Surficial uranium deposits in Namibia, 10:43787 (RA;XA)
Surficial uranium deposits in Somalia, 10:43788 (RA;XA)
Surficial uranium deposits in South Africa, 10:43789 (RA;XA)
Surficial uranium occurrences in the United Republic of Tanzania, 10:43790 (RA;XA)
Surficial uranium deposits in the United States of America, 10:43791 (RA;XA)
Biogeochemistry
Uranium biogeochemistry: A bibliography and report on the state of the art. Report prepared by the Biogeochemical Prospecting for Uranium Working Group, a subgroup of the Joint NEA/IAEA Group of Experts in R and D in uranium exploration techniques, 10:43794 (R;XA)
Classification
Definition and classification of surficial uranium deposits, 10:43768 (RA;XA)
Exploration
Application of supervised classification to Landsat data in the exploration for surficial uranium deposits - an example from Western Australia, 10:43796 (RA;XA)
Application of Landsat imagery for delineating potential surficial uranium deposits in Namibia, 10:43797 (RA;XA)
Assessment of the use of hydrogeochemistry in exploration for calcrete uranium in Australia, 10:43798 (RA;XA)
Exploration for surficial uranium deposits, 10:43795 (RA;XA)
Geostatistical evaluation of the Napperby surficial uranium deposit, Northern Territory, Australia, 10:43801 (RA;XA)
Lake Austin uranium deposit, Western Australia, 10:43776 (RA;XA)
Lake Maitland uranium deposit, 10:43804 (RA;XA)
Natural and induced disequilibrium in surficial uranium deposits, 10:43800 (RA;XA)
Regional setting, distribution and genesis of surficial uranium deposits in calcretes and associated sediments in Western Australia, 10:43775 (RA;XA)
Surficial uranium deposits in Algeria, 10:43802 (RA;XA;In French)
Surficial uranium deposits in Argentina, 10:43803 (RA;XA)
Surficial uranium deposits in Botswana, 10:43782 (RA;XA)
Geochemistry
Hinkler Well - Centipede uranium deposits, 10:43777 (RA;XA)
Lake Austin uranium deposit, Western Australia, 10:43776 (RA;XA)
Lake Raeside uranium deposit, 10:43778 (RA;XA)
Lake Way uranium deposit, Wiluna, Western Australia, 10:43779 (RA;XA)
Uranium series disequilibrium in the carnotite deposits of Western Australia, 10:43781 (RA;XA)
Geomorphology
Lake Austin uranium deposit, Western Australia, 10:43776 (RA;XA)
Regional setting, distribution and genesis of surficial uranium deposits in calcretes and associated sediments in Western Australia, 10:43775 (RA;XA)
Surficial uranium deposits: summary and conclusions, 10:43792 (RA;XA)
Meetings
Surficial uranium deposits. Report of the Working Group on Uranium Geology organized by the IAEA, 10:43793 (R;AT)
Metamorphism
Surficial uranium occurrences in relation to climate and physical setting, 10:43770 (RA;XA)
Petrogenesis
Genesis of surficial uranium deposits, 10:43772 (RA;XA)
Regional setting, distribution and genesis of surficial uranium deposits in calcretes and associated sediments in Western Australia, 10:43775 (RA;XA)
Prospecting
Calculation of the carnotite solubility index, 10:43799 (RA;XA)
Surficial uranium deposits in Canada, 10:43783 (RA;XA)

URANIUM DIOXIDE
Chemical Preparation
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
Density
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
Dissolution
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
Grain Size
Dissolution of ThO_2, UO_2 and PuO_2 in nitric acid, 10:43816 (R;DE;In German)
URANIUM HEXAFLUORIDE
Accounting
Confirmatory measurements of UF_6 using the neutron self-interrogation method, 10:43906 (R;US)
Chemical Reactions
Reaction of two amino-acids: alanine and threonine with UF_6 in anhydrous HF, 10:44840 (R;FR;In French)
Isotope Ratio
Uranium isotope fractionation resulting from UF_6 vapor distillation from containers, 10:43809 (R;US)
Sampling
Uranium hexafluoride subsampling system, 10:43810 (R;US)
URANIUM MILLS
See FEED MATERIALS PLANTS

VANADIUM 51
Nuclear Radii
Nuclear sizes and densities of 1 fsub(7/2)-nuclei from pionic atoms and elastic scattering of α particles, 10:45695 (RA;DE)
VANADIUM 51 TARGET
Carbon 12 Reactions
Complete and incomplete fusion and pre-equilibrium emission in heavy ion reactions sharing the compound nucleus ^{63}Cu, 10:45616 (R;GB)
VANADIUM IONS
Ion-Molecule Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1984-March 15, 1985, 10:45350 (R;US)
VANADIUM MINERALS
See MINERALS
VAPOR DEPOSITED COATINGS
Fabrication
Preparation of ceramic fiber-ceramic matrix composites by a faster chemical vapor infiltration process, 10:44686 (R;US)
Flexural Strength
Preparation of ceramic fiber-ceramic matrix composites by a faster chemical vapor infiltration process, 10:44686 (R;US)
VAVILOV-CHERENKOV RADIATION
See CHERENKOV RADIATION
VECTOR DOMINANCE MODEL
Muon-Proton Interactions
Hard meson corrections to the radiative muon capture amplitude, 10:45478 (RA;DE)
VECTOR MESONS
Particle Production
[Studies of interactions between elementary particles and nuclei]. Progress report, 10:45420 (R;US)
VEGETABLE OILS
Prior to March 1983 this concept was indexed to PLANTS and OILS.
Fuel Substitution
Vegetable oil for diesels, 10:43923 (RA;US)
Refining
Vegetable oil for diesels, 10:43923 (RA;US)
VEGETATION
See PLANTS
VEHICLES
See also AUTOMOBILES; ELECTRIC-POWERED VEHICLES; SPACE VEHICLES
Internal Combustion Engines
Cost of selected trap-oxidizer system components for heavy-duty vehicles. Final report, 10:44573 (R;US)
VENTILATION DUCTS
See DUCTS

VENTILATION SYSTEMS
Fire Hazards
Fire simulation in nuclear facilities--the FIRAC code and supporting experiments, 10:43893 (RA;US)
Fire Prevention
Fire simulation in nuclear facilities--the FIRAC code and supporting experiments, 10:43893 (RA;US)
VERMONT
Energy Analysis
State Energy Overview 1983, 10:44506 (R;US)
VERMONT YANKEE REACTOR
Vernon, Vermont, USA
Primary Coolant Circuits
Effect of feedwater oxygen control at the Vermont Yankee BWR, 10:44210 (R;US)
Radioactivity Transport
Effect of feedwater oxygen control at the Vermont Yankee BWR, 10:44210 (R;US)
VERTICAL AXIS TURBINES
Air Flow
Investigation into the Darrieus wind turbines. Characteristics and performance of a troposkian in a stream tubes and flow expansion theory, 10:44149 (R;FR;In French)
Performance Testing
Investigation into the Darrieus wind turbines. Characteristics and performance of a troposkian in a stream tubes and flow expansion theory, 10:44149 (R;FR;In French)

GROUND WATER
HEAVY WATER
WASTE WATER

Decomposition
Photoeffects of semiconductor electrolyte interfaces. Final report, 1979-1984, 10:44821 (R;US)

Electron Transfer
Theoretical studies of electron and proton transfer processes in fluids. Progress report, August 1984-August 1985, 10:44772 (R;US)

Electron-Molecule Collisions
(e,2e) reactions on atoms and molecules, 10:45393 (RA;US)

Evaporation
Ignition and combustion of utility grind coal-water slurry in a lean, confined, turbulent diffusion flame, 10:43704 (R;US)

Labelling
Use of tritium-labelled water in the study of transfers and exchanges in Helianthus annuus, 10:45208 (R;FR;In French)

Molecular Structure
Scattering of electron-volt neutrons by light and heavy water, 10:45732 (RA;US)

Neutron Transport
Scattering of electron-volt neutrons by light and heavy water, 10:45732 (RA;US)

Oxidation
Photosynthetic water oxidation by green plants: on the role of protons, 10:44005 (R;XE)

Photochemical Reactions
Photoeffects of semiconductor electrolyte interfaces. Final report, 1979-1984, 10:44821 (R;US)

Photochemistry
Photochemical dissociation of water in colloidal clay suspensions, 10:44826 (R;XE)
Vectorial electron transfer on designed surfaces. Annual report, January 1984-January 1985, 10:44827 (R;US)

Photolysis
Photochemical dissociation of water in colloidal clay suspensions, 10:44826 (R;XE)

Radiation Monitoring
Environmental radioactivity at the National Nuclear Research Centre, Pelindaba. Report for the year 1983, 10:45178 (R;ZA)

Radioactivity
Environmental radioactivity at the National Nuclear Research Centre, Pelindaba. Report for the year 1983, 10:45178 (R;ZA)

Raman Spectroscopy
Raman spectroscopy of shocked water, 10:45410 (R;US)

Salinity
Salinity determination using NIRA, 10:44761 (J;US)

Shock Waves
Condensed matter at high shock pressures, 10:45401 (R;US)
Raman spectroscopy of shocked water, 10:45410 (R;US)

Sodium Chlorides
Salinity determination using NIRA, 10:44761 (J;US)

WATER COOLANT
See WATER

WATER COOLED REACTORS

PWR TYPE REACTORS

Loose Parts Monitoring
Characteristics and performance experience of loose-part monitoring systems in US commercial power reactors, 10:44293 (R;US)

Loss of Coolant
Investigation of the phenomena occurring within a multi-compartment containment after rupture of the primary cooling circuit in water cooled reactors, 10:44438 (TG;US)

Pipes
Piping inelastic fracture mechanics analysis, 10:44294 (R;US)

Pressure Vessels
Heavy-Section Steel Technology Program quarterly progress report, July-September 1980, 10:44296 (R;US)

Reactor Kinetics
Space and energy dependence of uranium 238 resonance capture rate in a heterogeneous lattice, 10:44283 (R;FR;In French)

Reactor Safety
Water Reactor Safety Research Division. Quarterly progress report, January 1-March 31, 1981, 10:44405 (R;US)
Water Reactor Safety Research Division quarterly progress report, January 1-March 31, 1980, 10:44378 (R;US)

Steam Generators
Steam generator tube performance. Experience with water-cooled nuclear power reactors during 1981, 10:44181 (R;CA)

WATER HEATERS
Integrated gas-fired space-heating/water-heating system with electric air conditioning. Annual report, January 1984-December 1984, 10:44550 (R;US)

Heat Pumps
Methods to improve the operating coefficient of performance of heat pump water heaters (Add-on type), 10:44524 (R;US)

Size
Methods to improve the operating coefficient of performance of heat pump water heaters (Add-on type), 10:44524 (R;US)

WATER MODERATOR
See WATER

WATER POLLUTION
Silver(I) ion complexation by carbonate and oxlate at 25°C, 10:44793 (J;CH)

Environmental Transport
Review of field-scale physical solute transport processes in saturated and unsaturated porous media. Final report, 10:45092 (R;US)

Information Needs
Design of field-scale experiments for research on subsurface transport of organic chemicals. Summary report , 10:45171 (R;US)

Meetings
Design of field-scale experiments for research on subsurface transport of organic chemicals. Summary report , 10:45171 (R;US)

WATER QUALITY
Sampling
State of the Middle Great Lakes: results of the 1983 water quality survey of Lakes Erie, Huron, and Michigan, 10:45185 (R;US)

WATER RESERVOIRS
Drawdown
Quantification of Libby Reservoir levels needed to maintain or enhance reservoir fisheries. Annual report, FY 1984, 10:43969 (R;US)

Environmental Effects
Wildlife impact assessment and summary of previous mitigation related to hydroelectric projects in Montana, Phase I. Volume IIA. Clark Fork projects: Thompson Falls Dam. Final report, 10:43957 (R;US)

WATER RESOURCES
Management
Yakima River Spring Chinook Enhancement Study. Annual report, FY 1984, 10:45189 (R;US)

WATER SOLUTIONS
See AQUEOUS SOLUTIONS

WATER TREATMENT
Pilot Plants
Pilot-scale development of anaerobic filter technology for municipal wastewater treatment, 10:45168 (R;US)

WATER VAPOR
Diffusion
Slip-flow experiments in welded tuff: the Knudsen diffusion problem, 10:43877 (R;US)

WATERBORNE PARTICLES
See PARTICULATES

WATERFLOODING
See also CAUSTIC FLOODING
Additives
Improved polymers for enhanced oil recovery: synthesis and rheology. Final report, 10:43718 (R;US)

WAVEGUIDES
Design
Design and construction of a mode converter from TE_{10}(rectangular) to TE_{11}(circular), 10:45027 (R;NL)
Fabrication
Design and construction of a mode converter from TE_{10}(rectangular) to TE_{11}(circular), 10:45027 (R;NL)

WEAK CHARGED CURRENTS
Leptonic Decay
Search for right-handed currents in muon decay, 10:45423 (RA;DE)
V-A Theory
V-A structure of the charged weak current of the tau lepton and the reaction $\gamma + N \rightarrow$ lsup(+-) + upsilonsub(l) + N', 10:45480 (RA;DE)
WEAK INTERACTIONS
Theory of weak interactions and related topics. Progress report, January 1, 1985-August 1, 1985, 10:45477 (R;US)
Theory of weak interactions and related topics. Progress report, January 1-December 31, 1980, 10:45472 (R;US)
Theory of weak interactions and related topics. Progress report, January 1-December 31, 1981, 10:45473 (R;US)
Theory of weak interactions and related topics. Progress report, January 1, 1982-February 28, 1983, 10:45474 (R;US)
Theory of weak interactions and related topics. Progress report, March 1-December 31, 1983, 10:45475 (R;US)
Theory of weak interactions and related topics. Progress report, January 1-December 31, 1984, 10:45476 (R;US)
Higgs Bosons
Two-loop large Higgs mass corrections to vector boson self-couplings, 10:45514 (R;NL)
Kaon Plus-Proton Interactions
Weak pion production with kaons, 10:45488 (RA;DE)
Symmetry
Who ordered the muon. From families to communities, 10:45464 (R;US)
T Invariance
Time-reversal-violating effects in semileptonic decays in SU(2)sub(L) x SU(2)sub(R) x U(1) electroweak models, 10:45481 (RA;DE)
WEAK NEUTRAL CURRENTS
Optical Activity
Influence of the weak electron-nucleus interaction on the electromagnetic waves propagation in media, 10:45483 (RA;DE)
WEAR RESISTANCE
Computer Codes
Computer-aided tube fretting-wear predictions (VIBIC code), 10:44892 (R;CA)
Computerized Simulation
Computer-aided tube fretting-wear predictions (VIBIC code), 10:44892 (R;CA)
WEATHERIZATION
Energy Conservation
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 10:44528 (R;US)
Financial Assistance
1982 HHS/LIHEAP funds used for weatherization. An analysis of data from twenty states: Task A. Final report, 10:44539 (R;US)
Monitoring
Revised grantee and subgrantee weatherization monitoring instruments and pre-tests. Final report. Tasks D and E, 10:44540 (R;US)
Transferable methods identified during the monitoring of the DOE Chicago Operations Office Weatherization Assistance Program. Final report. Task F, 10:44537 (R;US)
Procurement
Procurement practices in state and local agencies within the Department of Energy low income weatherization assistance program. Final report. Task C, 10:44536 (R;US)
Program Management
Analytic methodologies for program evaluation for the Department of Energy Low Income Weatherization Assistance Program, task B. Final report, 10:44538 (R;US)
Procurement practices in state and local agencies within the Department of Energy low income weatherization assistance program. Final report. Task C, 10:44536 (R;US)
Revised grantee and subgrantee weatherization monitoring instruments and pre-tests. Final report. Tasks D and E, 10:44540 (R;US)
Transferable methods identified during the monitoring of the DOE Chicago Operations Office Weatherization Assistance Program. Final report. Task F, 10:44537 (R;US)
WECS
See WIND TURBINES
WEINBERG LEPTON MODEL
Nucleon-Nucleon Interactions
Parity nonconserving electroweak effects in radiative nucleon-nucleon scattering, 10:45479 (RA;DE)
Photoproduction
V-A structure of the charged weak current of the tau lepton and the reaction $\gamma + N \rightarrow$ lsup(+-) + upsilonsub(l) + N', 10:45480 (RA;DE)
Symmetry Breaking
Electroweak gauge model without Higgs boson, 10:45482 (RA;DE)
WEINBERG MODEL
See WEINBERG LEPTON MODEL
WELDED JOINTS
Creep
Evaluation method of creep and fatigue strength for FBR welded joints, 10:44262 (RA;XA)
Failures
Seminar on dissimilar welds in fossil-fired boilers: proceedings (Often ferritic and austenitic steels), 10:44161 (R;US)
Fatigue
Evaluation method of creep and fatigue strength for FBR welded joints, 10:44262 (RA;XA)
Fracture Properties
Fracture toughness of Type 316 steel and weld metal, 10:44624 (RA;XA)
Nondestructive Testing
Seminar on dissimilar welds in fossil-fired boilers: proceedings (Often ferritic and austenitic steels), 10:44161 (R;US)
Physical Radiation Effects
Effects of low dose fast neutron irradiation on the fracture toughness of Type 316 stainless steel and weld metal, 10:44631 (RA;XA)
Reliability
Seminar on dissimilar welds in fossil-fired boilers: proceedings (Often ferritic and austenitic steels), 10:44161 (R;US)
WELDS
See WELDED JOINTS
WELL DRILLING
Data Base Management
Continental scientific drilling program data base - 1983, 10:45293 (RA;US)
Data Processing
Description and directions for use of the IAO computer code for the data processing of the geothermal drilling test. Version 1.0 for the R2E MICRAL 21D system, 10:44117 (R;FR;In French)
WELL LOGGING
See also GRAVITY LOGGING
SONIC LOGGING
TEMPERATURE LOGGING
Fractured igneous rock environment test pit results, 10:45294 (RA;US)
Frontiers for petrophysics and borehole log analysis, 10:43714 (RA;US)
Trace constituents in evaporites, 10:43872 (RA;US)
WELL LOGGING EQUIPMENT
To be used only when the equipment itself is the topic of the paper; includes source, detector, and associated equipment.
Downhole periodic seismic sources, 10:44123 (RA;US)
Operation
State-of-the-art: high-temperature logging, 10:44124 (RA;US)

Performance
Downhole measurement experiments and experiences in the deep sea drilling project, 10:43720 (RA;US)
Experimental basis for a new borehole corrected pulsed neutron capture logging system (TMD), 10:43712 (RA;US)
High resolution temperature logging probe, 10:43745 (RA;US)
High-temperature borehole instrumentation, 10:44126 (RA;US)
High temperature solid-state devices, 10:45046 (RA;US)
Modelling of fracture-generated tube waves in VSPs, 10:45304 (RA;US)
Scientific applications of BHTV and sonic logging, 10:45303 (RA;US)
State-of-the-art: high-temperature logging, 10:44124 (RA;US)

WELLMAN-LORD PROCESS

Remote Sensing
Remote sensing inland wetlands: a multispectral approach, 10:45181 (R;US)

WIGGLER MAGNETS
Magnetic Fields
CSEM-steel hybrid wiggler/undulator magnetic field studies, 10:44980 (R;US)

WILD ANIMALS
Population Dynamics
Wildlife impact assessment and mitigation summary: Montana Hydroelectric Projects. Volume III. Hungry Horse Dam. Final report (Elk; deer; black bear; grizzly bear; mountain lion; osprey; bald eagle; waterfowl; upland gamebirds; furbearers), 10:45186 (R;US)
Wildlife impact assessment and mitigation summary: Montana Hydroelectric Projects. Volume I. Libby Dam. Final report, 10:43956 (R;US)
Wildlife impact assessment and summary of previous mitigation related to hydroelectric projects in Montana. Phase 1. Volume Two(b). Clark Fork River Projects: Cabinet Gorge and Noxon Rapids Dams. Final report (Deer; elk; bear; lion; bobcat; otter; beaver; bald eagle; osprey; waterfowl), 10:45187 (R;US)
Research Programs
Status review of wildlife mitigation Columbia Basin hydroelectric projects. Columbia River mainstem facilities. Final report, 1984, 10:43965 (R;US)
Resource Conservation
Status review of wildlife mitigation Columbia Basin hydroelectric projects: Washington Facilities (Intrastrate). Final report, 10:43958 (R;US)

WIND
Complex Terrain
Finite-element formulation of a variational procedure of wind-field adjustment over complex terrain, 10:45075 (R;XE)

WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES

WIND GENERATORS
See WIND TURBINES

WIND POWER PLANTS
Design
Modification of a rotary or translational wind generator to increase its efficiency. Draft final report, 10:44142 (R;US)
Energy Source Development
Let's cash crop the fence row and the water flow, 10:44139 (RA;US)
Low-Head Hydroelectric Power Plants
Let's cash crop the fence row and the water flow, 10:44139 (RA;US)
Research Programs
Wind energy evaluation for the European Communities, 10:44148 (R;XE)
Surveys
Wind power stations: 1984 survey. Final report, 10:44147 (R;US)

WIND TURBINES
See also VERTICAL AXIS TURBINES
Accidents
Risk calculation for personal injuries in a windmill accident in case of a torn-off blade, 10:44146 (R;DK;In Danish)
Design
MOD-5B Wind Turbine System concept and preliminary design report. Volume I. Executive summary, 10:44140 (R;US)
MOD-5B Wind Turbine System concept and preliminary design report. Volume II. Detailed report, 10:44141 (R;US)
Power Range 10-100 kW
Power measurements on 15 kW REYMO wind turbine sited at Skodborg, South Jutland, 10:44151 (R;DK;In Danish)
Rotors
Dynamic analysis of wind turbine rotors for lifetime prediction, 10:44150 (R;DK)
Test Facilities
Power measurements on 15 kW REYMO wind turbine sited at Skodborg, South Jutland, 10:44151 (R;DK;In Danish)
Vertical Axis Turbines
Development of vertical axis wind turbines Darrieus type, 5m diameter, at Grenoble (France), 10:44138 (R;FR)

WINDOWS
Research Programs
Millimeter wave dielectric property measurement of gyrotron window materials. Technical report, January 26, 1983-October 31, 1984, 10:44915 (R;US)

WINDSCALE PRODUCTION REACTORS
Reactor Accidents
Health physics aspects of the Windscale accident (October 1957), 10:44424 (RA;IN)

WIPP
Pretest reference calculation for the Heated Axisymmetric Pillar (WIPP Room H in situ experiment), 10:43879 (R;US)
Planning
Planning, developing, and organizing in situ tests for the Waste Isolation Pilot Plant (WIPP), 10:43873 (R;US)
Research Programs
Waste Isolation Pilot Plant. Project progress report for quarter ending June 30, 1985, 10:43883 (R;US)
Testing
Planning, developing, and organizing in situ tests for the Waste Isolation Pilot Plant (WIPP), 10:43873 (R;US)

WIRES

Geothermal resources of the Wind River Basin, Wyoming, 10:44111 (R;US)
Geothermal resources of the Green River Basin, Wyoming, including thermal data for the Wyoming portion of the Thrust Belt, 10:44110 (R;US)

X

X RADIATION
Collisions
Introduction to electronic excitations, 10:45386 (RA;US)
Photoemission studies of mixed valent systems, 10:45390 (RA;US)
XENON
Electron-Atom Collisions
(e,2e) reactions on atoms and molecules, 10:45393 (RA;US)
XENON 136 REACTIONS
Deep Inelastic Heavy Ion Reactions
Unified model for dissipative heavy-ion collisions, 10:45684 (RA;DE)
X-RAY DETECTION
Semiconductor Detectors
Contribution to time resolved X-ray fluence and differential spectra measurement method improvement in 5-200 KeV range. Application to pulsed emission sources, 10:45043 (R;FR;In French)
X-RAY DIFFRACTION
Absorption
Absorption factor tables for x-ray and neutron scattering in cylindrical samples, 10:45718 (R;CA)
X-RAY RADIOGRAPHY
Digital Systems
Multiline digital radiographic imager study with synchronization to detector gas ion drift, 10:45016 (R;FR;In French)
Ionization Chambers
Multiline digital radiographic imager study with synchronization to detector gas ion drift, 10:45016 (R;FR;In French)
X-RAY SPECTRA
Cherenkov Radiation
Design consideration for the x-ray Cherenkov experiment. Master's thesis, 10:45038 (R;US)
X-RAY SPECTROMETERS
Computer Codes
Computer programmes for the control and data manipulation of a sequential x-ray-fluorescence spectrometer (The program X2 is used to control all functions of the spectrometer and CALGFS is the calculation program), 10:45022 (R;ZA)
Control
Computer programmes for the control and data manipulation of a sequential x-ray-fluorescence spectrometer (The program X2 is used to control all functions of the spectrometer and CALGFS is the calculation program), 10:45022 (R;ZA)
X-RAY SPECTROSCOPY
Semiconductor Detectors
Contribution to time resolved X-ray fluence and differential spectra measurement method improvement in 5-200 KeV range. Application to pulsed emission sources, 10:45043 (R;FR;In French)

Y

YAMS
Radiopreservation
Use of gamma radiation as a form of preservation of sweet potatoes. Quarterly progress report, 10:43917 (R;US)
YANKEE MAINE REACTOR
See MAINE YANKEE REACTOR
YANKEE VERMONT REACTOR
See VERMONT YANKEE REACTOR
YEELIRRIE DEPOSIT
Yeelirrie calcrete uranium deposit, Western Australia, 10:43780 (RA;XA)
YIELD (FISSION)
See FISSION YIELD
YOUNG DIAGRAM
SO Groups
Representations of OSp(M/n) and Young supertableaux, 10:45773 (R;FR)
SP Groups
Representations of OSp(M/n) and Young supertableaux, 10:45773 (R;FR)
YTTERBIUM 150
Proton Emission Decay
Proton radioactivity of ^{151}Lu and neighbouring nuclei, 10:45654 (RA;SU)
YTTERBIUM PHOSPHATES
Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
Raman Spectroscopy
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
X-Ray Diffraction
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
YTTRIUM 85
Energy-Level Transitions
Contributions to the study of nuclear reactions mechanism induced by heavy ions on intermediate mass nuclei, 10:45625 (R;RO;In Romanian)
YTTRIUM 86
Energy-Level Transitions
Contributions to the study of nuclear reactions mechanism induced by heavy ions on intermediate mass nuclei, 10:45625 (R;RO;In Romanian)
YTTRIUM 89 TARGET
Helium 3 Reactions
Δ resonance excitation in nuclei by (^{3}He,t) reactions, 10:45700 (RA;DE)
Zirconium 90 Reactions
Cold fusion in symmetric ^{90}Zr induced reactions, 10:45629 (R;DE;In German)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM HYDRIDES
Electronic Structure
Paramagnetic impurity effects in nuclear magnetic resonance determinations of hydrogen diffusion and electronic structure in metal hydrides: cerium in YH_2, 10:44681 (J;CH)
Spin-Lattice Relaxation
Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of scandium, yttrium, lanthanum and lutetium, 10:44680 (J;CH)
YTTRIUM OXIDES
Physical Radiation Effects
Influence of high energetic irradiations with heavy ions on the magnetic properties of ferrimagnetic iron granates, 10:44667 (R;DE;In German)
YTTRIUM PHOSPHATES
Activation Analysis
Raman spectroscopy of polymorphic orthophosphates containing sodium and lanthanide elements, 10:44786 (J;US)
Crystal Field
Observation by EPR of trivalent hafnium in $LuPO_4$, YPO_4, and $ScPO_4$, 10:44725 (J;US)

Z

ZED-2 REACTOR
Activation Analysis
Detailed neutron activation measurements in lattices with 31-element PuOsub(2)-UOsub(2) clusters of simulated burned-up natural uranium fuel in heavy water moderator, 10:44245 (R;CA)
Mixed Oxide Fuels
Experiments performed in ZED-2 in support of the irradiation of $(Th,Pu)O_2$ fuel (BDL-422) in NRU, 10:44246 (R;CA)
Reactivity Worths
Experiments performed in ZED-2 in support of the irradiation of $(Th,Pu)O_2$ fuel (BDL-422) in NRU, 10:44246 (R;CA)
Reactor Lattices
Detailed neutron activation measurements in lattices with 31-element PuOsub(2)-UOsub(2) clusters of simulated burned-up natural uranium fuel in heavy water moderator, 10:44245 (R;CA)
ZEOLITES
Permeability
Nuclear Technology Programs. Quarterly progress report, October-December 1984, 10:43887 (R;US)
ZINC 64
Collective Model
Competition between collective and single particle excitations in nuclear structure description, 10:45623 (R;RO;In Romanian)
ZINC 66
Collective Model
Competition between collective and single particle excitations in nuclear structure description, 10:45623 (R;RO;In Romanian)
Spherical Model
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
Strength Functions
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
ZINC 66 TARGET
Proton Reactions
Intermediate processes in nuclear reactions, 10:45624 (R;RO;In Romanian)
ZINC OXIDES
Catalytic Effects
Development of a combined NO/sub x/SO_2 removal system based on ZnO scrubbing technology. Fourteenth monthly technical progress report, July 1-July 31, 1985, 10:43655 (R;US)
ZINC SULFIDES
Catalytic Effects
Vectorial electron transfer on designed surfaces. Annual report, January 1984-January 1985, 10:44827 (R;US)
ZINC TELLURIDES
Crystal Growth
Low temperature synthesis of pseudobinary chalcogenides, 10:44711 (RA;IL)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION STATION UNIT-2
See ZION-2 REACTOR
ZION-1 REACTOR
Zion, Illinois, USA
Blowdown
PWR loss-of-coolant accident analysis capability of the WRAP-EM system, 10:44383 (R;US)

ZION-2 REACTOR
Zion, Illinois, USA
Blowdown
PWR loss-of-coolant accident analysis capability of the WRAP-EM system, 10:44383 (R;US)
ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 2
ZIRCALOY 4
Calibration Standards
Preparation of zirconium and zirconium-base alloy certified reference materials JAERI-Z11 to -Z18, 10:44634 (R;JP;In Japanese)
Chemical Reactions
Temperature escalation in PWR fuel rod simulators due to the zircaloy/steam reaction ESSI-4 ESSI-11, 10:44360 (R;DE)
Corrosion
In-reactor corrosion and crud deposition data on Fragema fuel, 10:44190 (RA;US)
Relation between autoclave tests and in-reactor corrosion measurement results for Zircaloy, 10:44192 (RA;US)
Zircaloy cladding corrosion degradation in a tuff repository. Initial experimental plan. Revision 1, 10:44603 (R;US)
Deformation
Multirod Burst Test Program. Progress report, July-December 1980, 10:44395 (R;US)
Fracture Properties
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
Physical Radiation Effects
Fracture behavior and microstructural characteristics of irradiated Zircaloy cladding, 10:44183 (R;US)
ZIRCALOY 2
Corrosion
Spent fuel cladding corrosion under tuff repository conditions: initial observations, 10:44644 (R;US)
Stress Corrosion
Spent fuel cladding corrosion under tuff repository conditions: initial observations, 10:44644 (R;US)
ZIRCALOY 4
Corrosion
Corrosion and hydriding of Zircaloy fuel rod cladding in 633K water and reactor environments, 10:44189 (RA;US)
Spent fuel cladding corrosion under tuff repository conditions: initial observations, 10:44644 (R;US)
Crack Propagation
Investigations of crack initiation during environmentally induced cracking of the Zircaloys, 10:44335 (R;CA)
Deformation
Factors influencing deformation and wall thickness of fuel rods under a loss-of-coolant accident, 10:44441 (TG;US)
Embrittlement
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Hydridation
Corrosion and hydriding of Zircaloy fuel rod cladding in 633K water and reactor environments, 10:44189 (RA;US)
Oxidation
Behavior of the Zircaloy cladding tube in a mixed gas of hydrogen and steam, 10:44440 (TG;US)
Oxidation of Zircaloy-4 in steam at 1300 to 2400°C, 10:44640 (R;US)
Zircaloy steam reaction and embrittlement of the oxidized zircaloy tube under postulated loss of coolant accident conditions. (Oxidation kinetics and embrittlement of zircaloy at above 1200°C), 10:44417 (R;US)
Strains
Study of the effect of circumferential temperature variations on fuel-sheath strain in an inert atmosphere, 10:44300 (R;CA)
Stress Corrosion
Spent fuel cladding corrosion under tuff repository conditions: initial observations, 10:44644 (R;US)
ZIRCONIUM
Electrometallurgy
Purification of zirconium by electrotransport, 10:44580 (R;CA)
Gas Tungsten-Arc Welding
Zirconium fabrication and junction between zirconium or titanium and stainless steel, 10:44585 (R;FR;In French)
Magnetic Properties
Paramagnetic form factors of HCP transition metals, 10:44592 (R;US)
Neutron Reactions
Total neutron cross sections of magnesium, aluminum, silicon, zirconium, niobium and molybdenum in the thermal range, 10:45612 (RA;JP;In Japanese)
Purification
Purification of zirconium by electrotransport, 10:44580 (R;CA)
Solubility
Behavior and mechanism of sorption of uranylperoxocarbonato-complexes on anion exchanger systems, 10:44845 (R;DE;In German)
Welding
Zirconium fabrication and junction between zirconium or titanium and stainless steel, 10:44585 (R;FR;In French)
ZIRCONIUM 88
Spherical Model
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
Strength Functions
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
ZIRCONIUM 90
Energy Levels
Excitation of states with a different lambdasup(π) in the inelastic electron scattering at backward angles, 10:45644 (R;SU)
Excited States
Transversal E1-resonance in spherical nuclei, 10:45619 (R;SU;In Russian)
ZIRCONIUM 90 REACTIONS
Capture
Cold fusion in symmetric ^{90}Zr induced reactions, 10:45629 (R;DE;In German)
Heavy Ion Fusion Reactions
Cold fusion in symmetric ^{90}Zr induced reactions, 10:45629 (R;DE;In German)
ZIRCONIUM 90 TARGET
Electron Reactions
Excitation of states with a different lambdasup(π) in the inelastic electron scattering at backward angles, 10:45644 (R;SU)
Zirconium 90 Reactions
Cold fusion in symmetric ^{90}Zr induced reactions, 10:45629 (R;DE;In German)
ZIRCONIUM 91 TARGET
Neutron Reactions
Accurate determination of the parameters of the 292.4-eV resonance of ^{91}Zr and the 301.1-eV resonance of ^{96}Zr, 10:45628 (R;US)
ZIRCONIUM 92
Spherical Model
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
Strength Functions
Fragmentation of two-quasiparticle states in some spherical nuclei, 10:45646 (R;SU)
ZIRCONIUM 92 TARGET
Zirconium 90 Reactions
Cold fusion in symmetric ^{90}Zr induced reactions, 10:45629 (R;DE;In German)
ZIRCONIUM 96 TARGET
Neutron Reactions
Accurate determination of the parameters of the 292.4-eV resonance of ^{91}Zr and the 301.1-eV resonance of ^{96}Zr, 10:45628 (R;US)
Zirconium 90 Reactions
Cold fusion in symmetric ^{90}Zr induced reactions, 10:45629 (R;DE;In German)

ZIRCONIUM ADDITIONS
Metallurgical Effects
Armor - preliminary study of the effect of several alloying elements and addition agents upon the metallurgical properties of manganese-molybdenum steel used in armor, 10:44579 (R;US)

ZIRCONIUM ALLOYS
See also ALLOY-TZM
ZIRCONIUM ADDITIONS
ZIRCONIUM BASE ALLOYS
Calibration Standards
Preparation of zirconium and zirconium-base alloy certified reference materials JAERI-Z11 to -Z18, 10:44634 (R;JP;In Japanese)

ZIRCONIUM BASE ALLOYS
See also ZIRCALOY
Extrusion
Final report on development evaluation of Task Group 3 pressure tubes, 10:44251 (R;CA)

ZIRCONIUM HYDRIDES
Electronic Structure
Electronic structure of γ phase zirconium hydride, 10:44683 (J;CH)
Self-consistent band structure calculations of titanium, zirconium and hafnium dihydrides, 10:44684 (J;CH)
Neutron Transport
Momentum distribution of light atoms by deep inelastic neutron scattering, 10:45730 (RA;US)
Tetragonal Lattices
Electronic structure of γ phase zirconium hydride, 10:44683 (J;CH)

ZIRCONIUM ISOTOPES
See also ZIRCONIUM 88
ZIRCONIUM 90
ZIRCONIUM 92
Isotope Separation
Isotope enrichment in zirconium with a plasma centrifuge. Final report on contract CR31-3946, 10:43913 (R;CA)

ZIRCONOLITE
Annealing
EXAFS studies of metamict materials, 10:44703 (R;US)
Fourier Transformation
EXAFS studies of metamict materials, 10:44703 (R;US)
Fracture Properties
Radiation effects in actinide host phases, 10:43867 (R;US)
Physical Radiation Effects
EXAFS studies of metamict materials, 10:44703 (R;US)
Radiation effects in actinide host phases, 10:43867 (R;US)

ZT-40 DEVICES
Limiters
Evaluation of limiter configurations in ZT-40M, 10:45880 (J;NL)
Reverse-Field Pinch
Hybrid-kinetic simulation of the generation of mass flow due to plasma-wall interaction in reversed-field pinches, 10:45807 (J;GB)
Wall Effects
Hybrid-kinetic simulation of the generation of mass flow due to plasma-wall interaction in reversed-field pinches, 10:45807 (J;GB)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AA03-76SF00034	**California Univ., Los Angeles (USA**	
	10:45864	Journal of Nuclear Materials 128/129 249-252 (Dec 1984).

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form, DE82000001 or TI82000001, appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 5 to 8% illegibility, available PC and MF; 2 = 9 to 12% illegibility, available MF only; 3 = 13% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($4.50).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE					
A01	$4.50	E01	$6.50	T01	$125.00

National Technical Information Service
5285 Port Royal Road, Springfield, Virginia 22161

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., DA83-22350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

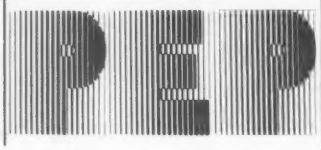
PERSONAL ENERGY PROFILE (PEP)

COMPUTER SEARCH SERVICE



PEP is a customized computer search service provided to DOE and contractor personnel on DOE/RECON (the Department's interactive on-line information retrieval system). For others, these selective dissemination-of-information services are available on commercial on-line systems. PEP automatically supplies the latest information in your field of interest by searching any of the regularly updated data bases in DOE/RECON twice a month, printing out the new bibliographic entries defined by your particular search, and mailing the update to you.

A search strategy is custom designed for each PEP subscriber so that each person's unique information needs are met. Your library and the scientific specialists at the Office of Scientific and Technical Information work with you to design a suitable search. Once the PEP service has been established, the search is automatically executed twice a month, and the results—provided in computer printout form—are mailed to you.

To obtain additional information about the specifics of subscribing to the PEP search service, or for examples of PEP search results, contact the library at your facility. If you do not have a library at your facility, contact
